BHANDARKAR ORIENTAL RESEARCH INSTITUTE, POONA.—The Institute was inaugurated on the 6th of July 1917, the 80th birthday of late Sir R. G. Bhandarkar, at the hands of H. E. Lord Willingdon, who became its first President. Its objects are to publish critical editions of texts and original works bearing on Oriental Antiquities, to provide an up-to-date Oriental Library, to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. The valuable library of the late Dr. Sir R. G Bhandarkar which he had bequeathed already to the Institute was handed over after his demise by his executors to the Institute and is now located in the Central Hall of the Institute. Since the 1st of April 1918 the Government of Bombay have transferred to the Institute the unique collection of manuscripts at the Deccan College together with a maintenance grant of Rs. 3,000 a year. Government have likewise entrusted to the Institute a grant of Rs. 12,000 a year for the publication of the Government Oriental Series The Institute has undertaken to edit the *Mahabharata* critically at the request of the Chief of Aundh who has promised a grant of Rs. 5,000 annually for that purpose. Grants are being received from the University of Bombay, and the Governments of Burma Baroda and Madras. The Institute has a journal called "Annals of the Bhandarkar Institute" published four times a year. It also held under its auspices the First Oriental Conference on the 5th, 6th and 7th of November 1919 under the patronage of H. E. Sir George Lloyd and the presidency of Sir R G Bhandarkar. Owing to liberal donations from the Tatas and the Jain community, the Institute is housed in a fine building near the hills behind the Home of the Servants of India Society. Minimum membership dues Rs. 10 a year or Rs. 100 compounded for life Members can borrow books from the library and get the Journal free and other publications at concession rates. *Secretary*: Dr S K. Belvalkar, M A., PH.D. (Haward).

BOMBAY ART SOCIETY.—Founded 1888; to promote and encourage Art by exhibitions of Pictures and Applied Arts, and to assist in the establishment and maintenance of a permanent gallery for pictures and other works of Art. The Society has a membership of about 1,700 and a museum with a representative collection of the different vertebrates and invertebrates found in the Indian Empire and Ceylon In 1921 the Society was entrusted with the management of the Natural History Section of the Prince of Wales Museum, and a great part of the Society's collections have been transferred to that Museum. A Journal is published quarterly which contains articles on natural history and sport as well as descriptions of new species and local lists of different orders. In the more recent numbers, serial articles on game birds, common snakes, and common butterflies have been appearing. Annual subscription Rs 25 Entrance fee Rs. 20. *Patrons*, H. E The Viceroy of India. H. R. H. the Prince of

Wales; *Vice-Patron*, H. H. The Maharao of Cutch, G.C.S.I., G.C.I.E.; H. H. the Maharaja of Jodhpur, K.C.S.I., K.C.V.O., H. H. the Maharaja of Rewa, K.C.S.I., H. H. the Maharani of Dhar; and Mr. F. V. Evans, Liverpool; *President*, H. E. The Rt. Hon. Sir Leslie Wilson, P.C., G.C.I.E., C.M.G., D.S.O.; *Vice-Presidents*, The Hon. Mr. J. E. B. Hotson, C.S.I., I.C.S., and H. H. the Maharao of Cutch, G.C.S.I., G.C.I.E., Rev. E. Blatter, S.J., Ph.D., F.L.S.; *Honorary Secretary*, Sir Reginald Spence, Kt., F.Z.S.; *Curator*, S. H. Prater, C.M.Z.S., *Asst. Curator*, C. A. McCann; *Head Clerk*, Mr. A. F. Fernandes; Offices: 6, Apollo Street, Bombay.

BRITISH AND FOREIGN BIBLE SOCIETY.—Since 1811 the British and Foreign Bible Society has been at work in this country It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta, in 1811, then followed the Bombay Auxiliary in 1813, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, the Bangalore Auxiliary in 1875, while the Burma Agency was founded in 1899. The Bible or some portion of it is now to be had in nearly 100 different Indian languages and dialects and the circulation throughout India and Burma reached nearly 8,00,000 copies in 1924. The Bibles, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Grants of English Scriptures are made to Students who pass University examinations, as under:—

The New Testament and Psalms to Matriculates.

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the National Bible Society of Scotland, the American Bible Society and the Tranquebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma:—

TABLE OF *CIRCULATION OF THE* B.F.B.S. IN INDIA.

Auxiliaries.	1925.	1924.	1923.	1922.
Calcutta	122,781	107,084	148,026	111,567

Meldrum (Royal Institute of Science). Bombay Branch of the Indian Chemical Society. *President* : Dr. A. N. Meldrum ; *Vice-Presidents* : Dr. A. B. Normand and Rev. Fr. J. F. Caius *Joint Secretaries* : Dr. Mata Prasad and Mr. R. N. Bhagvat. *Treasurer* : K. B. Dr. A. K. Turner, *Members of the Executive Committee* : Dr. S. A. Kamat, Dr. N. F. Vajifdar and Mr. E. J. M. Hudson.

INDIAN INSTITUTE OF POLITICAL AND SOCIAL SCIENCE.—Founded on 30th March 1917 to promote a systematic study of political and social science in general and Indian political and social problems in particular in all their aspects taking the terms 'political' and 'social' in their widest sense, to organise free and well-informed discussions on current political and social topics as well as on abstract political and social questions ; to formulate considered views on current political and social questions ; to publish literature and make representations from time to time on questions arising or necessary to be raised

in the interest of the public; and to form and maintain a library for the promotion of the above objects. Office: Servants of India Society, Sandhurst Road, Girgaum, Bombay President, K. Natarajan, Esq., B.A., Secretaries, Dr. B. R. Ambedkar, D Sc. (Econ), London, Bar-at-Law, and Mr. C. S. Deole, B A.

INDIAN MATHEMATICAL SOCIETY.—Founded in 1907 for the advancement of Mathematical studies in India. It conducts a bi-monthly journal in which papers on mathematical subjects are published and maintains a library with current mathematical periodicals in all languages and new books on the subject. The library is located in the Fergusson College, Poona, whence the journals and books are circulated to members by post. The journal of the Society is published in Madras. There are about 225 members from all parts of India. *President*, V. Ramaswami Aiyar, M A., Deputy Collector, Chittoor. *Secretaries*, Prof. M. T. Naraniengar, Bangalore and Prin. N M. Shah, Poona. *Librarian*, Prof. Naik, Poona.

INDIAN SOCIETY OF ORIENTAL ART (Calcutta.)—*President*, Sir Rajendra Nath Mookerjee, K C.I.E; *Vice-President*, Mr. O. C. Gangoly, Solicitor, Editor "*Rupam*"; *Joint Hon. Secretaries*, C. W. E. Cotton, and G. N. Tagore; *Assistant Secretary*, P Chatterjee, *Hon Treasurer*, Rai Fanindra Lal De, Bahadur. *Office*—6A, Corporation Street, Hindusthan Buildings, First-floor, Calcutta.

INDIA SUNDAY SCHOOL UNION.—The India Sunday School is an interdenominational organisation having as its object the establishment and strengthening of Christian Sunday Schools throughout the Indian Empire. It embraces a number of Auxiliaries, which are generally associated with particular language areas. Both in the local Unions and in the Central organisation, help is given by foreign and Indian workers of almost all denominations.

The I. S. S. U. was founded in Allahabad in 1876, and reorganised in 1922. Its General Committee is made up of the officers, representatives of the National Christian Council, the Auxiliary Unions, and the World's Sunday School Association, and workers in India appointed by the W. S. S. A. Funds are liberally provided for the support of by the British Committee of the W S. S. A. and by the International Bible Reading Association. The Headquarters of the Union is in Coonoor A Teacher Training Institution was opened in 1926, in Coonoor, Nilgiris.

The chief activities of the Union are—(1) The publication and sale of literature in English and various vernaculars, dealing with child study, religious training, lesson courses and teacher's helps. (2) The training of teachers by means of lecture courses and help in private study. (3) The arrangement of examinations in English and vernaculars in connection with the various courses provided, for which certificates, medals and Scripture awards are given. (4) The encouragement of Daily Bible Reading as an aid to the spiritual life. (5) The encouragement of teachers and other workers by means of conventions and conferences in connec[illegible] The Teacher Traini[illegible] hands of Mr E. A.[illegible] Coonoor.

The Union publishes the following quarterly periodicals in English:—

Notes for Teachers of Junior Scholars on the Brit. International Course; Notes for Teachers of Senior Scholars on the Amer. International Course: and a Journal for Teachers containing reports, articles and reviews.

Approximately 15,000 schools, with 600 000 scholars and 20,000 teachers, are touched by these activities.

The Officers of the Union are—*President* Bishop J. W. Robinson, M.E., Church, Delhi *Treasurer*, W D. Warren, Madras; *General Secretary*, E. A. Annett, Coonoor.

INSTITUTION OF ENGINEERS (INDIA).—The organisation of the Institution commenced in 1919 and it was inaugurated by H. E. Lord Chelmsford early in 1921. Its object is to promote and advance the science, practice and business of engineering in India on the same lines as are adopted by the Institutions of Civil, Mechanical and Electrical Engineers in the United Kingdom. The standard of qualification is the same. Membership is divided into three classes, *viz.*, Members, Associate Members and Associates, and there is an additional class for students. *President*, W H. Neilson, O.B.E., V.D., *Secretary*, F. Powell Williams. *Offices*—8, Esplanade Row, East P. O Box 669, Calcutta.

MADRAS FINE ARTS SOCIETY.—*Patron*, H. E the Rt. Hon. Viscount Goschen; *President* The Hon. Mr. Justice E. H. Wallace; *Secretary*, W Erlam Smith. Presidency College Madras.

MADRAS LITERARY SOCIETY AND AUXILIARY OF THE ROYAL ASIATIC SOCIETY.—*Secretary*, G. W. Bromhead, Esq., "Ardesley," High Road, Nungam Bakam.

NATIONAL HORSE BREEDING AND SHOW SOCIETY OF INDIA.—Formed in 1923. E. The Viceroy; *President* Colonel E. Hearle Cole, C.B., C.M.G., Coleyana Montgomery District, Punjab; *Secretary* Major-General Sir Bernard James, C B., C.I.E., M.V.O. *Registered Office*—Remount Camp, Kingsway, Delhi.

NATIONAL INDIAN ASSOCIATION.—Founded in 1870. Its objects are:—(*a*) To extend in England, knowledge of India, and interest in the people of that country. (*b*) To co-operate with all efforts made for advancing Education and Social reform in India. (*c*) To promote friendly intercourse between English people and the people of India. In all the proceedings

of the Association the principle of non-interference in religion and avoidance of political controversy is strictly maintained. It has branches in Bombay, Madras, Ahmedabad, Nagpur, Calcutta, Rangpur and Lahore. *Hon. Secretary*, Miss Beck, 21, Cromwell-road, London. Publication, *The Indian Magazine and Review*, a monthly Journal which chronicles the doings of the Association in England and in India, and takes note of movements for educational and social progress It publishes articles about the East to interest Western readers, and articles about the West to interest readers in the East. *Life Members*—Ten [illegible]: Members, one [illegible] shillings; A so[illegible] and Six pence.

PASSENGERS' AND TRAFFIC RELIEF ASSOCIATION. (Established in 1915). *Head Office*—139, Medows Street, Fort, Bombay. Objects: (*a*) To inquire into and ascertain grievances with respect to passengers in India generally. (*b*) To [illegible] local bodies, Railway [illegible] companies carryin[illegible] to take all proper [illegible] obtain redress with regard to the said grievances. (*c*) To hold periodical meetings and discuss questions relating to grievances. (*d*) To start branch offices throughout India, and to affiliate societies and bodies having objects similar to this Association. (*e*) To start a fund to meet expenses for carrying out the objects of the Association. *President*—Meyer Nissim Esquire, M.A., *Vice-Presidents*—J. R. Tairsee, Esquire, B.A., Lachmandas Daga, Esquire. *Hon. Secretaries*—Jivraj G. Nensey, Esquire, Khan Bahadur P. E. Ghamat. *Assistant Secretary*—Pestonji Jamsetji, Esquire.

PHILATELIC SOCIETY OF INDIA.—Formed March 1897; Annual subscription Rs. 15. *Secretary*: Jno. Godinho, 15, Burrow's Street, Bombay

PHOTOGRAPHIC SOCIETY OF INDIA (Calcutta).—Annual subscription Rs. 30 (Town Members) and Rs. 15 (Mofussil members). Entrance fee Rs. 20 and Rs. 10. The Society is affiliated to the Royal Photographic Society of Great Britain, London and holds annual exhibitions distributes a monthly journal to members, and undertakes developing, printing and enlarging work from its members only. There are excellent work-rooms apparatus and reading room at the Society's Head-quarters at 229, Lower Circular Road, Calcutta. *Hon. Secretary*: A. Hearn, 229, Lower Circular Road, Calcutta.

POONA SEVA SADAN SOCIETY.—This Institution was started in 1909 by the late Mrs. Ramabai Ranade, Mr. G. K. Devadhar and a few other ladies and gentlemen in Poona and registered in 1917. It is now working independently though for a few years in the beginning it was conducted as a branch of the Bombay Seva Sadan. Its main object is to make women self-reliant and to train them for missionary work undertaking educational and medical activities for their sisters and brethren, especially the former in backward areas and working on a non-sectarian basis. Nominal fees are being charged for except for the Music Classes, for Special Classes in English, and fo High School classes etc There are eight different departments subdivided into 57 classes, arrangements are made for training Nurses and Midwives and women Sub-Assistant Surgeons at the Sassoon Hospital, Poona, and a hostel is maintained for the former and two for those attending the Sub Assistant Surgeon's Classes. The number in these three hostels is now about 85 to 90. Besides there is a full-fledged Training College named after Bai Motlibai Wadia with about 61 students for being trained as Mistresses for Vernacular schools. This College is probably the only college in India maintained by a non-official, non-Christian missionary body teaching the full course The results of the Certificate Examinations held in the year 1926-27 under the authority of the local Government Training College for Women were as follows old II year 13, and I year senior 2. The total number of certificates granted so far is 335 now. The Practising School for little girls attached to the Training College has now eleven classes with 203 students reading up to the Marathi VI Standard, English being taught in the top three standards. Primary Classes for grown up women teaching up to the Marathi V Standard are attended by about 150 women. It is here that poor women are recruited for training as a teacher, nurse, midwife, or doctor. Special classes for teaching English, First Aid, Home Nursing were attended by about 60 students; the Music Classes by 113 students, and the Work-room Classes for teaching Sewing, Embroidery, Hosiery and Weaving by 155 women. Thus the total number of pupils is 908 to-day There are two branches of the Society started at Satara and Baramati which named after Lady Vithaldas Thakersey, the wife of the greatest helper of the Society so far, the late Sir Vithaldas D. Thakersey. Besides there are branches started at Bombay, Sholapur Ahmednagar, Alibag, Nasik Nagpur, Gwalior for either educational or medical work or for both. Thus the total number of women and girls including 150 duplications on the rolls at these various Centres of the Society is nearly 1,419. There are in Poona six hostels, three of which are located at the headquarters and the other three in the Raste's Peth and the Somwar Peth for Nurses, etc., under training at the Sassoon Hospital. The number of resident students is above 250 in these six hostels. One of the three hostels at the [illegible] is intended for women of depresse[illegible] of these women at pres[illegible] with the medical branch a Committee has been formed in England, which will enable the Society to send fully qualified Nurses there to undergo further training. There is an active Infant Welfare centre and ante-natal clinics with the average daily attendance of 50 excluding expectant mothers. The Society is extending its medical activities by undertaking, with the help of two charitable Trusts in Bombay to work out the scheme of Maternity, Infant Welfare, Child Welfare and General nursing for the women and children of the Bhatia Community under the supervision of Mr. G. K. [illegible] the organiser of the scheme. This

scheme has a Maternity Hospital and Nursing Home, and three Infant Welfare centres. Besides, these Maternity Hospitals and Nursing Homes at Ahmednagar and Alibag under the management of the society in connection with other organizations. Now Her Excellency the Countess of Reading, Lady Wilson, Lady Lloyd, Lady Willingdon, Lady Sydenham and Lady Chelmsford are Hon. Patronesses. The institution is largely dependent upon public contributions and Government assistance. The annual expenditure roughly comes up now to Rs. 2,50,000 *President*: Shrimant Soubhagyavati the Ranisaheb of Sangli; *Honorary Organiser and General Secretary*: Mr. Gopal Krishna Devadhar, M.A., C.I.E.; *Local Secretary and Treasurer*: Mrs. Yamunabai Bhat; *Lady Superintendent and Secretary for Development and Collections*: Mrs Janakibai Bhat (Kaiser-i-Hind Silver Medal; *Hon: Secretary, Nursing and Medical Education Committee*: Rao Bahadur Dr. P. V. Shikhhare, L.M. & S. (on leave). Dr. V. C. Gokhale, L.M. & S. and Dr. N. L. Ranade, B.A., M.B.B.S. (acting).

PRESS-OWNERS' ASSOCIATION, Bombay—Started on 30th April 1919 to promote the interests of the printing and litho presses and allied trades, to bring about harmony and co-operation among press owners and proprietors and to take such steps as may be necessary in furtherance of the above objects.

Office:—Servants of India Society, Sandhurst Road, Bombay 4.

President:—Shet Pandurang Javjee.

Secretaries:—Mr. C. S. Deole, B.A. and Mr. Manilal C. Modi.

RANGOON LITERARY SOCIETY.—*President*, H.E. The Governor of Burma. *Hon. Secretary*, Mrs. C. Peacock, 17, York Road.

RECREATION CLUB INSTITUTE.—This Institution was started in 1912-13 by the members of the Ismaily Dharmic (religious) Library in Bombay. Its central office is in Bombay with branches at Ahmedabad, Ahmednagar, Karachi, Hyderabad (Sindh), Poona, Warangal, etc. The aims and objects of the society are to elevate and improve the social, economic and spiritual condition of the depressed and poor classes of people and with that intent to found primary schools, associations and such departments and to take all constructive means to achieve the above objects. The Institute has 2 orphanages with 150 inmates, industrial works, domestic industries, sales depots, Clubs, Libraries, etc. It also issues two Anglo-Vernacular papers, The *Ismaily* (a weekly) and The *Nurani* (a monthly). *Hon. Secretary*, Mr. Hasan Lalji Devraj.

ROYAL SOCIETY OF ARTS, INDIAN SECTION.—This Society was founded in London in 1754. Its recently published history by Sir Henry Trueman Wood, late Secretary of the Society, gives the following account of the Indian Section. In 1857, a proposition was made by Mr. Hyde Clarke, who wrote to the Council suggesting that "a special section be formed for India, another for Australia, one for English, America and so on." It was suggested that the Indian Section should meet once a fortnight for the reading of papers. Nothing came of the suggestion until ten years later when Mr Hyde Clarke returned to England, and in 1868 he renewed his proposal, but only proposing the formation of a Committee which should organise conferences on Indian subjects. This time the suggestion was taken up more warmly. Mr. Hyde Clarke himself was placed on the Council, and the Indian Conferences, which soon developed into the Indian Section, were started. "The Indian Section thus established became a most important department of the Society It has had great results in India by spreading information as to the directions which the development of Indian manufactures and Indian products could most usefully take, and in England by giving similar information as to the industrial resources and progress of India itself. The Section has received great help from the Indian press and it has in return been of service to the Indian press in supplying useful information to it It has been of great value to the Society itself as the means by which many members have been added to its list, so that in fact, thanks to a very large extent to the work of [illegible] of the allied section for [illegible] proportion of the pre[illegible] come from the dependencies of the Empire abroad." *Secretary of the Society*: G. K. Menzies, M.A.; *Secretary of the Indian and Dominions and Colonies Sections*: W. Perry, B.A., I.C.S. (retired) 18, John Street, Adelphi, London, W. C. 2.

SERVANTS OF INDIA SOCIETY.—The Servants of India Society which was founded by the late Mr. Gopal Krishna Gokhale, C.I.E., in 1905, has its Head-quarters in Poona and its objects are "to train national missionaries for the service of India and to promote by all constitutional means the true interests of the Indian people." Its government is vested in the First member or President and a Council. On the death of Mr. Gokhale in February, 1915, the Right Hon'ble Mr. V. S. Srinivasa Sastri was elected President and continues to hold the office being duly re-elected thrice. Besides the headquarters, it has at present four branches, *viz.*, (1) in Bombay, (2) in Madras, (3) in the United Provinces, (4) in the Central Provinces. Moreover, it has several additional centres of its activities under the branches such as, Calicut, Mangalore, Lucknow, Lahore and Cuttack in Orissa. Each Branch consists of ordinary members, members under training and permanent assistants who work under the direction of a Senior Member. Mr. N. M. Joshi, a nominated member of the Legislative Assembly, representing labour interests. The branches engage both in propagandist and active work of political, educational, social, rural credit co-operative and philanthropic character in which they secure the help of a large number of voluntary workers, both men and women. A fair idea of the work of a branch can be had from a brief description of the operations of the Bombay Branch whose members

have so far undertaken activities in various fields. (1) Social purity like the Holika Sammelan of Bombay, (2) Social reform organization under the auspices of the Indian National Social Conference, (3) rousing public opinion about elementary education, (4) promotion of the cause of elevation and education of Indian women by building up institutions like the Poona Seva Sadan, with 1,095 (including duplications of about 150) women and girl pupils in nearly 53 classes of its 8 departments and five hostels in the city. Mr. G. K. Devadhar, M.A., is its Hon. Organiser and General Secretary. (5) Social service as carried out by the Social Service League of Bombay of which Mr. N. M. Joshi, B.A., is the Honorary General Secretary. (6) [illegible] co-operative movement [illegible] mpositors in the [illegible] in Bombay. The [illegible] at Hadapsar and [illegible] a, started for the [illegible] number over 35 with a total membership of over 1,800, capital of nearly three lakhs and a total turn-over of five lakhs per year. Nineteen of these societies which are in Bombay for poor labouring classes are so conducted as to free their members entirely from their chronic indebtedness. Their membership of the latter group consists of sweepers, scavengers, mill-hands numbering above 550 and debt amounting to nearly three lakhs of rupees have been cleared off. Moreover, educational work was organized by starting a Co-operative Quarterly and by starting a Co-operative Secretaries' Training Class in Bombay for 60 Secretaries from the various districts for three years. These are now transferred to the Central Co-operative Institute, Bombay, of which Mr G. K. Devadhar is now the Vice-President. These three experiments on such a scale were the first of their kind in India, (7) relief work connected with wide-spread calamities by organizing the Plague Relief Committee of Poona, which succeeded in making inoculation popular in the Deccan, the Salumbra Fire Relief Committee which arrange for the Relief to sufferers for five years and by undertaking a scheme of non-official relief during the famines of 1907-08 and 1914 in the United Provinces, the famine in Gujarat and Kathiawar of 1911-12 and the famine of 1913 in the district of Ahmednagar, and that of 1918-1919 in Gujerat and the Deccan; and in 1920 in Orissa near Puri, (8) Influenza relief was well organized by members of these associations in Bombay and Poona. Since the outbreak of the Malabar Rebellion in August 1921 the members of the Society organised the work of relief which was administered with the help of outside organizations like the Poona Seva Sadan, the Y M C. A., etc., and in collecting funds from all over the country especially Bombay Thus from all over the country substantial help to the extent of nearly Rs 3,50,000 was collected. For the first six months about 19 camps with nearly 27,000 men, women and children of all castes and creeds were maintained very efficiently and during the later six months thousands of Hindu and Moplah families were supported in their villages in the disturbed and the destroyed parts of the district of Malabar This work was closed in the beginning of October 1922. Mr. G. K. Devadhar as Vice-President of the Malabar Central Relief Committee directed the work on behalf of the Servants of India Society. In 1924 the Society organised the South Indian Flood Relief Central Fund in Bombay with a view to giving relief to the poor people, especially the Panchamas, who had suffered from unprecedented floods in the districts of Malabar, Trichinopoly, Coimbatore, Tanjore, and the Indian States of Mysore, Travancore and Cochin. Mr. G. K. Devadhar is the Hon General Secretary and Treasurer and Mr C. S. Deole, one of the Hon. Secretaries of the Fund. The distribution of relief was carried on with the help of Y. M. C. A. workers in the different districts, (9) organizing public opinion on the question of Indians in South Africa, (10) its political work is conducted strictly on constitutional lines and thus it was able to start District Congress Committees in several wards of the city of Bombay. These conducted a political quarterly, (11) it started in Bombay an organization called the Indian Economic Society with a view to promoting the study of Indian economics on right lines and also conducted a vernacular class, (12) A new association called the Indian Liberal Club has been started to carry on political propaganda. It is now reorganized as Institute of Economics and Politics. Besides, the society was engaged in conducting a scheme of welfare work to supply cheap grain, cheap cloth and cheap credit at Jamshedpur. Mr. K. J. Chitalia, one of its Members, has started a Gujarati ladies' organization called the Bhagini Samaj for work among women in Gujarat and Kathiawar. Mr. A. V. Thakkar has started in the District of Panch Mahals in Gujarat a mission for the Bhils for the improvement of the Bhil population and it is called the *Bhil Seva Mandal*. The Society also takes active interest in the organization of labour movement in India. Two of its Members, Messrs. N. M. Joshi and R. R. Bakhale, are conducting a labour monthly, called the "All-India Trade Union Bulletin," which has been recognized as the Official organ of the All-India Trade Union Congress. Quite recently the United Provinces Branch organized a band of volunteers who rendered assistance, in a manner that called forth general approbation, to the pilgrims at the Kumbha Mela in Hardwar and Allahabad, the ladies of the Poona Seva Sadan assisting in this work. The Society engages in journalistic work also, having in its control the *Hitavada*, an English weekly in Nagpur, and the *Dnyan Prakash*, a Marathi daily and weekly in Poona. The Society has been conducting, with Mr. Vaze as editor, an English weekly called *The Servant of India*. The U. P. Branch had in addition undertaken the publication of pamphlets on public questions and has sent out three such publications together with a

...on; Delhi; Jaffna; Madura; Murree; Risalpur; Trivandrum. The others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 114 specially trained full-time Secretaries. A feature of the Y. M. C. A. in India is the international character of its Secretariat. It is made up of 14 Americans, 4 Canadians, 21 Englishmen, 2 Scotchmen, 1 Swiss, 2 Anglo-Indians and 65 Indians and Ceylonese.

The classes of people reached by the Indian Y. M. C. A. and the lines of service it attempts to do for them may be stated as follows:—

Generally:—1. Literature:—Publication of original works and reprints. Four series; "Heritage of India;" "Religious Quest of India;" "Religious Life of India"; "Makers of Modern India."

2. Lecture Bureau:—Many thousands of slides on a wide variety of educational and recreational topics serving a clientele in over 700 centres in India.

3. Physical—Training Physical Directors for schools and colleges, fostering playground movement, Olympics.

4. British Army Work in a number of centres and especially on the N. W. Frontier

Boys:—Scouting, Boys' Clubs, Camps, etc.

Students.—Hostels and Institutes in most University Centres.

Indian students in Britain:—Specially in London, Edinburgh and Glasgow.

"*Citizens*":—(i.e. [illegible] Ceylonese and [illegible] Libraries, Lect[illegible] Study-Circles; handling many subjects of vital interest—social, intellectual and religious.

Rural Reconstruction:—In 4 selected centres where demonstrations are given in cottage industries, poultry farming, book-keeping, etc

Soldiers.—Institutes and Holiday Homes.

Anglo-Indians:—Hostels, Institutes, Employment Bureaux.

Europeans:—Hostels, Institutes, Employment Bureaux.

Labourers in Mills:—"Welfare" Work.

Indians in Fiji.—

Rural Communities:—"Rural Reconstruction" work embracing Co-operative Banking, Distribution, Cattle Insurance and Arbitration, Cottage Industries, and Adult Education.

A monthly magazine, the YOUNG MEN OF INDIA, is issued at Rs. 5 per annum, including postage.

The work of the National Council (excluding that of the 170 local Y.M.C.As.) calls for a Budget of Rs. 2,10,415 in 1927. Of this sum, Rs. 70,000 has to be raised from the public in India.

The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are:—

Patron:—His Excellency Baron Irwin of Kirby-Underdale, P.C., G.C.S.I., G.C.I.E. Viceroy and Governor-General of India.

Chairman of the Executive:—The Hon'ble Sir Ewart Greaves, Kt., M.A., Bar-at-Law.

General Secretaries:—K. T. Paul, O.B.E. and Dr. S. K. Datta.

The Bombay Association now possesses four well-equipped buildings:—Wodehouse Road, Lamington Road, Robsch Street and Reynolds Road. The President is Mr. W. H. Neilson O.B.E., M.I.C.E., and the General Secretary is Mr. H. W. Bryant, M.B.E. In connection [illegible] is also Welfare Work for labourers at Naigaon Secretary, W. E. D. Ward. There is city-wide Physical Work programme; Secretary, A. G. Noehren.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON.—This Association founded in the year 1875 was organized nationally in 1896. The aim of the Association is to promote the physical, intellectual, social and spiritual welfare of young women and girls in India, European, Anglo-Indian and Indian. This is done by the establishment of local branches in different centres. At present they number 80 including city and student branches. The Associations in big cities have a large membership including all classes of the community. The needs of girls are met by physical drill, recreation, clubs and classes, lectures, commercial classes, Bible Study and devotional meetings and meetings for social [illegible] nes, some of [illegible] 70 girls, are [illegible] a demand for [illegible], at present, owns 24 including 8 holiday homes in the hills. These hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The holiday homes provide cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to holiday homes Summer Conferences are held annually at Ootacamund and in a North Indian Centre. Special Girls Camps are arranged from time to time in many centres.

Travellers' aid work is done in the large ports, especially Colombo, and a large number of transient guests and visitors are accommodated in the Homes in these centres. The Association also runs employment bureaux through the agency of which many girls find positions. The Commercial schools train girls for office and business life. These larger Associations are manned by a staff of trained secretaries, some of whom come from

Great Britain, America, Australia, New Zealand and Canada. The others are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by voluntary workers who render faithful service year by year. The majority of the Indian branches are also carried on in this way. The Student Department is affiliated to the World's Student Christian Federation and has 42 branches in the various Schools and Colleges.

The Association, which is affiliated to the World's Committee of the Young Women's Christian Association, is international and inter-denominational. Full membership is confined to members of the Christian Church, but Associate membership is open to any girl or woman of good character, no matter what her religion may be. The National Headquarters are situated in Calcutta and business is conducted by the National Committee which has a representative membership in all parts of India, also in Burma and Ceylon.

The Patroness of the Association is H. E. Lady Irwin.

Copies of the annual reports and other printed matter can be obtained from the National Office which is at 5, Russell Street, Calcutta. The Official Organ of the Association is the "Woman's Outlook," an illustrated monthly magazine, which supplies women living in India with a good magazine at the price of Rs. 2-0-0, post free, per annum.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are —

(1) To facilitate intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom, by communication with the British Federation of University Women, and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates; but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has four branches. The addresses of the Honorary Secretaries are as follows :—

Hon. General Secretary :—Mrs. E. F. Hingeley, c/o P. O. B. 535, Bombay.

Hony. Local Secretaries.

Bombay .. Mrs. Blair, Arthur House, Cooperage, Bombay.

Calcutta .. Hon. Secretary c/o Miss Cornelia Sorabji, 28, Chowringhee, Calcutta.

Delhi .. Mrs. Blomfield, Aurinzet Rd., Raisina, Delhi.

Punjab .. Mrs Irving, 16, Davis Road, Lahore.

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf o the n nt, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organized public meeting for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of **Women's Employment Bureau** in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council; the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

Federation of University Women in India

This is an organization conceived to unite for service and fellowship all University Women of whatever race or University who may be resident in India. Units representing British Universities Indian Universities and American Universities severally have existed since 1913 (Britain) and 1920 (India and America) respectively.

These Units are now fused together into one body: and are as such affiliated to the International Federation of University Women which embraces 27 countries of the world and has its headquarters at Crosby Hall, Cheque Walk, London.

This International Federation is then a kind of League of Nations in which the University is the Unit and the opportunities it affords for better understanding for world-friendship, and world service, will easily be

s forming one Family, its Members help the common cause of women; they help one another by inspiration and interchange of service; they help the country for which as individual Units they stand, inasmuch as that country is swept forthwith by reason of its place within the International Federation alone, into world statistics and the dignity of recognition by the League of Nations at Geneva.

The benefit to Members individually also is great. The Club Houses of the Federation all over the world are open to them. Equally so are all Scholarships and Fellowships offered by the Federation.

During 1927 these last have included. Scholarships from Great Britain and America which gave free tuition, board and residence at certain Colleges to students for a degree; residential scholarships at Crosby Hall, valuable Fellowships and Prizes offered chiefly for Medical or scientific research, by Australia and America.

Membership is open to Women Graduates of any University through the Unit representing that University. Colonial Graduates are at present attached to the British Unit.

Subscriptions.—British Unit .. Rs. 3 a year
Indian Unit .. Rs. 2 a year
American Unit .. Rs. 2 a year

The Federation has Branches in Bombay, Calcutta, Delhi, Lahore. Each Branch has its local Committee. But as a whole the Federation is under a Central Committee with Headquarters at Calcutta for the years 1927 and 1928.

OFFICE BEARERS, CENTRAL COMMITTEE.
President—Mrs. Stewart Macpherson.

LOCAL REPRESENTATIVES.

Bombay .. Miss Beevers.
Mrs. Doctor.
Calcutta .. Mrs. Kellas.
Mrs P. Chaudhuri.
Delhi .. Mrs. Coatman.
Lahore .. Mrs. Dobson.
Mrs. Thapur.

Honorary General Secretary, Miss Cornelia Sorabji, Bar Library, High Court, Calcutta.

Applications for membership should be made to the Honorary General Secretary who will forward the same to the Local Secretary to whose Unit it may appertain.

EX-SERVICES ASSOCIATION, INDIA AND BURMA.

The following shows some of the work carried out during 1926 by the Association which undertakes in India and Burma the work on behalf of British Ex-Officers and British Ex-Service men to which the late Earl Haig pledged himself in England:—

(*a*) 260 applicants provided with employment despite most unfavourable conditions.

(*b*) Over Rs. 2,30,400 expended in affording assistance to British Ex-Service men and the dependents of these in India and Burma, and a further £550 contributed to Earl Haig's Association at Home for the assistance of those Ex-Members of the Indian Services who after returning to England were in distress and want.

Men were started in business, distress arising from sickness and from unemployment was relieved. School fees were paid and School outfits provided for numerous children, repatriation and emigration expenses were met, board and lodging were provided while men looked for work, widows, orphans and deserted wives assisted, expenses of training were borne, legal and medical expenses were met.

(*c*) Miscellaneous assistance of every description was given to applicants. Matters of pay, pensions and gratuities were assisted, information and advice as to Colonial Settlement were given, legal advice was afforded, letters of recommendation to possible employers were given and employment offered in India to serving soldiers was investigated and the wants of large numbers of ex-officers and ex-service men were gone into at interviews.

H. E. the Commander-in-Chief is the President of the Association.

INTEREST TABLE.

From 5 to 12 per cent. on Rupees 100.

Calculated for 1 Year, 1 Month (Calendar), 1 Week, and 1 Day (365 Days to a Year) the Decimal Fraction of a Pie for the Day being shown for the Day.

The Church.

In the ordinary acceptance of the term there is n[illegible] India. An Ecclesiastic[illegible]intained for providing [illegible] primarily to British [illegible]e European civil officials of Government and their families. Seven out of the eleven **Anglican Bishops** in India are officers of the Establishment, though their episcopal jurisdiction far transcends the limits of the Ecclesiastical Establishment. The stipends of the three Presidency Bishops are paid entirely by Government, and they hold an official status which is clearly defined. The Bishops of Lahore, Lucknow, Nagpur and Rangoon draw from Government the stipends of Senior Chaplains only but their episcopal rank and territorial titles are officially recognised. The Bishops of Chota Nagpur, Tinnevelly-Madura, Travancore-Cochin Dornakal and Assam are not on the establishment. The new Bishopric of Assam was created in 1915. In its relations with Government it is subordinate to the see of Calcutta. But the maintenance of the Bishopric is met entirely from voluntary funds.

The **ecclesiastical establishment** includes four denominations—Anglican, Scottish, Roman and Wesleyan. Of these, the first two enjoy a distinctive position, in that the Chaplains of those denominations (and in the case of the first-named the Bishops) are individually appointed by the Secretary of State and rank as gazetted officers of Government. Throughout the Indian Empire there are 134 Anglican and 13 Church of Scotland chaplains whose appointments have been confirmed. The Roman Catholics and Wesleyans receive block-grants from Government for the provision of clergy to minister to troops and others belonging to their respective denominations. The Wesleyan Methodist Church has a staff of military chaplains in India who receive a fixed salary from Government and 25 chaplains working on a capitation basis of payment by Government. Churches of all four denominations may be built, furnished and repaired, wholly or partly at Government expense.

The Anglican Communion has at last attained to **self-government**. In Dec. 1927 the Royal assent was given to an Indian Church Measure and Bill and Jan. 1, 1928, was fixed as the date of their coming into operation. These laws have effected two great changes in the affairs of the Church. Up to the present the General Council has been a body unrecognised by law. It is now empowered to legislate for the Church. Further, property which has been held for the Church by the Bishops and Archdeacons as Corporation Sole will now be transferred to Trust Associations which will be established under the Act. The actual date of severance of the legal bond between the Church in India and the Church of England has not yet been fixed, but by order of the King in Council it must be some day in 1930. After the severance is complete the Church in India will be as free to manage its own affairs as is the Church of any one of the other great Dominions. Apprehension was felt by many that freedom would involve drastic departures from the faith and practice of the Church of England. Such fears have already been proved groundless, in the first place by the adoption of a Constitution wholly Anglican in ideal and principle and secondly by the pledge given in the most solemn manner, at the instance of purely Indian dioceses, that the right of European congregations to worship according to the Use of the Church of England will be most carefully safeguarded.

After the date of severance the law of the Church will be its own "Canon Law" passed by the General Council. In every fully constituted Diocese there is a Diocesan Council composed of the Bishop all the clergy who hold his license, and lay representatives from every parish. The Diocesan Councils manage all purely domestic matters and have the right of petitioning the General Council about any subject of wider importance which may interest them. They elect a given number of priests and laymen to be their representatives on the General Council. General Councils are held not less than every three years and usually at Calcutta. They consist of three "Houses." Bishops Priests and Laymen. Every Diocesan Bishop has a place in the House of Bishops. The other two Houses are formed by the elected representatives of the Diocesan Councils. The three Houses usually sit and vote together, but any House has the right to meet alone if it desires to do so in order to formulate its policy or classify its opinions. A "Canon" of the Church is a Resolution passed with additional precautions ensuring due consideration by all three Houses. In all questions touching faith or Order the position of the episcopate as the divinely authorised teacher of the Church is most carefully safeguarded and the Bishops alone, without the concurrence of the other Houses, can issue Determinations about both subjects. But no Determination of the Bishops can be the subject of disciplinary action until it has become a Canon.

Another great change which will almost immediately take place will be the **election of the Bishops** to vacant sees by the dioceses over which they are [illegible] after the date of sev[illegible] for the Bishops, th[illegible] lains will continue [illegible] of the debate upon th[illegible] House of Lords the Secretary of State for India stated that the Government of India acknowledged that the provision of Chaplains and the maintenance of churches for the use of its European servants were duties of moral obligation. Very few Europeans therefore will notice any change at all in the status of services of their Church. But the Indian section of the Church has at least been set free to develop along lines more suitable to the Indian character than those fixed for English people during the controversies and persecutions of the fifteenth century.

So far as the European and Anglo-Indian communities are concerned the activities of the Church are not confined to public worship and pastoral functions. The education of the children of those communities is very largely in the hands of the Christian denominations. There are a few institutions such as the La

[illegible] Schools on a non-denominational [illegible] has [illegible] In [illegible] large centres there exist schools of various grades as well as orphanages, for the education of Europeans and Anglo-Indian under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth of the Indian Empire; and they maintain a high standard of efficiency. The Anglican Church comes next, and the American Methodists have established some excellent schools in the larger hill-stations. The Presbyterians are also well represented in this field, particularly by the admirable institution for destitute children at Kalimpong, near Darjeeling. Schools of all denominations receive liberal grants-in aid from Government, and are regularly inspected by the Education Departments of the various provinces. Thanks to the free operation of the denominational principle and its frank recognition by Government, there is no "religious difficulty" in the schools of the European and Anglo-Indian communities.

Christian Missions.

The tradition that St. Thomas, the Apostle, was the first Christian missionary in India is by no means improbable. History, however, carries us no further back than the sixth century, when a community of Christians is known to have existed in Malabar. Since then the so called **Syrian Church** in south-west India has had a continuous life. Except in its infancy this Church (or rather these Churches for the Syrian Christians are now divided into four communions) has displayed little of the [illegible] recent times [illegible] introduced into [illegible] who established [illegible] their sphere of [illegible] tropolitical see of [illegible] ier, a Spaniard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost super-human zeal was rewarded with much success, but many of the fruits of his labour were lost with the shrinkage of the Portuguese Empire. It is really to the work of the missionaries of the **Propaganda** in the 17th century that the Papacy owes its large and powerful following in India to-day. The Roman Catholics in India number 1,823,000, of whom 332,000 were added during the decade 1911-1921. The total of "Syrian" Christians (exclusive of those who while using the Syrian liturgy, are of the Roman obedience) is 315,000, as against 367,000 in 1901. Protestant Christians (the term throughout this article includes Anglicans) number 2,950,000, an increase of 547,000 since 1911. Thus, the total number of Christians of all denominations in India is now close on five millions. In fact it probably exceeds that figure at the present moment, as these statistics are taken from the Census Report of 1911, and the rate of increase during the previous decade was nearly 100,000 per annum.

The Protestant Churches made no serious attempt to [illegible] India till 18 3 They [illegible] us b n a wo k n the Ind n m on fi d o [illegible] 10 y a nd he s a ist al results of their efforts are given above It is now, however, generally recognized that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffusive influence of Christianity is the missionary school and college. The **Protestant missions** fill a considerable part in the elementary education of the country. According to the 1923 *Report of the National Christian Council for India* they are teaching 420,255 children in 12,699 elementary schools, mostly situated in villages. The majority (243,895) of children in these schools are non-Christians. The same is true also of the secondary schools and in a still greater degree of the colleges. The former number 523 with 70 254 male and 25,302 female pupils. There are 40 colleges affiliated to Universities, containing 20,062 male and 1,309 female students. Of these as many as 14,148 are non-Christians From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes, and the higher educational ideals maintained by their staffs. The principal **University colleges** under Protestant auspices are the Madras Christian College: the Duff College, Calcutta; the Wilson College, Bombay; the Forman College, Lahore, and three women's colleges—the Women's Christian College at Madras, the Isabella Thoburn College at Lucknow, and the Women's Christian Medical College at Ludhiana. The Roman Catholics have a large number of educational institutions, ranging from small village schools to great colleges preparing students for University degrees. But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts, but compared with Hindus and Mahomedans it is conspicuously higher. The Roman Catholics have some 3,000 elementary schools in which 98 000 boys and 41,000 girls are receiving instruction In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 5,000 students of both sexes. These figures, however, include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more widespread results, is the **philanthropic work** of Christian missions. Before the great famine of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great stimulus was also given to medical missions **Hospitals and dispensaries** have sprung up in all parts of the [illegible] field and oper

a e a mo t a m nopo [illegible] n m n ry effort n 191 he o a nu nb o d a mis ona w ing und Pr s an o e ties in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the **Salvation Army** hold a prominent place; and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public, and such movements as "The Servants of India" and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Reunion.—For very many years Indian Christians have shown that they felt much more acutely than Europeans the scandal and disadvantage of the divisions of Christendom. These divisions are due to a very much greater extent than is always recognized to political causes, and in the political conflicts of the sixteenth and seventeenth centuries, when they became crystallised, India had no part. Even those differences amongst Christians which have a purely religious origin and foundation seem to be of very little account to Indian converts. For them the great dividing line is that between Christ and Mahommed or Shiva and Vishnu. Standing before a background of paganism they are conscious of a real fundamental unity in Christ. Compared with the greatness of the gulf which separates Christian from non-Christian, the differences of "confession" and "order" which separate Christian from Christian seem to be wholly artificial and negligible. In consequence the reunion movement, which is noticeable all over the world, is nowhere so strong as in India. In South India it has already resulted in the formation of the South India United Church, which is a group union of five of the principal Protestant communions, and as these bodies are in communion individually with all, or almost all, the other Protestant bodies at work in India the Union may be regarded as a Pan-Protestant Union. The S.I.U.C. is at present negotiating with the Anglican Church. If, as seems probable the negotiations are successful the result will amount to a union of all the Christian bodies in South India, except the Roman Catholics, on the basis of the last Lambeth encyclical. This will mean that a real National Indian Church will come into being. Although it will be tolerant of almost every expression of Evangelical opinion and will retain the freedom of development characteristic of Protestantism, by its acceptance of the Catholic creeds and the Historic Episcopate, it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies.

The Church Missionary Society carries on work in India in seven different missions—the nited P me s h India n e nd c n B n n n a unjab an S nd and h n P o m e and Ra pu na. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1854. The Society has always kept Evangelistic work well to the fore; but it also has important medical missions, especially on the N.-W. Frontier and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C. M. S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C. M. S. in India and Ceylon is 160, European laymen 30 and European laywomen 258. The Society claims a Christian community of 2,21,359 of whom 63,655 are adult communicants.

Society for the propagation of the Gospel.—Statistics of the work of this Society are not easily ascertained, as much of it is done through Diocesan institutions, which, while financed and in many cases manned by the S. P. G., are entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St. Stephen's College and School. At the College there are about 200 students under instruction, and at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in Burma, in the Ahmednagar District and in several parts of South India, especially in the Diocese of Tinnevelly-Madura. The S. P. G. also maintains an important Criminal Tribes Settlement at Hubli, in the Bombay Carnatic. There are 116,000 Indian Christians under the aegis of the S. P. G.; 90 ordained European missionaries and 98 European lady workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1880. It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission priests of this Society, and 16 Sisters. In addition to its work amongst the poor, the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Epiphany*, which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has houses at Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionary work centres round the Church of Holy Cross, Umarkhadi, where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay population. At Poona the Society co-operates with the Wantage Sisters and in Bombay with the All-Saints' Sisters. Other Anglican sisterhoods represented in India are the Clewer Sisters at Calcutta and the Sisters of the Church (Kilburn) at Madras. The St. Hilda's Deaconesses' Association of Lahore carries on important educational work (chiefly amongst the domiciled community) in the Punjab. The mission of the Scottish Episcopal Church at Nagpur, the Dublin University Mission at Hazaribagh, and the Mission of the Church of England in Canada working at Kangra and Palampur (Punjab) should also be mentioned under the head of Anglican

Bengal Ecclesiastical Department

We tcot The Right Reverend Foss, D.D. .. .. Lord Bishop of Calcutta and Metropolitan of India.

SENIOR CHAPLAINS.

Parker, Rev. William Almair Hedley .. .. (On leave.)
Penley, Rev. *Horace Octavius*, M.A. .. .. Chaplain, Shillong

Martin, Rev. F. W.	Mhow.
Day Rev. E. R., M.A.	Second Chaplain, Nasirabad.
Warmington, Rev. G. W.	(On leave.)

Hindu Mahom[illegible] Pa[illegible] Among mos[illegible] St Xavi[illegible] [illegible]ge, Calcutta, St. Peter's College, Agra, St. [illegible]vier's College, Bombay, St. Joseph's College, [illegible]chinopoly, St. Aloysius College, Mangalore, [illegible]ola College, Madras, teaching university [illegible]ses; besides a large number of high [illegible]ools and elementary schools. The educa[illegible] of girls is supplied for by numerous [illegible]vent schools worked by religious congre[illegible]ons of nuns to say nothing of orpha[illegible]es and other charitable institutions. [illegible] total number under education amounted [illegible] to 143,051 boys and 73,164 girls, [illegible]r figures being unavailable. As to [illegible]sionary work proper, the country is [illegible]ered with numerous modern mission [illegible]tres, among which those in the Punjab, [illegible]ta Nagpur, Krishnagar, Gujerat, the Ahmed[illegible]ar district and the Telugu coasts may be [illegible]tioned. (Full particulars on all points [illegible] be found in the Catholic Directory already [illegible]ted.) The mission work is limited solely by shorta[illegible] f men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinar[illegible] pay of a few military a[illegible] are derived mainly [illegible] from the collections of the Society for the Propagation of the Faith and of the Holy Childhood, helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is usually represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Edward Mooney, D.D., appointed in 1925.

THE SCOTTISH CHURCHES.

Church of Scotland.—The Chaplaincy of the Church of Scotland dates from [illegible] when the Rev. Dr. Bryce landed [illegible]lcutta, and organised a congregation [illegible] Scottish fellow countrymen. The [illegible]ary of the churches in the three [illegible]lency towns was celebrated: Calcutta, [illegible] Bombay, 1919; Madras, 1921. Since [illegible]here have been eighteen chaplains on the [illegible] of whom nine belong to the Bengal [illegible]ency, five to Bombay, and four to Madras. [illegible] minister both to the Scottish troops [illegible] the civil population of the towns where [illegible]re stationed, but when there is a Scot[illegible]giment the chaplain is attached to the [illegible]nt, instead of being posted to the station [illegible] the regiment happens to be placed [illegible] a rule moves with the regiment. There [illegible]ree Presidency senior Chaplains in charge [illegible]ngal, Bombay, and Madras respectively. [illegible] are churches in the chief towns of the [illegible]encies, and churches have also been [illegible] in all considerable military stations, [illegible]hakrata, Lucknow, Peshawar, Ranikhet, [illegible]pindi, Sialkot, Umballa and Jub[illegible]e. In addition to the regular establish[illegible] there are a number of acting Chaplains [illegible]ut by the Colonial Committee of the [illegible] of Scotland, and these are serving in such [illegible] as Rawalpindi, Lahore, Cawnpore, [illegible] Mhow and Quetta. The Additional [illegible] [illegible]owards the [illegible] In other [illegible] Dalhousie, [illegible]arjeeling, regular services are provided [illegible]ttish Missionaries. Simla has a minister [illegible]wn sent out from Scotland.

Mission work of the Church of Scotland [illegible] from 1829, when Alexander Duff, one [illegible] greatest of modern missionaries, was [illegible] Calcutta. He was the first to open [illegible] where English was made the medium [illegible]ruction, and where religious teaching [illegible]en daily. Similar educational missions [illegible]on afterwards started in Bombay and [illegible] Educational work is still an import[illegible]nch of the mission work of the Church, but the Bombay College was closed in 1891 and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres under seventeen missionaries. The baptised Christian community now numbers over 14,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 8,000. In the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1919 over 24,787 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service, in school, medical and zenana work, having in India 41 European missionaries, 168 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Together with the United Free Church, St. Andrew's Church has six representatives on the governing body of the Anglo-Scottish Education Society, and the two churches exercise pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St. Andrew's High School, and both in Bangalore and in Madras the local congregation supports the school for poor children. The Ayrcliff Girls' Boarding and High School is under the care of the Kirk-Session of St. Andrew's Church, Simla. The now well-known St. Andrew's Colonial Homes at Kalimpong, Bengal, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Reports of the Schemes of the

Church of Scotland and Blackwood & Sons. The Church of Scotland Year Book and The Handbook of the Church of Scotland in India and Ceylon.

The United Free Church of Scotland.—This branch of the Scottish Church has only three purely European congregations in India, two in Calcutta, Wellesley Square, and Howrah and one in Bombay, Waudby Road. In Calcutta the Howrah Church is in the district of the mills, and every effort is made to minister to the Scottish Engineers and other workers in the mills. As noted above members of these congregations co-operate with the Established Church of Scotland in providing education for European children.

The Church carries on Mission work in seven different areas. They are Bengal (Calcutta, Kalna and Chinsura); the Santal Parganas, with five stations; Western India (Bombay, Poona and Alibag); Hyderabad State (Jalna, Bethel and Parbhani); Madras (Madras City, Chingleput, Sriperumbudur and Conjeeveram); the Central Provinces (Nagpur, Bhandara, Wardha, and Amraoti), Rajputana, where the extensive work instituted by the United Presbyterian Church in 1860 is now carried on from eleven centres.

The work falls into three main divisions, evangelistic, medical, and educational. The Christian community has been organised in all the chief centres into congregations which form part of the Indian Presbyterian Church, and this Church is seeking to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's Hospitals, in Madras, Nagpur, Ajmer, and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education through four Christian Colleges. The Scottish Churches College, Calcutta, is under the joint management of the Church of Scotland and the United Free Church. The Madras Christian College, which owes so much to the work of Dr. William Miller, is now under the direction of a Board representing several Missionary Societies. Wilson College, Bombay, with which the names of Wilson and Dr. Mackichan are specially associated and Hislop College, Nagpur, are under the direct management of the United Free Church.

BAPTIST SOCIETIES.

The Baptist Missionary Society of Great Britain.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar and Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 184 missionaries and about 1,159 Indian and Singalese workers. Connected with the Society are 315 Indian and Singhalese Churches, 346 Primary Day Schools, 25 Middle and High Schools, and 4 Theological Training Colleges. The Church membership at the close of 1925 stood at 19,911 and the Christian community at 56,654. The membership during the past ten years has increased by about 53 per cent. and the community by 50 per cent. in the same period. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack and Delhi, where hostels have been erected for the prosecution of this form of work.

Educational Work.—Ranges from Primary School to Colleges. Serampore College, the only College in India able to bestow a theological degree granted under Royal Charter by His Danish Majesty in 1827, confirmed by the British Government in the Treaty of purchase of the Settlement of Serampore in 1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, Arts and Theological. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

As the only College in India granting a Theological Degree a large number of students are now resident in the College. In Arts, the College prepares for the Calcutta Arts Examinations. *Principal*: Rev. G. Howells, M.A., B.D., B.LITT., PH.D.

There is a institute vernacular also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 9 or 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 6 Hospitals, and 7 Dispensaries. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretaries of the Mission are the Rev. John Reid and W. Craig Eadie, Esq., 48, Ripon Street, Calcutta.

The *Headquarters* of the Mission are at 19, Furnival Street, Holborn, London. The total expenditure of the Society for 1926 amounted to £239,684.

The Canadian Baptist Mission.—Was commenced in 1873, and is located in the Telugu

Coun y to h n o M d as th K na Goda a ... and ... Districts. There are 22 stations and 855 out-stations with a staff of 92 missionaries, including a qualified physician, and 1,031 Indian workers, with Gospel preaching in 1,399 villages. Organised Churches number 86, communicants 18,853 and adherents 22,116 for the past year. Seventeen Churches are entirely self-supporting. In the Educational department are 452 village day schools, with 13,927 children, 13 boarding-schools, 1 High school, a Normal Training school, a Bible Training School for Women, a Theological Seminary providing in all for 1,000 pupils, and an Industrial school. There are 6 Hospitals, two leper asylum. ... The Mission publishes a ... gelisation is the ... and stress is laid upon the work amongst women and children. During the last decade membership has increased by 80 per cent., the Christian community by 8[illegible] per cent., and scholars by 500 per cent. The Indian Secretary is the Rev A. Arthur Scott, Tuni, Godavari District.

THE AMERICAN BAPTIST TELUGU MISSION.—Was commenced in the year 1836, and covers large parts of Nellore, Guntur, Kistna, and Kurnool Districts, parts of the Deccan and an important work in Madras and the surrounding vicinity. Its main work is evangelism, but there are also Educational and Medical Institutions of importance. Industrial Settlement work for the Erukulas is carried on at Kavali and vicinity. Industrial departments are maintained also in connection with the Mission High Schools at Nellore, Ongole and Kurnool. Organized Telugu Churches number 236, with 88,713 baptized communicants. There are 102 missionaries, and 2,190 Indian workers. The mission maintains a Theological Seminary at Ramapatnam for the training of Indian preachers. A bible Training School for the training of Telugu women is located in Nellore. A total of 32,680 receive instruction in 1,270 primary schools, 16 secondary schools and 4 high schools. In Medical work 8 Hospitals and 12 Dispensaries report 3,823 in-patients, 47,288 out-patients, and 115,073 treatments during the year.

Secretary: Miss E. J. Draper, Nellore

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma begun 1814; Assam 1836; Bengal and Orissa 1836; South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 33 main stations in Burma, 13 in Assam, 29 in Bengal and Orissa, 10 in South India, besides hundreds of out-stations. All forms of missionary enterprise come within the scope of the Society.

The missionary staff numbers 427 in all with an Indian workers' staff of 5,002. Communicants number 202,934. Organized churches number 1,779 of which 1,175 are self-supporting. Educational work is conducted on a large scale, the total number of schools of all grades being 4,293 with over 85,027 pupils. The Christian College has 262 students in college classes. There are twenty High Schools with 4,686 pupils.

Medical work includes 1[illegible] Hospitals and 27 Dispensaries, in which 61,653 out-patients and 4,253 in-patients were treated last year.

Indian Christians contribute annually more than Rs. 5,71,[illegible] for religious and benevolent work within the Mission.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible-women, and extends to many races and languages, the most important of which, in Burma, has been the practical transformation of the Karens, whose language has been reduced to writing by the Mission. The work in Assam embraces 9 different languages, and large efforts are made amongst the employees on the tea plantations. There are 18 Theological Seminaries and training schools with 672 pupils. The Mission Press at Rangoon is the largest and finest in Burma.

Assam Secretary, Rev. A. J. Tuttle, Gauhati, Assam.

Burma Secretary, Rev. C. E. Chaney, 15 Mission Road, Rangoon, Burma.

Bengal and Orissa Secretary, Rev. Harold I. Frost, Balasore, Orissa.

South India (or Telugu) Secretary, Rev. W. L. Ferguson, D.D., Madras.

n T n T e no n a 4 b r ugu Ch a 09 a and 8 Puliar Christians in the hills. *Secretary*: Rev. S. S. Moses, Palamcottah.

THE MISSION TO LEPERS—Founded in 1874, is an inter-denominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children working in 15 countries but largely in India, China, Korea and Japan. Its work in India is carried on through co-operation with 30 Missionary Societies. In India alone the Mission now has 37 Asylums of its own with upwards of 5,000 inmates and is aiding or has *some connection with work for lepers at 23 other* places in India. Altogether in India over 7,000 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 800 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical *treatment whereby early cases both adults* and children are now benefiting.

Most of the Mission's income is received from voluntary contributions. Some funds are raised in India, but the bulk of the money expended by the Mission in India, is received from Britain, although the provincial Governments give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers, of which H. E. Lady Wilson, who represents the Bombay Presidency, is a Vice-President.

Hon. Treasurer: Henry F. Lewis, Esq., 12, Dalhousie Sq., Calcutta.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION.—This is an inter-denominational society, with headquarters 33, Surrey Street, London, working among women and girls in six stations in the Bombay Presidency, 10 in United Provinces, and 3 in the Punjab. There are 80 European Missionary ladies on the staff and 29 Assistant Missionaries, 199 Indian teachers and nurses and 53 Bible women. During 1925 there were 3 442 in-patients in the five hospitals supported by the Society (Nasik, Benares, Jaunpur, Lucknow and Patna), but the Victoria Hospital, Benares, was closed. There were 24,668 out-patients, 98,494 attendances at the Dispensaries. In their 33 schools were 2,833 pupils, and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenanas, 1,385 women were regularly taught and 1,385 houses were visited. The 57 Bible women visited 480 villages; the number of houses was 1,988; major operations 575; minor operations 977; Total expenditure £ 57,015-14-7.

Hon. Treasurer: The Lord Meston of Dunottar.

Secretaries: Rev. Dr. Carter, Rev. E. S. Carr' M.A. (Hon.), and Miss E. Marriner.

WOMEN'S CHRISTIAN MEDICAL COLLEGE, WITH WHICH IS INCORPORATED THE PUNJAB MEDICAL SCHOOL FOR WOMEN.—In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influences to Indian Women. Doctor Edith Brown. M.A., M.D., was its Founder and Principal. The School was Inter-denominational, and trained students for various Missionary Societies.

Clinical work was at first given at the Charlotte Hospital which belonged to the Ludhiana Zenana and Medical Mission. The Memorial Hospital was opened in 1900, and has now 200 beds. In 1913 non-Christian Students were also admitted for training, and the name was modified to its present title given above.

In 32 years 160 medical students have qualified as doctors, besides compounders, nurses and dais. At present over 90 are in training as medical students, 18 as compounders, 56 as nurses and 38 as dais. New laboratories have been built for Clinical Pathology for Physiology and for Chemistry and Physics and new quarters for the Sisters and Nurses.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1895 to reach the higher class of Indian ladies. Its activities now include a hostel for women students, in addition to educational, social, and evangelistic work, and a Holiday House for students and other ladies at Bordi-Gholvad, B. B & C. I. Ry. *Warden*: Miss Gedge, Vacchagandhi Road, P. O. 7, Bombay.

THE RAMABAI MUKTI MISSION (affiliated with the Christian and Missionary Alliance Mission in 1925) the well-known work of the late Pandita Ramabai, shelters about 600 deserted wives, widows and orphans, educating and fitting them to earn their living. The Mission is worked on Indian lines and carried on by Indian and European workers. Evangelistic work is carried on in the surrounding villages of Kedgaon, Poona District.

Disciple Societies.

The India Mission Disciples of Christ, under the United Christian Missionary Society, St. Louis, U.S.A., began work in India in 1882. It works in the Central Provinces and South United Provinces. There are 86 Missionaries including missionaries' wives and 349 Indian workers There are 14 Organised Churches with the membership of 2,385. There is a Christian community of 4,117. There are 7 Hospitals and 12 Dispensaries in which 141,264 in-patients and out-patients were treated last year. Two Orphanages and Industrial Homes show 375 inmates. A Boarding School for girls and one for boys and 3 Hostels for boys show 501 inmates. 2 Leper Asylums have 160 inmates. A Tuberculosis Sanitarium at Pendra Road admitted 95 patients during the year. An Industrial School is conducted at Damoh in connection with which a 400 acre farm is used for practical work. In the Home for women and children at Kulpahar needle work, gardening, etc., are taught in connection with which a large business is done each year. The Mission

Press at Jubbulpore printed about 3,000,000 pages of Christian Literature. There is a High School; also 8 Middle Schools, 28 Primary Schools with about 3,000 pupils.

The Australian Branch has 3 Mission Stations in the Poona District The Great Britain and Ireland Branch in Mirzapur District of U.P. and Palamau District in Orissa. These two have no organised connection with the India Mission Disciples of Christ.

Secretary and Treasurer: W. H. Scott, Jubbulpore, C. P.

Undenominational Missions.

THE CENTRAL ASIAN MISSION. Objective: Salvation of Central Asia; from Afghanistan to Tibet (including N. E. portion of Peshawar District), North Kashmir, etc. Protestant Evangelical, Inter-denominational Head-quarters in India, Mardan, N. W. F. P.; in London 62 Lincoln's Inn Fields. Branch Stations. Bandapur, N. Kashmir, Shigar, Baltistan. Founded and managed chiefly by officers who have served in Frontier parts.

THE FRIENDS' FOREIGN MISSION ASSOCIATION works in five stations of the Hoshangabad Division of the Central Provinces, and in two of the adjacent Bhopal State, and has also some work going on in that of Gwalior. There are 7 Churches, 9 missionaries, 173 members in full communion, 1,097 Christian adherents; 1 Boarding School for girls and 1 Industrial School for boys, 1 Anglo-Vernacular Middle School and 8 Primary Schools; and one hospital with dispensary attached and 1 village dispensary; a self supporting weaving community at Itarsi and a Farm Colony at Makoriya, in Hoshangabad District. *Secretary:* G. W. Maw, Itarsi, C. P.

THE AMERICAN FRIENDS' MISSION with 8 Missionaries is working in Bundelkhand. *Secretary:* Miss E. E. Baird. Nowgong, C. I.

THE OLD CHURCH HEBREW MISSION was established in 1858, in Calcutta, and is said to be the only Hebrew Christian Agency in India *Secretary:* The Chaplain, 11, Mission Row, Calcutta.

THE OPEN BRETHREN—Occupy 46 stations in the U. Provinces, Bengal, S. Mahratta, Godaveri, Delta, Kanarese, Tinnevelly, Malabar Coast, Coimbatore and Nilgiri Districts. They hold an annual Conference at Bangalore.

Lutheran Societies.

THE INDIA MISSION OF THE UNITED LUTHERAN CHURCH IN AMERICA.—Formerly American Evangelical Lutheran Mission, Guntur and Rajahmundry. Work is conducted in the East Godavari, West Godavari, Kistna, Guntur, Nellore and Vizagapatam Districts Its Missionary staff consists of 106, including Missionaries' wives and 3,221 Indian workers. The baptised membership is 121,479 . There are 928 Village Schools, 13 Boys, Boarding Schools, 6 Girls' Boarding School, 3 High Schools, a First Grade College with 600 students, 7 Bible and Secular Traning Schools, a Theological Seminary, 1 Agricultural School, 5 Hospitals and 2 Mission Presses. *Chairman:* The Rev. G. A. Rupley Rentichintala, Guntur District

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF STOCKHOLM, SWEDEN, founded in 1856, occupies the districts of Saugor, Betul, and Chindwara in the Central Provinces there are about 2,300 Church members constituted into an indigenous Church with 12 local congregations. The European and Indian staff numbers 31 and 171 respectively. One Theological Seminary for training catechists and pastors, and one Training School for training Bible Women. 31 Day Schools with 1 390 children. 51 Sunday Schools with 621 Christian and 1,288 non Christian children. 9 Dispensaries with 24 687 patients during 1926 3 Workshops, one of them with an aided Carpentary School. One Female Industrial School one Widows' Home 7 Orphanages and one Boarding School for Christian children. At the end of 1926 there were 183 boys and 257 girls in these Institutions.

Secretary Rev. P. E. Froberg Chhindwara C. P.

THE KANARESE EVANGELICAL MISSION with Headquarters at Mangalore, South Kanara, was organised on January 1st, 1919, to take over the Mission work done formerly by the Basel Evangelical Mission in two of her fields, namely the Districts of South Kanara and South Mahratta In 1926 a union was effected between the Home Boards at Lausanne and Basel, but as before Lausanne will be specially responsible for the two districts in their charge at present. The Missionaries and the Funds come from Switzerland. It is hoped that a few of the former Basel Missionaries will return to these Districts. The last available figures are: 12 chief stations and 56 outstations with a total missionary staff of 35 and 412 Indian workers. There are 48 organised congregations with a total membership of 12,324, which gave a total contribution of Rs. 16,107-1-11 for church and mission work Educational work embraces 72 schools, of which there are 3 High Schools. The total number of scholars is 8,626.

Medical work is done at Betgeri, South Mahratta, with a full staff and a hospital and two branch hospitals and dispensaries A Women's and Children's Hospital was opened in June 1923 at Udipi, South Kanara, and has been enlarged of late.

The Mission maintains a Home-Industrial Department for women's work and a large Publishing Department at Mangalore with a bookshop and a printing press occupying some 150 hands and doing work in many languages

Ag. Secretary: The Rev. P. E. Burkhardt, Ph. D, Udipi, South Canara.

THE CHURCH OF SWEDEN MISSION was founded in 1874. Operated till 1915 in the Madura Tanjore, Trichinopoly and Ramnad Districts Since 1915 the Mission having taken full charge of the former Leipzig Evangelical Lutheran Mission field, working also in the Madras Chingleput, Coimbatore, Salem, S. Arcot Districts with diaspora congregations in Rangoon, Penang Kuala-Lumpur and Comlombo.

L. E. L. M. (Leipzig Evangelical Lutheran Mission) re-entered into the work, in 1927. Hence the Church of Sweden Mission now works in the Trichinopoly, Coimbatore, Madura & Ramnad Districts with the diaspora

THE INDIA MISSION OF THE EVANGELICAL LUTHERAN SYNOD OF MISSOURI, OHIO AND O. S is located in North Arcot, Salem and Tinnevelly Districts, in Travancore, in Cochin, and the Kolar Gold Fields, with 25 missionaries, 1 nurse, one deaconess-nurse (American), 1 doctor (Indian), 1 Zenana worker, 1 American teacher in charge of Missionary Home for children and 1 Lady educationist. Besides the three [illegible] are one complete and c[illegible] hools, and among the E[illegible] complete Higher El mentary. In addition to evangelistic and educational work, the Mission has now an up-to-date Dispensary and Lying-in Hospital with 18 beds in Ambur and a Theological Seminary (24 students, besides 4 students doing active field work). *Secretary:* Rev. R. W. Goerss, Nagercoil, S. Travancore.

THE DANISH MISSIONARY SOCIETY.—Established 1863 in South Arcot, working there and in North Arcot, on the Shevaroy Hills and in Madras, has a total staff of 317 Indian and 47 European workers, Communicants 1 578, Christian community 4,671, 1 High School, 3 Boarding Schools, 2 Industrial Schools, 1 Orphanage, 2 Hostels and Elementary Schools 81 total scholars 4,130.

President: Rev. P. Lange, B.A., B.D., Nellikuppam, N. T.

Treasurer: Rev. K. Heiberg, B.A., B.D., 38, Broadway, Madras.

THE SANTAL MISSION OF THE NORTHERN CHURCHES (formerly known as the India Home Mission to the Santals)—Founded in 1867, works in the Santal Parganas, Goalpara (Assam), Malda and Dinajpur. Work is principally among the Santals. The mission staff numbers 27; Indian workers 480; communicants 4,000; Christian community 23,000; organised churches 36; boarding schools 4; pupils 508; elementary schools 69 pup 035 ndus a schoo 2 O phanage 1 ch d en 29 *S cr tary* Rev P O Bodding Dumka Santa Parganas.

MISSIONS AND ENEMY TRADING ACT.—In May 1918, the following notice regarding Missions was published in the "Gazette of India":—"The following missions or religious associations are declared companies under Act 2 (the Enemy Trading Act) of 1916:—The Leipzig Evangelical Lutheran Mission, Madras, the Hermansberg Evangelical Lutheran Mission, Madras, the [illegible] Mission, [illegible] Lutheran [illegible] d Behar [illegible] Lutheran Mission of Ranchi, Behar and Orissa. The Governor-General in Council notifies that the powers conferred under Section 7 of the said Act shall extend to the property, movable and immovable, of these missions or religious associations."

In June, 1919, the Government of India stated:—"Effect is already being given to the suggestion that enemy missions in India should be taken over by British societies. The properties and undertakings of hostile missions have been vested in the Provisional Custodian of Enemy Property with a view to their transfer to boards of trustees composed partly of non-official members nominated by the National Missionary Council of India with the approval of the Government of India and partly of Government officials, and those Boards of Trustees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor-General in Council.

Methodist Societies.

The Methodist Episcopal Church is the organization in the United States of America which grew out of the Wesleyan revival in England and her American colonies during the latter part of the eighteenth century. This Church began its work in India in 1856, at first confining its activities to what is now the United Provinces. From that centre it spread until the outposts of its work were found in Baluchistan, Burma, Malaysia, Netherlands Indies and the Philippine Islands. In 1920 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division. Within this present field the Church now has a total baptized Christian community of over half a million of whom approximately 20 000 were baptised the year ending with 1926.

The avowed task of the Church has been the uplift of the depressed classes, and its work has been largely among that class. As a matter of fact, however, it has large numbers who came from the Mohammedans and the caste Hindus, and among such its influence is extending.

The educational work of the Church is extensive, it having in this area a total of 1 301 schools of all grades, including three colleges, twenty-two high schools, and numerous normal training and theological institutions. The registered attendants in these schools number 42,529.

Specia effort s made fo the nstru t on and d opm n o h ung peop e o he Chu ch there now being 483 chapters of the Epworth League with 20,253 enrolled members, and 5,345 organized Sunday Schools with an enrolment 159 520.

Th publishing interests of the Church are represented in two presses at Madras and Lucknow the former doing work in four vernaculars and the latter in six. The periodicals issued cover the interests of both the evangelistic and the educational field, the Indian Witness, the Junior Methodist and Methodist Education being in English, while the Kaukab-i-Hind, the Rafiq-i-Niswan, the Bal Hit Karak, and other periodicals for women and children are issued in several of the vernaculars.

The governing body of the Church is the General Conferences held quadrennially in America in which the ten conferences now existing in India are represented by twenty-eight delegates. The polity of the Church in India looks forward to complete independence under the general governing body, there at present being but about three hundred and fifty American men and women as compared to 430 ordained and 3,162 unordained Indian and Burmese workers At present the area is divided into seventy-two districts each in charge of a superintendent and among whom are many Indians. The work is supervised by four Bishops, elected by the General Conference, and resident as follows: Bishop Frank W. Warne, Bangalore; Bishop John W. Robinson, Delhi; Bishop Frederick B Fisher, Calcutta; and Bishop Brenton T. Badley, Bombay.

THE AMERICAN WESLEYAN METHODIST MISSION, Sanjan, Thana District Headquarters. Stations with missionaries, Danda, Maroli, *via* Nargol, Thana District. Vapi (Daman Road Station), Surat District. Pardi 6, Surat District. Six missionaries on field. Two on furlough. One under appointment. Four main stations. Two boarding schools. One industrial school. One Bible school. Six village schools. *Superintendent*. C.B. Harvey, Sanjan, Thana District.

THE REFORMED EPISCOPAL CHURCH OF AMERICA at Latipur and Lucknow, U. P., has 2 Missionaries, 4 Outstations, 1 Hospital, 2 Orphanages and a membership of nearly 100.

The Methodist Protestant Mission began work in India in 1919, has a staff of Seven missionaries, and one under appointment. The work is confined to Dhulia Taluka, with on lans on Dh a Th two b a d g s hoo d s e an t c work and medical work. *Secretary*: Miss Mildred Miskimen, Dhulia, West Khandesh.

THE WESLEYAN METHODIST MISSIONARY SOCIETY commenced work in India in 1817 (Ceylon in 1814). The Mission in India, apart from Ceylon, is organised into 7 District Synods with 2 Provincial Synods. There is a large English work connected with the Society, 20 ministers giving their whole time to Military work and English churches.

The districts occupied include 68 main stations in Bengal, Madras, Mysore, Bombay Punjab, Central Provinces, Hyderabad (Nizam's Dominions), United Provinces and Burma The Burma Synod has recently been attached to the Ceylon Provincial Synod for purposes of administration. Its statistics are no longer included in this statement. The European staff numbers 102 with 75 Indian Ministers and 791 Indian workers; Communicants 18,518, and total Christian community 101,245. There are 7 large numbers of organised Churches many of which are self-supporting.

Educational work comprises 3 Christian Colleges, students, 2,033; 5 Theological Institutions, students, 329; 7 High Schools, pupils 3,427, 14 Industrial schools, pupils, 400; 923 Elementary schools, with 26,180 scholars In Medical work there are 3 hospitals, 12 dispensaries, 1,127 in-patients and 65,431 out-patients.

The Women's Auxiliary carry on an extensive work in the places occupied by the W M M. S There are 93 women workers from abroad of whom 16 are qualified doctors. The Indian women workers number 382. There are 109 girls' day schools with 13,377 pupils and 28 boarding schools with 1,979 boarders There are several philanthropic institutions for the rescue and training of women. The Women's Auxiliary manage 12 hospitals and 9 dispensaries, which had 8,041 in-patients and 97,533 out-patients. The cost of the work to the Women's Auxiliary in 1925 was nearly £ 25,000

THE FREE METHODIST MISSION of North America—Established at Yeotmal, 1893, operates in Berar with a staff of 19 Missionaries and 42 Indian workers. Organised churches 4, 1 Theological school and 5 Elementary schools, and 2 Anglo-Vernacular schools and Dispensaries 3. *Secretary*: Rev. Elizabeth Moreland, Yeotmal, Berar.

THE SALVATION ARMY.

For many years the operations of the Salvation Army in India were under the immediate direction of eight Territorial Commanders, in part responsible to Commissioner Booth-Tucker, as Special Commissioner for India, and in part to International Headquarters. The General recently decided to divide the country into four distinct Commands, each under its own Territorial Commissioner and directly responsible to International Headquarters.

Northern India.—The area under this command is the S. A. work in the whole of the Punjab and the United Provinces with Headquarters at Lahore.

In addition to an extensive evangelistic work in the Punjab, and in several centres in the United Provinces, there are a number of Settlements for the Criminal Tribes in the United Provinces (where this important work was first introduced) and several also in the Punjab

In the Punjab is situated an agricultural settlement consisting of a large village of 8[illegible]0 inhabitants who cul[illegible] [illegible] 000 a[illegible] [illegible] and, in which they will gradually acquire proprietary rights, the Government having given it to the Salvation Army on easy terms. This is proving to be very successful.

The oversight of a large tract of country in the Punjab, comprising some two thousand acres of land, has been handed to the Salvation Army, for the purpose of establishing a Colony.

Other industries include Weaving Schools, Agricultural, and Fruit Farms, Day and Boarding Schools, a Home for stranded Europeans, and for British Military Soldiers, 2 Hospitals and 4 Dispensaries.

Village Centres occupied, 1,783; Officers, and Employees, 572; Social Institutions, 23.

Territorial Headquarters: S. A., Ferozepore Road, Lahore, Punjab.

Territorial Commander: Colonel Himmat Singh (Baugh).

Chief Secretary: Lt.-Colonel Dilkri Singh (Melling).

Western India.—The three Territories of Bombay, Guzerat, and Maratha now form the Territory of Western India.

Besides the distinctly evangelistic operations, there are established a large General Hospital—Thomas Emery Memorial—several Dispensaries, at which during the year about 2[illegible],000 patients are treated, over 210 Day and Boarding Schools, a Home for Juvenile Criminals, an Industrial and Rescue Home for Women, Conditionally Released Prisoners' Home, Weaving Schools; a Factory for Weaving, Warping, and Reeling Machines, and a Land Colony having a population of some hundreds of Salvationists.

Corps, 310; Outposts, 475; Officers, 526, of whom 461 are Indian; employees and teachers, 32, Social Institutions, 15.

Territorial Headquarters: S. A. Moreland, Road, Byculla, Bombay.

Territorial Commander: Commissioner Horskins.

Madras and Telugu Territory.—This Territory comprises the city of Madras and work situated in the Nellore, Guntur, Kistna and West Godaveri Districts of the Northern Circars of the Madras Presidency, also Bangalore.

There are the following agencies at work:—257 Corps and outposts, *viz*., places in which work is systematically done.

1 V[illegible] P[illegible]m[illegible] Schools 4 Se[illegible]m[illegible]nts for Crimin[illegible] T[illegible]b[illegible] h a total population of 3 8[illegible] [illegible]ndus[illegible] a[illegible] Sch[illegible]ls f[illegible]r [illegible]h[illegible]dren of Criminal Tribes. 1 Rescue Home. 1 Silk Farm, where some 60 boys are being instructed in the various branches of sericulture, 2 institutions for the training of officers and 3 boarding school for boys and 1 for girls.

1 Trading Department, where cloth, leather goods, furniture, carpets, silk, lace, etc the products of Industrial Institutions, are disposed of.

Territorial Headquarters: The Salvation Army, Broadway, Madras.

Territorial Commander: Colonel N. Muthiah

Chief Secretary: Major E. Maslin.

The South Indian Territory of the Salvation Army comprises the vast stretch of country to the south of the line drawn from Pondicherry, skirting the State of Mysore, to the most southerly point of Bombay Presidency, though the real sphere of operations is in Travancore, that in Cochin and in Tinnevelly District adjoining Travancore. The work had a very humble beginning in Travancore being commenced principally for the well-being of the coolies and the labourers, but it has gradually increased and extended. The entire inhabitants of certain villages have become Salvationists and to-day representatives of the Army are carrying on the work in 1,159 different villages In connection with the work in the villages a number of Village Halls have been erected, also several Officers' Quarters.

In the villages round Nagercoil a number of women have been taught lace making and needlework; also a similar industry is being carried on at Neyyattinkara. The Medical work plays an important part in the work of the Salvation Army. Major (Dr) Noble is in charge of this branch, which consists of the mother Hospital known as the Catherine Booth Hospital, and seven branch Hospitals. As the Major is on furlough, Doctor Rendle is now in charge of the Hospital assisted by Doctor Round. Since last year the work has been increased by the installation of the X-Ray and Diathermy apparatus.

There are 1,149 Corps and Outposts, *i.e* villages in which work is systematically carried on; 1,009 Officers and teachers. 302 Day Schools, 3 Boarding Schools, 1 Hostel, 4 Training Garrisons and 2 Homes of Rest for European and Indian Officers.

Territorial Headquarters The Salvation Army Kuravanconam, Trivandrum.

Territorial Commander: Colonel (Mrs) A. Trounce.

Laws and the Administration of Justice

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was tl[illegible] spirit, to prepare a penal code. T[illegible] years elapsed before it became la[illegible] which period it underwent revision [illegible] successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 18[illegible] These Codes are now in force

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A P Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided to settle the question of jurisdiction over European subjects in such a way as to remove from the [illegible] and completely every judicial [illegible], which is based merely on race [illegible] This decision, embodied in the [illegible], aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884 by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains, but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the [illegible] to claim to be tried by a [illegible]ury of

not less than half the number shall be Europeans or Americans......Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered" Since 1836 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (SS443-463) the new Chapter XXXIII (SS443-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code.

High Courts.

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court, with three or more judges; in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are ab e by [illegible] g the returns by sending for [illegible] gs, and by calling fo explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal court-styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts and every sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates, in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions, on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction; his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into [illegible] Law Ad[illegible] of the High Court, Vakils and Attorneys Solicitors of High Courts,

and Pleaders, Mukhtars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the *original side of some of the chartered High Courts.* Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar.

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex-officio*, by the Advocate-General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore, and Rangoon a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts similar machinery is generally in use. Pending an opportunity of detailed inquiries in India, these general descriptions must suffice. The recommendations of the Indian Bar Committee of 1923 relating [illegible] Councils for the [illegible] have been recently [illegible] Courts Act, XXXVIII of 1926.

Composition of the Bar.

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development. "During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands, while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors, of whom more than 130 were Indian and the remainder English, and 230 advocates, of whom 16 only were English and the remainder Indian."

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General and Government Solicitor for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister): the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General in Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power.

The supreme power of Parliament to legislate for the whole of India cannot be questioned. In practice, however, this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q.v.) To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature, but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations, having all the cogency of Acts, for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only.

Bombay Judicial Department—*contd*

THE INDIAN POLICE

The police administration in India is in the hands of the Provincial Governments in their Reserved Departments. The numbers in the force are about 200,000 officers and men. In *addition to these there are about 30,000* officers and men of provincial military police, of whom more than half belong to Burma, the remainder being in Bengal and Assam. The North West Frontier Constabulary is an armed semi-military force *maintained by the Government* of India in the N. W. Frontier Province. Its Chief Officer is the Commandant, under whom are Assistant Commandants. The total cost of maintaining the Force has greatly risen *in recent years on account of increases of pay* and allowances made on account of the increased cost of living. The total cost of the Civil Police in 1924, the latest year for which figures are available, was Rs. 10,62,05,638. The cost of military Police force by Provincial revenues in the same year was Rs. 1,36,02,471. In large cities the Force is concentrated and under direct European control; in the mofussil the men are scattered throughout each District and located at various Outposts and Police stations. The smallest unit for administrative purposes is the Outpost which generally consists of 3 or 4 Constables under the control of a Head Constable. Outpost Police are maintained to patrol roads and villages and to report all matters of local interest to their superior, the Sub-Inspector. They have no

Distribution of Police.—The following table shows the area of each Pro of Police of all ranks employed in it in 1925-26, the latest year for w published :—

—	Square miles.
Bengal	76,843
Assam	53,015
United Provinces	106,295
Punjab	99,846
North-West Frontier Province	13,419
Central Provinces and Berar	99,876
Burma	233,707
Madras	142,260
Bombay	123,621
Bihar and Orissa	83,161
Baluchistan	54,228
Ajmer-Merwara	2,711
Coorg	1,582
Delhi	593

Organisation of Police.

The Police Station Officer (the Sub-Inspector) is responsible for the investigation of all cognisable crimes, that is to say, all offences in which the Police can arrest without a warrant from a Magistrate, which occur within his jurisdiction; he is also held responsible for the maintenance of the public peace and the prevention of crime. From the point of view of the Indian Ryot, he is the most important Police Officer in the District and may rightly be considered the backbone of the Force.

Superior to the Sub-Inspector is the Inspector who holds charge of a Circle containing 4 or 5 Police Stations. His duties are chiefly those of supervision and inspection. He does not ordinarily interfere in the investigation of crime unless the conduct of his subordinates renders this necessary.

The Inspector is usually a selected and experienced Sub-Inspector. Each District contains 3 or 4 Circles, and in the case of large Districts, is divided into 2 Sub-divisions—one of which is given to an Assistant Superintendent of Police, a European gazetted Officer. The Police Force in each District is controlled by a District Superintendent of Police, who is responsible to the District Magistrate (Collector or Deputy Commissioner) for the detection and prevention of crime and for the maintenance of the public peace, and, to his Deputy Inspector-General and Inspector-General, for the internal administration of his Force. Eight or ten Districts form a Range administered by a Deputy Inspector-General, an officer selected from the ranks of the Superintendents. At the head of the Police of each Province is the Inspector-General who is responsible to the Local Government for the administration of the Provincial Police.

Separate but recruited from the District Force is the Criminal Investigation Department, which is under the control of a specially selected European Officer of the rank and standing of a Deputy Inspector-General. The Criminal Investigation Department, usually called the C. I. D., is mainly concerned with political inquiries, sedition cases and crimes with ramifications over more than one District or which are considered too important to leave in the hands of the District Police. It is a small force of Sub-Inspectors and Inspectors who have shown their ability and intelligence when working in the mofussil and forms in each Province a local Scotland Yard.

The larger Cities of Calcutta, Bombay, and Madras have their own Police Force, independent of the Inspector-General of Police, and under the control of a Commissioner and 2 or more Deputies. For Police purposes each city is divided into divisions; in Calcutta each division is in charge of a Deputy Commissioner of Police; in Bombay and Madras of a Superintendent, these officers being selected from the European ranks of the City Force. In Bombay, however, the Superintendents are Gazetted Officers, and two of them are Indians. Each division is sub-divided into a small number of Police Stations, the station being in charge of an Inspector assisted by Deputy Inspectors, Indian Sub-Inspectors and European Sergeants.

The Supreme Government at Delhi and Simla keeps in touch with the Provincial Police by means of the Director of Criminal Intelligence and his Staff. The latter do not interfere in the Local Administration and are mainly concerned with the publication of information regarding international criminals, inter-provincial crime and Political enquiries in which the Supreme Government is interested.

Recruitment.—The constable is enlisted locally. Certain castes are excluded from service and the formation of cliques by filling up the Force from any particular caste or locality is forbidden. In some Provinces a fixed percentage of foreigners must be enlisted. Recruits must produce certificates of good character and pass a medical test. They must be above certain standards of physical development. The constable rises by merit to the rank of Head Constable and, prior to the Police Commission, could rise to the highest Indian subordinate appointments. Since 1906, his chances of promotion have been greatly curtailed; this has certainly lowered the standard coming forward for service in the Force in the lower ranks.

The Sub-Inspector, until 1906, was a selected Head Constable, but Lord Curzon's Commission laid down that Sub-Inspectors should be recruited direct from a socially better class of Indians. In most Provinces, eighty per cent. of the Sub-Inspectors are selected by nomination, trained for a year or 18 months at a Central Police School, and, after examination, appointed direct to Police Stations to learn their work by actual experience. It is too early to judge this system by results, but it has no doubt great disadvantages and undetected crime in India is increasing rapidly.

An Inspector is generally a selected Sub-Inspector. Direct nomination is the exception, not the rule.

The Deputy Superintendent, a new class of officer, instituted on the recommendation of the Commission, is an Indian gazetted officer and is the native Assistant to the District Superintendent of Police. He is either selected by special promotion from the ranks of the Inspectors or is nominated direct, after a course at the Central Police School.

Prior to 1893, the gazetted ranks of the Force were filled either by nomination or by regimental officers seconded from the Army for certain periods. In 1893, this system was abandoned and Assistant Superintendents were recruited by examination in London. On arrival in India, they were placed on probation until they had passed their examinations in the vernacular, in law, and in riding and drill. The establishment of Police Training Schools in 1906 has done much to improve the training of the Police Probationer, and selection by examination has given Government a better educated officer but open competition does not reveal the best administrators and should be tempered, as in the Navy, by selection.

Internal Administration.—The District Force is divided into 2 Branches—Armed and Unarmed. As the duties of the armed branch

n of g ard ng l a e sec ing ea s re and p o e and p a g g dange us gang of da o s a e n n e and c atrolled on a m a ba They a armed and drilled and taught to shoot afte military methods. The unarmed branch are called upon to collect fines magisterially inflicted serve summonses and warrants, control traffic, destroy stray dogs, extinguish fires. enquire into accidents and non-cognizable offences. STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking

into account the differences under which the police work added. they can at the best in imperfectly the degree of suc the police carry out that im their duties, which consists i of crime These considera emphasized in recent orders ment of India. Subject to th the figures below may be indication of the volume of the police, and of the wide dif the conditions and the stat different provinces. They are nizable crime —

JAILS

Ja[il] adm[inistr]ation in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments [illegible] Indian Penal Code for [illegible] [in]clude transportation, [illegible] imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large **central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails** at the head-quarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General, he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October, 1915, says:—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee.—Since the introduction of the reformed constitution the maintenance of the Indian Prisons falls within the sphere of provincial Governments, and is subject to all India legislation. The obvious advisability of proceeding along certain general lines of uniform application led lately to the appointment of a Jails Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation; of recruiting a better class of warders, of providing education for prisoners; and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders; the adoption of the English system of release on license in the case of adolescents; and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners; the provision of separate accommodation for prisoners under trial; the institution of the star-class system, and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extramural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid

warders and con t ward s a.. .mpioyed. W th th s bound up the question of a special class of well-behaved prisoners which was tried from 1905 onwards in the Thana Jail.

Juvenile Prisoners.—As regards "youthful offenders"—*i.e.*, those below the age of 15—the law provides alternatives to imprisonment and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit: and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore ineligible for admission to the reformatory school, has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1905, a special class for selected juveniles and young adults was established at the Dharwar Jail in Bombay; in 1908 a special juvenile jail was opened at Alipore in Bengal; in 1909 the Meiktila jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces; and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases; a special reformatory system for "juvenile adults" had, for example, been in force in two central jails in the Punjab since the early years of the decade, and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report, published in 1921, was summarised in the Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—If any fresh attempt at colonisation is made, it should be in an entirely new locality. A fresh attempt at colonisation in the Middle Andaman is not recommended. The retention of the settlement at Port Blair on the present lines is not recommended. The entire abandonment of the Andamans as a place of deportation is not recommended. Deportation to the Andamans should cease, except in regard to specially dangerous prisoners and any others whose removal from Indian jails is considered by the Government to be in the public interests. The existing restrictions as to age and physical condition of prisoners sentenced to transportation to the Andamans should, unless special medical grounds exist in any particular case, cease to apply. The Indian Penal Code should be amended by the substitution of rigorous imprisonment for transportation. In provinces where the available prison accommodation will not permit of the immediate cessation of deportation of all but selected prisoners, the Star class should be the first, and the habitual the last, to be detained in Indian jails. No female should in future be deported to the Andamans, and those now there should be brought back to India and distributed among the Provinces to which they belong. In those Provinces where the jails are insufficient to detain prisoners now deported, additional accommodation should be provided as soon as possible.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic

comfort to the pe p e I s therefore of para mount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first as-

certaining whether there is work f Commitment to settlements should, possible, be by gangs not by indivi is desirable to utilise both Governm private agency for the control of settle

The variations of the jail population in British India during the five years en are shown in the following table :—

——	1925.	1924.	1923.	1922.
Jail population of all classes on 1st January	128,314	126,478	134,286	126,917
Admissions during the year	536,219	536,428	535,590	639,001
Aggregate	664,533	662,906	669,876	765,918
Discharged during the year from all causes	534,779	534,455	543,398	631,628
Jail population on 31st December ..	129,754	128,451	126,478	134,290
Convict population on 1st January ..	110,310	109,230	114,817	106,117
Admissions during the year	158,130	158,466	158,336	185,092
Aggregate	268 440	267,696	273,153	291,209
Released during the year	153.997	155,219	161,166	173,313
Transported beyond seas	616	571	329	1,514
Casualties, &c.	2,089	2,340	2,428	3,244
Convict population on 31st December.	111,395	110,390	109,814	114,817

More than one half of the total number of convicts received in jails during 1925 came from the classes engaged in agriculture and cattle tending, about 130,000 out of 158,000 are returned as illiterate.

The percentage of previously prisoners was 20·28 as against 19·(while the number of youthful offe from 342 to 348. The following table nature and length of sentences c admitted to jails in 1923 to 1925 :—

Nature and Length of Sentence.	1925.	1924.
Not exceeding one month	32,499	30,675
Above one month and not exceeding six months.	64,286	64.933
„ six months „ „ one year ..	31,429	30.972
„ one year „ „ five years ..	23,299	24,975
„ five years „ „ ten „ ..	3,581	3,856
Exceeding ten years	350	514
Transportation beyond seas—		
(a) for life	1,540	1,475
(b) for a term	117	114
Sentenced to death	988	942

The total daily average population for 1925 was 109.227, the total offences dealt with by criminal courts was 273, and by Superintendents 127,095. The corresponding figures for 1924 were 108,884,214 and 133,665. respectively.

The total number of corporal punishments showed a decrease, viz., from 243 to 210. The total number of cases in which penal diet (with and without solitary confinement) was prescribed was 4,988 as compared with 6,385 in the preceding year.

Total expenditure increased Rs. 1,58,81,900 to Rs. 1,66,58,718 cash earnings increased from Rs. 1, Rs. 24 71 694, there was consequ decrease of Rs. 2,08,577 in the n Government.

The death rate in 1924 excluding mans was 14·42 and including of th both being below those for 1923 (16·0) and the decennial mean (2 23·2*).

The Laws of 1927

BY

RATANLAL AND DHIRAJLAL,

Editors, "Bombay Law Reporter."

1. Indian [illegible] Act.—Following th[illegible] by the Civil Justice [illegible] two changes of a far-reaching character. An amendment has been made in section 20, whereby payment of interest, made after January 1, 1928, gives a fresh starting point of limitation, only if the fact o[illegible] in the handwriting of t[illegible] ayment or is in writing [illegible] The second amendment made is in section 21. An acknowledgment of liability made by a Hindu widow or other limited owner ensures against the reversioner. And where a liability has been incurred by the manager of a joint Hindu family on behalf of a Hindu undivided family it is deemed to have been made on behalf of the whole family (s. 3). The scope of Article 132 has been enlarged by an explanation which says that *Malikana* and *Haqqs* and the value of agricultural or other *produce* secured by a charge on immoveable property are money charged upon immoveable property (s. 4).

2. The Indian Registration (Amendment) Act.—In the year 1926, the Privy Council held in *Dayal Singh* v. *Indar Singh* (28 Bom. L.R. 1372) that where an agreement for the sale of immoveable property contained a recital of payment of earnest money or purchase money, it was compulsorily registrable. The effect of the amendment is to negative that decision and a retrospective operation is given to the amendment. Thus, such agreements are valid even if they are not registered.

3. *Steel* Industry (Protection) Act.—The Act provides two safe-guards for the protection of steel industry in India. Where it appears that steel articles of British manufacture are being imported into India at prices which render ineffective the protection granted to similar articles manufactured in India, the duty on the former articles may be further raised; and the same protection is given against similar articles of foreign manufacture imported into India. The Governor General in Council is empowered to appoint a Commission before March 31, 1934, to enquire if the further continuance of such protection is necessary.

4. The Currency Act.—This Act is the outcome of the recommendations made by the Royal Commission on Indian Currency and Finance. It raised a volume of keen controversy on the question of ratio. The *rupee* is here stabilized at the rate of *1s. 6d.* per rupee. As a step towards the attainment of that goal the sovereign and half-sovereign are demonetized in India (s. 2). Sections 4 and 5 lay on the Government of India a statutory obligation to buy gold or to sell gold or gold exchange at the gold points at the accepted gold parity of the rupee, *i.e.*, Rs. 21-3-10 per tola of fine gold.

5. The Finance Act.—The Act gives the annual validity to the rates of postage and the scale for the levy of the income tax and super tax now existing. It has made some important changes. The stamp duty of one anna on cheques is abolished from July 1, 1927, the import duty on rubber stamps and rubber seeds and on hides and tea has been abolished. The import duty on unmanufactured *tobacco* has been raised from Re. 1 to Rs. 1-8-0 per lb. while that on motor cars and motor cycles is reduced from 30 per cent to 20 per cent and on tyres and tubes is reduced from 30 per cent to 15 per cent *ad valorem*.

6. The Madras Salt (Amendment) Act.—In 1889, a flat rate of five per cent was levied on salt to meet the expenses incurred in maintaining the preventive staff. Since then, the duty on salt was reduced by fifty per cent and the pay of the staff had to be raised. The Act therefore abolishes the old rate and leaves it to the Central Board of Revenue to impose such a rate as would cover the expenses of the preventive staff.

7. The Provident Funds (Amendment) Act.—The benefit of the Provident Funds Act is here extended to persons employed in educational institutions or employed by bodies existing solely for educational purposes.

8. The Sea Customs (Amendment) Act.—The Sea Customs Act allowed a partial rebate of duty on goods which were deteriorated or damaged prior to entry only in those cases where the duty was leviable *ad valorem*; this privilege is now extended to duty leviable on quantity and not on value. This affects sugar and paper.

9. The Indian Limitation Second (Amendment) Act.—The amendment removes a great hardship in the law of execution of decrees. An application for execution has always the tendency to lengthen out, and in many, if not in most, of the cases its duration is more than three years; but in order to keep the decree alive, the decree-holder was compelled to file a fresh application to execute the decree, regardless of the result of the pending application. This state of affairs only served to complicate matters. Now, however, the decree-holder has a period of three years from the date of disposal of his pending application within which to file another application to execute the decree. Further, where a decree-holder has recovered an amount in execution but has been ordered by the Appellate Court to refund it, the period of limitation to enforce the refund runs from the date of the appellate decree.

1[illegible]. [illegible] and Amending Act.—[illegible] Air Force in India has [illegible] placed on the statute [illegible] s placed on a par with

pay compensation to each pilgrim at the rate
of Re. 1 per every completed day (209 C). If
the proposed ship is unable to start on the
appointed day, it is competent to the owner
to substitute another ship of the same class
and tonnage with the permission of the Pilgrim
Officer (s. 209 D).

15. The Indian Divorce (Amendment) Act.—
Till recently, there was no officer corres-
ponding with King's Proctor in England. The
necessity for a King's Proctor was felt in Bom-
bay in a divorce case tried by the late Sir Din-
shaw Davar some time ago. It is he who keeps
a watch over divorce proceedings and makes
it his business to see that no fraudulent or
collusive decrees are snatched from the Court.
Section 17-A is now added to the Indian Divorce
Act. It creates the office of King's Proctor.
It is his duty to show cause why a decree for
dissolution of marriage should not be made
absolute or should not be confirmed.

16. The Indian Forests Act.—This Act
consolidates the Indian Forest Act of 1878 and
its six amending Acts. Part I sets out the
definitions of terms used in the Act. Part II
deals with the constitution of reserved forests
over the lands in which Government claim
proprietary rights and the governance of such
rights (ss. 3 to 27). The next Part (s. 28) deals
with village forests, in which the village commun-
ity have all the rights owned by Government
in reserved forests. On such forests, the villagers
have a right to take timber or other forest
produce or pasture. Then come protected
forests in which also Government have pro-
prietary rights, though they are not reserved
forests. In such forests Government grant
licenses to persons to cut and remove the trees
or to take the forest produce on payment of
money, or cutting grass and pasturing of cattle
and doing other things (s. 32.) The commission
of any offence with regard to such forests is
visited with the penalty of imprisonment
for six months or fine which may
extend to five hundred rupees (s. 33). Chapter
V provides for control over forests and lands
not being the property of Government. Section
39 empowers Government to impose duty on
timber and other forest produce; and the Chapter
following defines the powers of control of timber
and other forest produce in transit. Chapter
VIII deals with the collection of drift and strand-
ed timber. Cattle trespassing in a reserved or
protected forest may be seized and impounded
by any forest or police officer (s. 70). The
constitution and powers of forest officers are
defined in Chapter XI. Section 79 enacts that
every person who is interested in a forest or
who lives in a village adjacent to a forest is
bound when called upon to assist a forest officer
to extinguish a forest fire or to prevent it from
spreading or to prevent the commission of any
forest offence. Government have the right
to recover any money due to them for any forest
produce as if it was an arrear of land revenue
(s. 82), and they possess a lien for it on the
forest produce (s. 83).

17. The Indian Lighthouse Act.—There
were three separate Coast-light Acts for Madras,
Burma and Sind. Each worked on a different
principle, and all lacked in co-ordination.
Difficulty was experienced in an uniform system

f collecting light-house dues. It is, therefore, found necessary to enact one unifying Act. The superintendence and management of all general light-houses are vested in the Governor General in Council (s. 5), who is also given the control of all local light-houses (s. 7). The same authority has the power to levy and collect all light-house dues (s. 9). If the Master of any ship refuses to pay such dues, the Customs Collector may seize the ship and detain the same until they are paid (s. 12). The light-dues payable at one port are recoverable at another (s. 16). The Master or owner who evades payment of light-dues is liable to pay a fine five times the amount of the payment (s. 17). Any ship belonging to His Majesty or the Government or to a Foreign Prince or State and not carrying cargo or passengers for freight or fares or any ship of a tonnage of less than fifty tons are exempt from payment of light-dues (s. 18).

18. The Indian Succession (Amendment) Act.—Sections 223 and 236 of the Indian Succession Act have been so amended that now the consent of the husband is no longer necessary before probate or letters of administration can issue to a married woman. Section 10 has been added to the Married Women's Property Act, whereby a husband is not liable for the wife's breach of trust or devastation unless he has acted or inter-meddled in the trust or administration.

19. The Presidency Towns Insolvency (Amendment) Act.—In the working of the above Act two defects were discovered which led to divergence of view between different Indian High Courts. The first one was as to the conflict between sections 7 and 36, which was responsible for differing views between Calcutta and Madras High Courts. It is now settled in favour of Calcutta by enacting that debts can be realized by the insolvency Court from the debtors of the insolvent only when those debts are admitted. The second amendment legalises the practice that existed in Bombay and Rangoon High Courts of calling upon an insolvent to file lists of creditors and debtors before the passing of an adjudication order.

20. The Bamboo Paper Industry (Protection) Act.—The main object of this Act is effectually to exclude newsprint paper from any protective tariff. At the same time the protection cord is tightened round printing paper which contains no mechanical wood pulp as well as writing paper including ruled or printed forms and account and manuscript books and the binding therefor. A rate of one anna per pound or an *ad valorem* rate of 15 per cent whichever is higher is imposed on them.

21. The Indian Securities (Amendment) Act.—Where a person holding a Government security loses it, there is an elaborate machinery to prevent fraud, before a duplicate security is issued to him. This machinery could well be avoided when the owner is dead, by his legal representative taking out a succession certificate to his estate. Such a representative also has now to pursue all the intricacies provided before he succeeds in obtaining a duplicate of a lost or stolen security. It is also made clear that in such a case no interest can be claimed in respect of any period which has elapsed after the earliest date on which the demand could have been made for the payment of the amount due on such security.

22. The Societies Registration (Amendment Act.—The benefit of the Societies Registration Act is extended to Societies for the diffusion of political education.

23. The Indian Tariff (Cotton Yarn) Amendment Act.—Japanese yarn, which forms eighty per cent of the total import of foreign cotton yarn, is depressing the Indian mill industry to a great extent. There has been a five per cent *ad valorem* duty on such yarn but it is not enough to protect the Indian Industry. An alternative duty of 1½ anna per pound has therefore been imposed which is to remain in force till March 31, 1930. It is expected that by then the double shift of women workers in Japan will cease, and there will remain no necessity of additional protection.

24. The Indian Tariff (Amendment) Act.—The import duty on machinery and mill stores used in textile industry is removed. The 2½ per cent import duty on printing machinery and material is also removed.

25. The Criminal Law (Amendment) Act.—Early in 1927, one Raj Pal published a book called 'Rangila Rasul' which contained a scurrilous attack on the prophet of Mahomed. He was convicted by the Magistrate under s. 153A of the Indian Penal Code, but was eventually acquitted by the High Court of Lahore. About the same time a newspaper editor published another attack on the prophet in "Risala Vartman." He too was convicted by the Magistrate. In view of the previous ruling of the Lahore Court above referred to a special bench of two Judges was constituted for hearing the appeal. The accused's conviction was upheld. These two cases revealed the unsatisfactory state of the law with reference to scurrilous writing. A new section 295A was therefore, added to the Indian Penal Code under which any person who, with the deliberate and malicious intention of outraging the religious feelings of any class of people, by speech or writing, insults the religion or the religious feelings of that class, is liable to the punished with imprisonment which may extend to two years, or with fine or with both. Scurrilous literature can be proscribed and copies forfeited by Government. A prosecution under the section can start only after sanction from Government.

26. The Cantonments (Amendment) Act.—A number of minor amendments has been introduced into the Cantonments Act. The President of a Cantonment Board retains his office though he is temporarily absent from the cantonment. The Local Government has the power to remove any member of the cantonment board who incurs a disqualification or who keeps absent from the meetings for three consecutive months or who being a legal practitioner appears in a case against the cantonment board. It is now the privilege of the Local Government to permit the levy of any ordinary tax by the cantonment board. It is permissible to the

u d n d d n ank in preference to the Imperial Bank provided the previous sanction of the Local Government is obtained to such a course.

27 Indian Emigration (Amendment) Act—The object of this is to simplify the inspection of emigrants and to bring into force the resolutions arrived at the eighth session of the International Labour Conference at Geneva.

28 The Income-tax (Amendment) Act.—This Act remedies a defect which has been discovered in the assessment of tea companies for the purpose of income tax.

29 The Aden Civil and Criminal Justice High Court Jurisdiction (Amendment) Act.—An appeal now lies to the High Court of Bombay against the judgment or order of the Resident in Aden or of an Additional Sessions Judge when such appeal is allowed by the Criminal Procedure Code. But no appeal shall d d d m fin m n exceed Rs. 500 An appeal against acquittal shall lie to the High Court. The Resident has now the power of reserving any point of law arising in any proceedings pending before him for the opinion of the High Court.

30 The Indian Divorce Second (Amendment) Act—Hitherto, relief under the Indian Divorce Act could be obtained only by the Christian party to a mixed marriage. The Act is now amended so that even the non-Christian party to such a marriage may apply for relief under the Act.

31. The Assam Labour and Emigration (Amendment) Act.—The expenditure of the Assam Labour Board is met from a cess on employers in Assam. Owing to changed conditions of labour in Assam, the cess could not be levied from garden-sardars. The Act is so amended that the cess can be levied from the garden-sardars

---

Labour.

Various causes have combined to give added **importance** to the great group of human activities concentrated under the generic term of Labour India is still a predominantly agricultural country and more than seventy per cent. of its people are dependent on the soil for their livelihood. Nevertheless a process of industrialisation has gone steadily forward. Calcutta and Bombay are great manufacturing cities Whilst the jute mills dominate Calcutta and the cotton mills Bombay, there has grown up round these industries a substantial body of other manufactories. Another considerable manufacturing centre has developed at Cawnpore, with cotton, wool and leather factories. The textile industry of Bombay has overflowed into the mofussil, and Ahmedabad and Sholapore are considerable centres of manufacture, with a lesser one at Broach. In the Central Provinces the cotton mills of Nagpur are famous throughout India. The Province of Bihar and Orissa is the centre of the great coal mining trade, having absorbed the bulk of the coal mines formerly included in the Province of Bengal. It also embraces the most remarkable example of scientific industrialism in India in the works of the Tata Iron and Steel Company at Jamshedpur, where in what was jungle fifteen years ago considerable city is springing up, which will produce over a million tons of steel a year, and house subsidiary industries which combined with the iron and steel works will probably maintain a city of a quarter of a million in the near future. The railway works of the North-Western Railway form the core of the industrialism of the Punjab, where other manufactories are developing. The industrial expansion in India may be judged from the number of factories coming under the operation of the Indian Factories Act of 1911 as amended by the Act of 1922, which amounted to 6,406 for the whole of British India during the year 1924 and rose in 1925 to 6,926. The number of operatives in the same years were 1,455,592 and 1,494,958 respectively, the figures being of the daily average. The industrial development of the Punjab is certain in the comparatively near future to receive considerable impetus from the fruition of vocational education and the completion of the vast hydro-electric schemes.

Social Consciousness.

Side by side with this industrialization there has grown an increased social consciousness of the responsibility of the community towards Labour. The Government of India passed its first Factory Act in 1881 and amended it in 1891. But experience showed that these Acts permitted considerable abuses and largely as the result of the agitation raised by *The Times of India* in Bombay in 1905 against the excessive hours worked in the Bombay textile mills inquiries were set afoot which resulted in the passing of a new Act which limited the hours of labour in 1911. With the constitution of the League of Nations, India as a signatory thereto became a participator in the decisions of the League on Labour

India was represented at the International Labour Conference held in Washington in 1919 and by her ratifying various conventions it became obligatory on her to enact legislation giving effect to the decisions of the Conference. Another International Labour Conference was held at Genoa in 1920 to consider a number of questions relating to seamen, such as the hours of labour, manning scales, accommodation, the provision for finding employment and other cognate questions and the Third and Fourth Sessions of the Conference were held at Geneva in 1921 and 1922. The Fifth Session of the Conference assembled on 22nd Oct. 1923 and dealt with only one item of importance—factory inspection. The Sixth Session of the International Labour Conference was held in Geneva from the 16th June to the 5th July 1924. Forty countries were represented at the Conference. The agenda of the Conference comprised (1) Development of facilities for utilisation of workers' leisure. (2) equality of treatment for national and foreign workers as regards compensation for accidents, (3) weekly suspension of work for twenty-four hours in glass manufacturing processes where tank furnaces are used; and (4) night work in bakeries. The Seventh Season was held at Genoa on the 21st May 1925. The agenda consisted of four items—(1) the report by the Director of the International Labour Office; (2) equality of treatment for national and foreign workers as regards compensation for accidents; (3) weekly suspension of work for 24 hours in glass manufacturing processes where tank furnaces are used; and (4) night work in bakeries. The Eighth Session of the Conference was held at Geneva on the 26th May 1926 and the Ninth Session immediately after on the 7th June. The Eighth Session dealt with the question of the simplification of the Inspection of Emigrants on Boardships. The Ninth Session was devoted entirely to the consideration of maritime problems—the main question dealt with being the International Codification of the Rules relating to Seamen's articles of agreement, and general principles for the inspection of the conditions of work of seamen. India was represented at all of these Conferences. In 1922 India was admitted as one of the eight countries of industrial importance after protracted examination of the grounds of her claim by experts appointed by the League of Nations. India therefore assumes responsibility for giving effect to the decisions of these Conferences if she ratifies them.

There has been a considerable extension of what is known as **Welfare Work**, and although this so far depends on the individual activities of employers of labour the work is progressing well. The Sixth International Labour Conference which dealt with the question of the utilisation of workers' spare time resolved that the International Labour Office should collect periodic information on the action taken in various countries for the development of facilities for the proper utilisation of the time during which workers are not actually employed. In May 1926 the Government of India requested all Local Governments to collect information on this subject from employers' and employees' associations and associations of social workers who conduct welfare work for the benefit of workers. The results of this enquiry which the Government of India hope to publish during the course of this year will be of considerable interest. Further there is the nascent Trade Union movement in India. This movement lies rather more on the surface than in deep roots, but it flares up in times of labour unrest and is nominally at all events focussed in The All India **Trade Union** Congress. The frequency of strikes and the lack of any means to hasten a solution have given rise to careful investigation of the possibility of establishing Boards of Conciliation and Arbitration. The increase of industrial unrest in the winter of 1920-21 led to the stimulation of public interest in labour questions. The fact that several of the more protracted strikes occurred in public utility services strengthened the demand that some efforts should be made towards a solution of the problem. In nearly every strike or lock-out of importance which has occurred in the last six years there has been a fairly strong demand from some section of the public for reference of the points at issue to arbitration. The last few years have therefore seen a remarkable change in the attitude of the State and the community towards Labour, which under the more democratic constitution which now obtains is assured of a hearing in the Legislatures.

INDUSTRIAL SAFETY AND INSPECTION.

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881, as amended in 1891. The chief provisions of the amended Act were Local Governments were empowered to appoint inspectors of factories, and certifying surgeons to certify as to the age of children. A mid-day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts, and Sunday labour was prohibited, subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half; their employment between 8 p.m. and 5 a.m. was prohibited, as a general rule, except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were limited to seven, and their employment at night time was forbidden; children below the age of nine were not to be employed. Provision was made for the fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

Hours Fixed.

The next Factory Act was finally passed into law as Act XII of 1911.

The new Act extended the definition of "factory" so as to include seasonal factories working for less than four months in the year, shortened the hours within which children, and, as a general rule, women, may be employed, and further restricted the employment of woman by night by allowing it only in the

of ... and ... It ... number of new provisions for securing the health and safety of the operatives, making inspection more effective, and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act for the first time applied a statutory restriction to the hours of employment of adult males by laying down that, subject to certain exceptions, "no person shall be employed in any textile factory for more than twelve hours in any one day." It is also provided in the case of textile factories that no child may be employed for more than six hours in any one day, and that (subject to certain exceptions, among which are factories worked in accordance with an approved system of shifts) no person may be employed before 5-30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children).

The Amending Acts of 1922 and 1923.

The ratification by India of the conventions adopted by the International Labour Conference held at Washington in 1919 necessitated radical revision of the Indian Factories Act of 1911. This was undertaken during the year 1921 and the Indian Factories Amendment Act, 1922 (II of 1922) introduced a series of important ... hours ... children ... work for ... number of small factories, drastic restriction of the exempting provisions, etc. The Act was further amended in 1923. The principal object of the Amending Act of 1923 was the removal of a difficulty which had arisen in connexion with the law relating to the weekly holiday.

The Amending Act of 1926.

The experience gained during the three years which immediately followed the revision of the Act in 1922 indicated that the Amending Act had worked smoothly on the whole and that the main principles followed in 1922 commanded general acceptance. It was not considered necessary, therefore, to modify any of the main principles of the Act; but several administrative difficulties had arisen in connexion with some sections of the Act—one such difficulty relating to Section 21 which provided for intervals of rest. In practice it had proved difficult to enforce the provisions of this section in some industries. Local Governments were asked in June 1923 to consider a possible solution of the difficulty and to bring to the notice of the Government of India any difficulties which might have arisen in connexion with other provisions. On receipt of their replies, a Conference of Chief Inspectors of Factories was convened. The Conference recommended a number of alterations designed by allowing greater elasticity in some directions and by increasing control in others to make for smoother working. The Factories Amendment Act of 1926 was, therefore, based on the recommendations of that Conference and ... received from the Local Governments. The more important alterations effected include the widening of the definition of 'Factories' so as to bring within the control of the Act such establishments as Electrical Generating Stations, Water Works, etc., the prevention of the issue of age certificates by Certifying Surgeons to children who are not fit for employment, the prevention of cleaning machinery in motion even by men in cases where Local Governments are of opinion that the work is attended by danger to the operatives; a clearer definition of the periods prescribed for intervals of rest, and while still preventing the employment of children in two factories on the same day, the permitting of women to work in two factories on the same day provided that the limits for hours of work are not exceeded.

The Present Law.

In the following paragraphs it is intended to give the more important provisions of the present law on the subject by combining the Act of 1911 with the Amending Acts of 1922, 1923 and 1926. The Amending Act of 1922 came into force on the 1st July 1922 and that of 1926 on the 1st June 1926. The Act extends to the whole of British India including British Baluchistan and the Sonthal Parganas.

Hours of Employment.

Rest periods in factories.—(1) In every factory there shall be fixed,—

(a) for each person employed on each working day—

(i) at intervals not exceeding six hours, periods of rest of not less than one hour, or

(ii) at the request of the employees concerned, periods of rest, at intervals not exceeding five hours, of not less than half an hour each, the total duration of the periods of rest on that day not being less than one hour for each period of six hours' work done,

Provided that, in lieu of the period provided under sub-clause (i) or sub-clause (ii) there may be fixed per each male person employed for not more than eight and a half hours on each working day, at the request of the employees concerned and with the previous sanction of the local Government, a period of rest of not less than half an hour so arranged that no such person shall work for more than five hours continuously and

(b) for each child working more than five and a half hours in any day, a period of rest of not less than half an hour.

(2) The period of rest under clause (b) shall be so fixed that no such child shall be required to work continuously for more than four hours.

Weekly Holiday.—(1) No person shall be employed in any factory on a Sunday, unless—

(a) he has had, or will have, a holiday for a whole day on one of the three days immediately preceding or succeeding the Sunday, and

(*b*) e manag o the fa tory has pre ous o h S nday o t e subst tu ed day, h. e. .. earlier, given notice to the Inspector of his intention so to employ the said person and of the day which is to be substituted and has at the same time affixed a notice to the same effect in the place mentioned in section 36.

Provided that no such substitution shall be made as will result in any person working for more than ten consecutive days without a holiday for a whole day.

(2) Where in accordance with the provisions of sub-section (1) any person is employed on a Sunday in consequence of his having had a holiday on one of the three days preceding that Sunday, that Sunday shall, for the purpose of calculating the weekly hours of work of such person, be deemed to be included in the preceding week.

Employment of Children.—With respect to the employment of children in factories the following provisions shall apply:—

(*a*) no child shall be employed in any factory unless he is in possession of a certificate granted under section 7 or section 8 showing that he is not less than twelve years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate;

(*b*) no child shall be employed in any factory before half-past five o'clock in the morning or after seven o'clock in the evening;

(*c*) no child shall be employed in any factory for more than six hours in any one day.

Employment of Women.—With respect to the employment of women in factories the following provisions shall apply:—

(*a*) no woman shall be employed in any factory before half-past five o'clock in the morning or after seven o'clock in the evening;

(*b*) no woman shall be employed in any factory for more than eleven hours in any one day.

Prohibition of Employment of Person in two Factories on Same Day.—No person shall employ, or permit to be employed, in any factory any child or, save in such circumstances as may be prescribed, any other person whom he knows, or has reason to believe, to have already been employed on the same day in any other factory.

Hours of Employment to be fixed.—The manager of a factory shall fix specified hours for the employment of each person employed in such factory, and no person shall be employed except during such hours.

Limitation of Working Hours per Week.—No person shall be employed in a factory for more than sixty hours in any one week.

Limitation of Working Hours per Day—No person shall be employed in any factory for more than eleven hours in any one day.

Exceptions.

Where it is proved to the satisfaction of the Local Government—

(*a*) that any class of work in a factory is in the nature of preparatory or complementary work which must necessarily be carried on outside the limits laid down for the general working of the factory or

(*b*) that the work of any class of workers is essentially intermittent; or

(*c*) that there is in any class of factories any work which necessitates continuous production for technical reasons; or

(*d*) that any class of factories supplies the public with articles of prime necessity which must be made or supplied every day; or

(*e*) that in any class of factories the work performed by the exigencies of the trade or by its nature, cannot be carried on except at (i) stated seasons or (ii) at times dependent on the irregular action of natural forces;

the Local Government may, subject to the control of the Governor-General in Council, by notification in the local official Gazette, exempt on such conditions, if any, as it may impose, and in such area as may be specified in the notification,—

in case (*a*) such class of work from all or any of the provisions of sections 21, 27 and 28;

in case (*b*) work of the nature described from all or any of the provisions of sections 21, 22, 26, 27 and 28.

in case (*c*) work of the nature described from the provisions of sections 21, 22 and 28.

in cases (*d*) and (*e*) such class of factories from the provisions of section 22.

in case (*e*) (ii) such class of factories from the provisions of section 26.

The system of inspection is being steadily improved by the appointment of more whole-time inspectors with good technical qualifications in the principal industrial centres. The principle of appointing women as factory Inspectresses has already been accepted by the Government of Bombay and a beginning was made in the year 1924 by the appointment of Dr. Tehmina I. H. Cama as a whole-time Inspectress of Factories.

The Government of India have repealed the Workmen's Breach of Contract Act of 1859 with effect from 1st April 1924.

The Indian Mines Act, 1923.—The Indian Mines Act, 1923, received the assent of the Governor-General on the 23rd February 1923. It extends to the whole of British India, including British Baluchistan and the Southal Parganas, and came into force on the first day of July 1924. By this Act the definition of a mine was made clear, and the weekly hours of employment were limited to 60 hours for work above ground and 54 hours for work below ground.

INDUSTRIAL HOUSING

In m nd st[illegible] in India the question of proper and adequate housing is engaging the attention of all public bodies and governments to an increasing extent. Employers themselves are becoming increasingly alive to this burning question and whenever finances permit tenements are constructed for the housing of the workmen. In cases where housing is provided the amounts charged for rent are just sufficient to cover the interest charges on the capital outlay. In Bombay City, where the housing question was one of great difficulty a few years ago, the City Improvement Trust and the Development Directorate of the Government of Bombay have done much useful work in endeavouring to solve the problem. The scheme originally outlined by the Development Directorate for Industrial Housing aimed at a construction programme of 50,000 tenements providing accommodation for a quarter million people and to be completed within a period of eight years. This scheme was conceived in the boom period when labour conditions in Bombay were probably abnormal. By the end of December 1926 the Directorate had 16,541 tenements completely ready for occupation out of which 5,182 were let. The total number of chawls completely ready is 207. Government have decided that until the tenements now provided are fully occupied no additional land is to be taken up for Industrial Housing and that no new schemes are to be embarked upon without Government approval.

The average economic rent works out at Rs. 16 per mont All the tenements are now Nahanis. The rents fixed for month for each tenement, var at Worli to Rs. 9-8-0 at D this basis there is an annual lo s lakhs and this is being met fro and other sources.

The City Improvement Trust also made very good progress of providing Industrial hous had a total number of 8,493 te the end of December 1926, on tenements were let for living shops, 59 as godowns and 16 tenements were reserved for Muccadams, for offices and Superintendents' Quarters. T each tenement inclusive of a varied from 125 square feet to but the majority of the tenemen with the maximum floor spac average rent for a tenement in Trust Chawl works out at Rs. 5- rents vary from Rs. 4-4-0 to maximum permissible populati a total of 8,251 tenements ha 37,699. The actual popul these tenements, at the en 1926, was 26,068 or 23,779 w adults.

INDUSTRIAL DISPUTES.

Complete statistics in connexion with Industrial Disputes are now available for the whole of India. The importance that is being attached to the weapon of strike by the workmen in this land may be gathered from the figures published in respect of the industrial disputes in British India for which statistics have been collected.

The year 1925 was one of the worst years in the history of Industrial relations in the country. The number of disputes reported was 134 as against 133 in the preceding year The number of workers involved in these disputes was 270,423 and the number of working days lost amounted to 12,578,129.

The corresponding figures for 1924 were 312,462 and 8,730,918. The increase was due entirely to the strike in the Bombay

[illegible]

cent. were successful in whole or presents a slightly higher propor strikes than in the precedi corresponding figures for 1926 w They indicated that there wa strife in that year than in any o The number of strikes recorded was lower than that of any when the collection of statis The total number of working d strikes and lock-outs was a lakhs against an average of preceding five years. In few of the strikes were the workn gaining any concession.

CONCILIATION AND ARBITRATION.

Of recent years much attention has been paid to the settlement of industrial disputes. The baffling character of such disputes is that they are so often sporadic, breaking out without warning, grievances being formulated after striking instead of before. When such strikes occur there is no organised body of workers with whom to negotiate. The Government of Bengal took the leading part and in March 1921 appointed a committee which laid stress on the value of Works Committees and institution of Conciliation Courts disputes in public utility serv favoured the appointment of a p the Local Government could dra stituting a Board to enquire into The Bombay Government, which explored the ground informally, similar committee in November reported in February 1922.

TRADE DISPUTES LEGISLATION.

The valuable suggestions made by an Industrial Disputes Committee appointed in Bombay were considered both by the Government of Bombay and by the Government of India. On the 11th March 1922, the Hon. Sir Maurice Hayward, Home Member of the Bombay Government, made a statement in the Bombay Legislative Council to the effect that details were being worked out by the Government of Bombay in connexion with the drafting of a Bill to give effect to the recommendations of the Committee, and that, as soon as Government were satisfied on these points, legislation would be introduced in the Local Council as early as possible after the sanction of the Government of India had been obtained.

In July 1924, the Government of India informed the Government of Bombay that as they considered that this subject was one for All-India legislation, the Government of India were themselves preparing a Bill for early introduction in the Legislative Assembly and that the Local Government should not introduce the Bill which it contemplated doing in its own Council.

The Government of India prepared a Bill to make Provision for Enabling the Investigation and Settlement of Trade Disputes and this was published in August 1924. This Bill may be considered as being very wide and comprehensive in scope and extent. It covers all workmen including employees of the Government of India and of any Local Government. An important distinction is made between the general body of workmen by dividing these into employees in Public Utility Services and other employees. In the case of public utility services and in those services specially notified as such by the Governor-General in Council, it is provided that it shall not be lawful for any employer to declare or enforce a lockout or for any workman to take part in a strike on account of any dispute unless due notice of the proposed lockout or strike has been sent to the prescribed officer. Such strikes or lockouts are not permitted until the expiry of thirty days after notice has been served in cases where no order has been made for reference of the dispute to a Board and until the expiry of ninety days after notice has been served in cases where such an order has been made or until the expiry of seven days after the publication of a report by a board whichever of the two dates may be earlier.

There is no separate provision in the Bill for Courts of Enquiry, Board of Arbitration or for Conciliation. The functions of these two separate institutions in Industrial Disputes legislation are vested in the Government of India Bill with one body which is to be called the Board of Investigation and Conciliation. The members of these Boards are to be selected from permanent panels of (1) representatives of employees, (2) representative of employers, and (3) persons to be appointed as Chairmen. The Government of India and each Local Government are to construct their own panels. The unctions of these Boards are to endeavour to bring about a settlement of any dispute by a thorough investigation of the circumstances and causes of each dispute. The Government of India do not appear to be inclined to present this Bill to the Legislative Assembly just at present. No official declaration in connexion with this matter has been published but a special remark made by His Excellency the Viceroy in his speech at the annual meeting of the Associated Chambers of Commerce of India and Ceylon at Calcutta in 1925 is significant. His Excellency said : "The question of providing means of conciliation in trade disputes has been thoroughly explored, but it would be premature to legislate on this question until the Trades Union Bill has become law."

TRADE UNION LEGISLATION.

In March 1921, Mr. N. M. Joshi, M.L.A., moved a Resolution in the Legislative Assembly recommending that steps should be taken to provide legislation for the registration of Trade Unions and for the protection of Trade Unions. In September 1921, the Government of India addressed all Local Governments for their views, after consulting the interests concerned, on the question of the principle of such legislation and with regard to the form which it should take. On receipt of their replies, a Bill was drawn up and this was again circulated for opinion. The Bill to provide for the Registration of Trade Unions and in certain respects to define the Law Relating to Registered Trade Unions in British India was introduced in the Simla Session of the Legislative Assembly on the 31st August 1925 and was referred to a Select Committee. It was passed by the Legislative Assembly on the 8th February and by the Council of State on the 25th February and received the assent of the Governor-General on the 25th March 1926. The Trade Union Act was brought in to force on 1st June 1927.

The following paragraphs give the more important provisions of the Act.

DEFINITIONS.

Registrar.—"Registrar" means a Registrar of Trade Unions appointed by the Local Government under section 3, and "the Registrar," in relation to any Trade Union, means the Registrar appointed for the province in which the head or registered office, as the case may be, of the Trade Union is situated.

Trade Dispute.—"Trade Dispute" means any dispute between employers and workmen or between workmen and workmen, or between employers and employers which is connected with the employment or non-employment, or the terms of employment or the conditions of labour, of any person, and "workmen" mean all persons employed in trade or industry whether or not in the employment of the employer with whom the trade dispute arises.

Trade Union.—"Trade Union" means any combination, whether temporary or permanent formed primarily for the purpose of regulating the relations between workmen and employers or between workmen and workmen, or between employers and employers, or for imposing restrictive conditions on the conduct of any trade or business and includes any federation of two or more Trade Unions.

REGISTRATION.

Mode of Registration.—Any seven or more members of a Trade Union may, by subscribing their names to the rules of the Trade Union and by otherwise complying with the provisions of this Act with respect to registration, apply for registration of the Trade Union under this Act.

Provisions to be contained in the Rules of a Trade Union.—A Trade Union shall not be entitled to registration under this Act, unless the executive thereof is constituted in accordance with the provisions of this Act, and the rules thereof provide for the following matters, namely:—

(a) the name of the Trade Union,

(b) the whole of the objects for which the Trade Union has been established,

(c) the whole of the purposes for which the general funds of the Trade Union shall be applicable, all of which purposes shall be purposes to which such funds are lawfully applicable under this Act;

(d) the maintenance of a list of the members of the Trade Union and adequate facilities for the inspection thereof by the officers and members of the Trade Union;

(e) the admission of ordinary members who shall be persons actually engaged or employed in an industry with which the Trade Union is connected, and also the admission of the number of honorary or temporary members as officers required under section 22 to form the executive of the Trade Union;

(f) the conditions under which any members shall be entitled to any benefit assured by the rules and under which any fine or forfeiture may be imposed on the members;

(g) the manner in which the rules shall be amended, varied or rescinded;

(h) the manner in which the members of the executive and the other officers of the Trade Union shall be appointed and removed;

(i) the safe custody of the funds of the Trade Union, an annual audit, in such manner as may be prescribed, of the accounts thereof and adequate facilities for the inspection of the account books by the officers and members of the Trade Union; and

(j) the manner in which the Trade Union may be dissolved.

Cancellation of Registration.—A certificate of registration of a Trade Union may be withdrawn or cancelled by the Registrar—

(a) on the application of the Trade Union to be verified in such manner as may be prescribed, or

(b) if the Registrar is satisfied that the certificate has been obtained by fraud or mistake, or that the Trade Union has ceased to exist or has wilfully and after notice from the Registrar contravened any provisions of this Act or allowed any rule to continue in force which is inconsistent with any such provision, or has rescinded any rule providing for any matter provision for which is required by section 6:

Provided that not less than two months' previous notice in writing specifying the ground on which it is proposed to withdraw or cancel the certificate shall be given by the Registrar to the Trade Union before the certificate is withdrawn or cancelled otherwise than on the application of the Trade Union.

RIGHTS AND LIABILITIES OF REGISTERED TRADE UNIONS.

jects on which General Funds may be t—The general funds of a Trade Union not be spent on any other objects than the wing, namely :—

) the payment of salaries, allowances and expenses to officers of the Trade Union,

) the payment of expenses for the administration of the Trade Union, including audit of the accounts of the general funds of the Trade Union;

) the prosecution or defence of any legal proceeding to which the Trade Union or any member thereof is a party, when such prosecution or defence is undertaken for the purpose of securing or protecting any rights of the Trade Union as such or any rights arising out of the relations of any member with his employer or with a person whom the member employs;

) the conduct of trade disputes on behalf of the Trade Union or any member thereof;

) the compensation of members for loss arising out of trade disputes;

) allowances to members or their dependants on account of death, old age, sickness, accidents or unemployment of such members,

) the issue of, or the undertaking of liability under policies of assurance on the lives of members, or under policies insuring members against sickness, accidents or unemployment;

) the provision of educational, social or religious benefits for members (including the payment of the expenses of funeral or religious ceremonies for deceased members) or for the dependants of members;

) the upkeep of a periodical published, mainly for the purpose of discussing questions affecting employers or workmen as such;

) the payment, in furtherance of any of the objects on which the general funds of the Trade Union may be spent, of contributions to any cause intended to benefit workmen in general, provided that the expenditure in respect of such contributions in any financial year shall not at any time during that year be in excess of one-fourth of the combined total of the gross income which has up to that time accrued to the general funds of the Trade Union during that year and of the balance at the credit of those funds at the commencement of that year; and

) subject to any conditions contained in the notification, any other object notified by the Governor-General in Council in the *Gazette of India*.

nstitution of a separate Fund for Poli- purposes.—(1) A registered Trade Union constitute a separate fund, from contribu- separately levied for or made to that fund, from which payments may be made, for the promotion of civic and political interests of its members, in furtherance of any of the objects specified in sub-section (2).

(2) The objects referred to in sub-section (1) are :—

(a) The payment of any expenses incurred either directly or indirectly, by a candidate or prospective candidate for election as a member of any legislative body constituted under the Government of India Act or of any local authority before, during or after the election in connection with his candidature or election; or

(b) the holding of any meeting or the distribution of any literature or documents in support of any such candidature or prospective candidature; or

(c) the maintenance of any person who is a member of any legislative body constituted under the Government of India Act or of any local authority; or

(d) the registration of electors or the selection of a candidate for any legislative body constituted under the Government of India Act or for any local authority; or

(e) the holding of political meetings of any kind, or the distribution of any political literature or political documents of any kind.

(3) No member shall be compelled to contribute to the fund constituted under sub-section (1); and a member who does not contribute to the said fund shall not be excluded from any benefits of the Trade Union or placed in any respect either directly or indirectly under any disability or at any disadvantage as compared with other members of the Trade Union (except in relation to the control or management of the said fund) by reason of his not contributing to the said fund; and contribution to the said fund shall not be made a condition for admission to the Trade Union.

Criminal Conspiracy in Trade Disputes—No officer or member of a registered Trade Union shall be liable to punishment under sub-section (2) of section 120-B of the Indian Penal Code, in respect of any agreement made between the members for the purpose of furthering any such object of the Trade Union as is specified in section 15, unless the agreement is an agreement to commit an offence.

Immunity from Civil Suit in certain Cases—(1) No suit or other legal proceeding shall be maintainable in any Civil Court against any registered Trade Union or any officer or any member thereof in respect of any act done in contemplation or furtherance of a trade dispute to which a member of the Trade Union is a party on the ground only that such act induces some other person to break a contract of employment, or that it is in interference with the trade, business or employment of some other person to dispose of his capital or of his labour as he wills.

(2) A registered Trade Union shall not be liable in any suit or other legal proceeding in any civil court in respect of any tortious act done in contemplation or furtherance of a trade dispute by an agent of the Trade Union if it is proved that such person acted without the knowledge of or contrary to express instructions given by, the executive of the Trade Union

Proportion of Officers to be connected with the Industry.—Not less than one-half of the total number of the officers of every registered Trade Union shall be persons actually engaged or employed in an industry with which the Trade Union is connected:

Provided that the Local Government may by special or general order, declare that the provisions of this section shall not apply to any Trade Union or class of Trade Unions specified in the order.

Returns.—(1) There sh to the Registrar, on or befo be prescribed, a general st the prescribed manner, of al diture of every registered Tr year ending on the 31st da ceding such prescribed date and liabilities of the Trad such 31st day of March T be prepared in such form such particulars as may be

(2) Together with the there shall be sent to the R showing all changes of officer Union during the year to wh ment refers, together also rules of the Trade Union cor of the despatch thereof to

(3) A copy of every alt rules of a registered Trade to the Registrar within making of the alteration

WORKMEN'S COMPENSATION.

The Workmen's Compensation Act of 1923 received the assent of the Governor-General on the 5th March 1923. The Act extends to the whole of British India including British Baluchistan and the Sonthal Parganas and came into force on the first day of July 1924. The original Bill contained two distinct parts Chapter II which lay outside the general scheme for compensation, contained provisions modifying the ordinary law in respect of employers' liability and making it easier for injured workmen to sue their employers for damages in the Civil Courts. These clauses applied only to workmen, who come under the workmen's compensation provisions, so that, although they omitted the limit to damages which governs their counterpart in England, they were not likely to be much used. This Chapter II was deleted from the measure by the Legislative Assembly. Ten classes of workmen are covered by the Act. Some of these, such as members of fire brigades, telegraph and telephone linesmen, sewage workers and tramwaymen, are small, and as the definition of seaman is limited to those employed on certain inland vessels, only a very small proportion of Indian seamen will benefit by the bill. The five important classes are the workers in factories, mines, docks and on railways, practically all of whom are included, and those engaged in certain types of building work, notably the construction of industrial and commercial buildings, and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more than Rs. 300 a month are excluded, except on the railways. Power is taken to include other hazardous occupations by notification from time to time. Compensation is to be given, as in the English Act, for personal injury by accident arising out of and in the course of employment. It is also to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of workmen contracts a scheduled disease, it will usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally difficult to get compensation will have to prove that the and directly" from the diseases scheduled at prese poisoning and phosphorus compensation can be claim than those scheduled is dou is made capable of extensio ing was thus added to Sch cation, dated 28th Septembe

Scales.—The scales fo generous, they are based recommendation of a Comm June. Adults (*i.e.*, persons 15) and minors are distin and compensation is subje in every case. For death th months' wages of the decease to a maximum of Rs 2,500 For a minor who is killed payable is the fixed sum of R is completely disabled for lif wages if he is an adult and if he is a minor, subject in mum of Rs. 3,500 If he injuries that do not comp he gets proportions of the certain clearly recognizabl loss of limb, these propo Thus a workman, who lost the elbow would receive 60 specified above, subject Rs. 2,100. If his pay was sum would come to Rs 756 are lump sums. Of much are the provisions for the n mon injuries Statistics of industry generally in oth that 50 per cent. of injuries disablement for not more per cent. cause disablemen 10 days, but ultimately disa result in permanent injuries fatally A large proportion excluded by the provision th is to be paid on account of disablement. The great

maining cases will fall under the scale for temporary disablement. The rate of payment for temporary disablement is half wages for adults and two-thirds wages for minors, subject to a maximum of five years, and for minors, two thirds wages or whole monthly wages after they have attained the age of 15 years, subject in each case to a maximum amount of Rs 30, and to a maximum period of 5 years. This maximum of 5 years is not of great importance, as experience shows that the number of such cases which last more than six months is insignificant. During the first six months of these payments they can only be commuted to a lump sum if both parties agree; after payments have gone on for six months, either party can apply for commutation. In its treatment of the difficult question of dependents the Indian Act allows only husbands and wives, parents and minor children to claim compensation, and it makes the compensation a fixed sum independent of the number of those relations. The administration of the Act and the settlement of disputes is entrusted to special Commissioners, with a very simple procedure wide powers and restricted opportunities for appeals.

Only two Provinces have so far appointed full time Commissioners. In Bengal, Mr. M. H. B. Lethbridge, I.C.S., is the Commissioner for Workmen's Compensation; and in the Bombay Presidency, Mr. N. M. Patwardhan, Barrister-atLaw, has been appointed a full-time Commissioner with an immediate jurisdiction extending over Bombay City, the Bombay Suburban District, the Districts of Ahmedabad, Broach, Surat, Khandesh and Sholapur and the whole of the B. B. & C. I. Railway line coming within the Bombay Presidency. In the Madras Presidency, the Labour Commissioner is also the Commissioner for workmen's compensation In the other Provinces and in the Districts of Bengal and Bombay which are not under the jurisdiction of the Provincial full-time Commissioners, the District Magistrates and Subordinate Judges have been appointed ex officio Commissioners.

The annual report of the working of the Act in the Bombay Presidency including Sind for the year 1926 shows that in addition to 19 applications which were pending at the beginning of the year, 242 applications were filed during the year and 7 were received for disposal from other Commissioners as against two applications pending at beginning, 232 filed and 3 received from other Commissioners during the year 1925. Of these 268 applications, 55 related to fatal accidents, 92 to permanent disablement, 13 to temporary disablement and 101 to distribution of compensation. Five applications related to recovery of compensation under Section 31 and the remaining two were miscellaneous. All but 26 applications were disposed of during the year, the claims paid having been contested only in 102 cases. Out of the contested applications 21 were allowed in full, 54 in part and the remaining 27 were dismissed Of the remaining applications, 7 were transferred to other Commissioners for disposal, 5 were withdrawn, one was dismissed for non-appearance, two were summarily dismissed under rule 21, 124 were admitted by the opposite party and one was allowed ex-parte.

During the year 1926 Rs. 1,38,259-13-6 were deposited of which Rs. 1,17,273 represented the the amount of compensation deposited under Section 8 (1) for fatal accidents and Rs. 20,986-13-6 represented the amount of compensation deposited under Section 8 (2) in respect of non fatal accidents, as against Rs. 93,074-0-0 and Rs. 16,353-7-2 respectively during 1925. Of the total amount of Rs. 1,58,800-3-6, Rs 1,33,238-3-6 were paid out to various claimants thus leaving a balance in the hands of the Commissioner of Rs. 25,262-0-0 at the end of the year. Of the amount of Rs. 1,33,238-3-6 that was paid out Rs. 1,765-0-0 represented the amount of three deposits that were returned to the employers under Section 8 (4), there being no dependants. The total number of cases in which compensation was awarded during the year amounted to 196 of which 194 were in respect of adults and 2 in respect of minors Of these 194 cases, 122 related to fatal accidents, 66 to permanent disablement and 6 to temporary disablement. Of the two cases relating to minors one was for fatal accident and the other for permanent disablement.

At the beginning of the year 1926 there were 9 applications for registration of agreements pending. In addition 214 applications were received during the year. Of these 223 applications, 219 were in respect of permanent disablement and the remaining 4 for commutation of half-monthly payments for temporary disablement. In all 205 agreements were registered involving a total amount of compensation of Rs. 45,499-10-5. During the year 1926 three appeals were filed in the High Court of which one was dismissed under Order XLI rule 3 clause (1) of the Civil Procedure Code. In another the order of the lower court was confirmed and the third was still pending. In a fourth case that was taken up to the High Court as the claim was below Rs. 300 there was no appeal and the party, therefore, chose to file a revision petition under Section 115 of the Civil Procedure Code. The High Court held that the Commissioner was not a Court within the meaning of Section 115 of the Code and therefore dismissed the petition for revision.

Proposed Labour Legislation.

Largely as a result of the demands of Labour in Indian Legislatures in the Press and elsewhere, the Government of India have at present under contemplation the provision of legislation (1) for defining the limits within which wages must be paid: and (2) for the regulation of Deductions made from Wages or Payments in respect of Fines.

The Prompt Payment of Wages.

In September 1924, the Government of India requested all Local Governments to furnish particulars regarding the periods by which wages are paid in organised industries and the delays which are associated with their payment. The results of the enquiry for the Bombay Presidency were published in the issue of the *Labour Gazette* for January 1925 and for all India in a special bulletin issued by the Department of Industries and Labour—Bulletin No. 34, 'Periods of Wage Payment.' The information collected revealed a state of affairs which could not be regarded as other than unsatisfactory. The delays which

[illegible] as to add appreciably to the economic difficulties of the workers.

In July 1926 the Government of India addressed all Local Governments for their views, after consulting the interests concerned, on the provisional proposals drawn up with regard to the form which the legislation for the control of this matter should take. It was pointed out that systematic delays in payment are particularly associated with payments on a monthly basis—a month being the period most commonly employed for the calculation of wages. It is no uncommon thing—in fact, it appears to be the rule in certain industries for monthly wages to be systematically withheld until a fortnight after the close of the month to which they relate, and cases have been reported where wages had been withheld for considerably longer periods. It was suggested to the Government of India that, as the evil is particularly associated with monthly payments, employers should be compelled to adopt shorter periods of wage payments. This was one of the arguments put forward in support of Diwan Chaman Lal's Weekly Payments Bill. This Bill when it was referred to Local Governments for consideration met with such general opposition that the Government of India were compelled to oppose its consideration in the Legislative Assembly. The Government of India do not think that any Bill of this kind is likely to receive the support of public opinion or to prove effective in its operation; but, whilst not accepting the view that the general system of monthly payments is a satisfactory one, they recognise that if the abuses referred to can be checked or eliminated by legislation it is the duty of Government to introduce such legislation.

The scheme outlined proposes to set statutory limits to the time within which wages must be paid. In the case of monthly workers the limit proposed is seven days, for fortnightly workers four days, for weekly workers two days and for daily workers one day. It is suggested that it should be left to the employers subject to the approval of the Local Government, to fix the date on which the month should commence. The difficulties arising out of the fact that in some cases when wages are paid at piece rates intricate valuations may be required to calculate wages are proposed to be met by prescribing that, in such cases, the payment, within the statutory limits laid down, of seventy-five per cent [illegible] wages earned [illegible] should be confined only to such establishments as are covered by the Indian Factories Act and the Indian Mines Act, and that the enforcement of the measure should rest with the inspection staff of the Factories and the Mines Departments through some form of summary procedure.

Regulation of Deductions from Wages for Fines.

In June 1926, the Government of India requested all Local Governments to procure information on the extent of the practice in India by which employers in industrial concerns are empowered to inflict fines upon their workmen. Suggestions have been made in the Central Legislature, in the Press and elsewhere that the system of inflicting fines upon workmen is common in Indian industrial establishments, and that it constitutes an evil of such proportions that steps should be taken either to abolish the system altogether or to reduce it to such dimensions as to prevent abuse.

The experience of Western countries with regard to the subject has in many cases led to more or less elaborate legislation on the subject. The main Provisions of the English Law are contained in the Truck Act of 1896. In several other countries the power to impose fines and make deductions from wages is regulated by law. Sometimes a limit in the shape of a maximum percentage of wages is imposed; generally, deductions can only be made in accordance with a code of regulations duly posted in the factory or other establishment; and frequently the law contains the statutory provision that sums paid as fines must be credited to funds devoted in some manner or other to the benefit of the workers.

The Government of India have not at present sufficient information at their disposal regarding the degree to which the system of imposing fines is prevalent in India, the forms which it takes, or the extent, if any, to which it is in practice abused to enable them to form any definite conclusions. The object of the enquiry is to ask Local Governments to furnish them with such information as they are able to collect on the subject, after consultation with the interests concerned, and to favour them with their views on the desirability of taking any action, legislative or otherwise, to counter any abuses which may be found to prevail.

WAGES.

In Agriculture.—There is much discussion, with no very definite conclusions, as to whether wages have kept pace with the cost of living. Conditions vary so markedly between Province and Province that it is difficult to give exact figures. Different Provincial Govern[illegible] the result [illegible] ne to time, [illegible] into the wages of [illegible] mainly in agricultures. The Labour Office of the Government of Bombay published a Report in 1924 of an Enquiry into Wages in Agriculture which gave the average daily earnings of three classes of agricultural labour, *viz.*, skilled labour, ordinary labour, and field labour, in each of the 26 districts of the Bombay Presidency, separately for urban areas and rural areas, and for each of 23 years from 1900 to 1922. The figures for each year from 1923 to 1926 have been published in the General Administration Reports of the Bombay Presidency. The wages prevailing in other provinces for similar types of labour do not compare unfavourably with wages in the Bombay Pre-

any pa la yea o wn u s made Th s a men e n e n q a a It n t m ant on y am un s a u l p d a e a a o. wa es in different pro- according to the extent of their tion and money wages in Provin- are mainly agricultural are on a han the money wages in Provinces ighly industrialised, i.e., in Bombay . But there is no doubt whatever have risen markedly in all parts ing the last twelve years and that condition of the Indian labourer has The construction of a real wage er is not always indicative of the terial condition of any group of he utility of such an index number ined to a particular comparison given date and provided always o sets of figures showing money he cost of living at two particular ccurately compiled, the real wage er at the later date as compared ondition of the workman at the om d e g es an accu te ead n of he p on f h pu chas ng powe n comp ison w da Ind an publicists constantly that the condition of the Indian labourer to-day is worse than ever it was before. The true fact is that since wages and prices are both variables "real wages" being a func tion of two variables, could only remain at the same level, if the two factors vary propor tionately. But this does not happen and wage changes always lag behind price changes When prices rise real wages rise only slowly to the original level, and when prices fall real wages fall slowly. Consequently the labourer is sometimes better off and sometimes worse off. Comparison of conditions in India to-day with the pre-war year show that during this particular period the condition of the Indian labourers has undoubtedly improved This is amply proved by the figures given below showing the index numbers of daily average wages of skilled labourers, ordinary labourers and field labourers, for urban areas and for rural areas for the Bombay Presidency.

The third Labour Office Enquiry into Wages in the Cotton Mill Indu Bombay, Ahmedabad and Sholapur was held in 1926 on the basis of the Muster of this enquiry will be published in due course.

OFFICIAL ORGANISATION

The Government of India and several Local Govenments have set up special machinery for dealing with Labour issues, and there are Labour officers with the Governments of Bengal, Madras and Burma whilst the Bombay Government, on the advice of the informal committee whose recommendations have been mentioned above, constituted a special Labour Office in the Secretariat.

In a resolution of Government in the Home Department, dated 29th April 1921, the functions of the Labour Office in Bombay were set out as follows :—

(*i*) LABOUR STATISTICS AND INTELLIGENCE.—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lock-outs, and similar matters;

(*ii*) INDUSTRIAL DISPUTES.—As experience and knowledge are gained and the activities of the Labour Office develop, it will promote the settlement of industrial disputes when these arise ; and

(*iii*) LEGISLATION AND OTHER MATTERS RELATING TO LABOUR.—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws. The Labour Office publishes a monthly journal entitled the *Labour Gazette* which is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour in India and abroad. The address of the Labour Office is :—SECRETARIAT, BOMBAY.

Director of Information and Labour Intelligence and Registrar of Trade Unions.—Mr. J. F. Gennings, Bar-at-Law J. P.

Investigators.—Mr. S. R. Deshpande, B.A., B Litt. (Oxford); Mr. N. A. Mehrban, B.A.; (also Asst. Registrar of Trade Unions.) Mr. A. S. Rajan, B.A., LL B.

Lady Investigators.—Mrs. K. Wagh; Miss G. Pimpalkhare ; Miss S. Dabholkhar.

LABOUR ASSOCIATIONS.

ALL-INDIA TRADE UNION CONGRESS.

President.—Mr. C. F. Andrews.

Vice-Presidents.—(1) Mr. Thengdi
(2) ,, Daud
(3) ,, B N. Mukerji

General Secretary.—Mr. N. M Joshi, M.L.A., C/o Servants of India Society, Sandhurst Road, Bombay.

Organising Secretary.—Mr S. H. Jhabvala.

Assistant Secretaries.—(1) Mr. R. R. Bakhle.
(2) ,, S. A. Dange.

Treasurer.—Mr. F. J. Ginwalla, 123, Esplanade Road, Fort, Bombay.

CENTRAL LABOUR BOARD FOR BOMBAY.

President.—Rai Saheb Chandrika Prasad.

Vice-President.—F. J. Jinwalla, B.A., 123, Esplanade Road, Fort, Bombay.

Hon. Gen. Secretary.—S. H. Jhabvala, B.A., 123, Esplanade Road, Fort, Bombay.

The names and addresses of the officials of other trade unions in the Bombay Presidency are published regularly every quarter by the Labour Office in the *Labour Gazette*.

Domestic Servants.

Every person whose name has been registered in the general registry is given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record the termination of his last previous service if any On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry Every servant whose name is registered shall if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various **penalties of fine** as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is liable to a fine not exceeding Rs. 50 or to imprisonment, with or without hard labour, not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the **Straits Settlements**, where its operation has been limited to such local areas as may be declared by the Governor in Council and its application within such areas has been restricted to the class of householders who are expected to desire the benefit of the provisions

Routes between India and Europe

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West *via* Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O., the Anchor Line, the City and Hall Line, the Lloyd Triestino and the British India line. The Natal line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages. There are ordinarily other services between Calcutta and the West, by steamers sailing round Ceylon, and several lines connect Colombo with Europe Of the latter the Orient, the Messageries Maritimes, the Bibby Lines, N. Y. K., Australian Commonwealth, and Royal Dutch Lines are the chief besides the P. & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 15 days *via* Marseilles. The following are the fares which are convertible at approximately current rates of exchange.—

THE SUEZ CANAL.

At the General Meeting of the Suez Canal Company, held in Paris in 1927, the Chairman said that in consequence of the exceptional circumstances benefiting the early part of 1925, operations for the corresponding period of 1926 did not show equally good returns. Fortunately, however, during the remainder of the past 12 months traffic was such that, in the aggregate, 1926 was able to show a diminution of only some 5 372,000 gold francs on 1925 figures. On the other hand, owing to the sterling rate being on the average about 50 per cent. higher in 1926 than during the previous year, receipts during the last 12 months when converted into francs gave a figure much greater than that for 1925—namely, 746,547,805f. (increase of 137,889,930f. on 1925 figures). Expenditure showed an increase of 5,469,843f. being 69,727,176f. in all. This increase was derived in the main from the enlarged expenses in France due to the depreciation of the franc. Work in the canal demanded an increase of about 2,000,000f.

Increase in Dividend—Taking these amounts into account, and after earmarking 49,000,000f. for amortisation funds, with the sum carried forward from 1925, there was a disposable balance of 619,810,035f. Of this sum it was proposed to allocate 598,892,394f. for dividend distribution, whereby a dividend of 544,017f. (42s. net) would be paid to shareholders, against 300f. [illegible] Whilst proposing this [illegible] dividends, they wished to [illegible] and [illegible] [illegible]uld hope that the [illegible] of the exchan[illegible] that should be so, they were firmly convinced that the extraordinary reserve, the constitution of which the shareholders approved during the past years, would enable them to avoid any decrease of revenue of the shares up to the time when the progress of the traffic would take that upward trend which characterized it before the war.

Traffic Figures.—As to general traffic in 1926, there were 4 970 passages through the Canal, representing a net tonnage of 26,060,377 tons, or a falling off of 701,556 tons on figures for the preceding year, and an increase of 950,495 tons on 1924 passages. Traffic in ballast amounted to 2,029,613 tons net, being 7·8 per cent. of the total traffic against 9·6 per cent. in 1925. Although British-owned steamers still head the list, their tonnage has fallen to 1,047,561 tons. Still, this represents 57·4 per cent. of the total. As was the case in the previous year, countries next in order are the Netherlands, Germany and France. Traffic in Port Said of vessels not passing through the Canal amounted to 1,402,000 tons.

There was a diminution of 1 160 000 tons as regards goods carried through the Canal, the decrease only affecting return cargoes. The effect of the English strike was shown by the passage of 200,000 tons of coal from Bengal, Southern Africa, Australia, and Japan; 800,000 tons of rubber were carried. Having regard to the general return to normal currency conditions in Europe, the future outlook was promising.

Record traffic in 1927.—A steady improvement in Suez Canal traffic and revenue returns was noticeable during the first six months of 1927, and a new record was set for tonnage and receipts. The total number of commercial transits through the canal was 2,774, on which tolls of 103,828,000 gold francs were paid, as compared with 2,509 vessels and tolls amounting to 93,560,000 gold francs during the corresponding period of 1926.

Movement of Shipping.—In the 1927 period 14,502,000 tons of shipping passed through the canal, of which 7,668 000 tons were northbound and 6,834,000 tons southbound, whereas in the first half of 1926 the transiting tonnage totalled 13,05 000, of which 7,041,000 tons went northward and 6,014,000 tons southward.

Mail ca s through the ca a cee d 4 500 000 tons and this t tal a m than t f any p eceding six-month period ever recorded in the history of the Suez Canal. The increase was chiefly in German mail services (147,000 tons), of which 78,000 tons was recorded for the Hamburg-America Line, and 68,000 tons for the Norddeutscher Lloyd. There was also an increase of 94,000 tons in British mail vessel traffic, 84,000 tons in Italian, and 62,000 tons in Dutch.

Shipp g o all of t... principal mari nations which participated in the traffic of canal showed increases when compared the corresponding period of 1926. That British registry comprised a larger share of whole than that of all other nations comb and kept its usual rank in the canal traffic 57.1 per cent. of the total traffic, as aga 57.7 per cent. during the 1926 period, follo by vessels of Dutch, German, French, Ital Japanese, United States, and Norwegian re try, in the order named.

Traffic through the Suez Canal, by nationality, during January-June.

Nationality.	1926.		1927.	
	Number of transits.	Net tonnage.	Number of transits.	Net tonna
British	1,380	7,526,000	1 535	8,277,00
Dutch	272	1,431,000	285	1,501,00

Greek	17	48,000	27	81,00
All others	54	227,000	81	319,00
Total	2,509	13,035,000	2,774	14,502,00

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, **the maximum draught of water** allowed to ships going through the **Suez Canal** would be increased by 1ft., making it 30ft. English.

The maximum permissible draught of ships using the Canal was 24·4 feet in 1870; in 1890 ships drawing 25·4 feet could make the passage; and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Matthews and Mr. Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A 40 feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. In June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of 147 feet 6 inches over a length of about 85 mi and to a width of 328 feet over a distance about 20 miles. The latest scheme ma provision for a depth of 40 feet through and for a widening up to 196 feet 8 inches the south section, and the cutting of an app priate number of sidings in the north and cen sections, where a minimum width of 147 6 inches is believed to be sufficient for requirements of the immediate future.

The work of enlarging the capacity of Canal presents no special difficulty on the e neering side. A good deal of sand is occasion driven into the channel at Port Said dur storms, but a remedy for this will be found extension of the west breakwater by ab 2 700 yards at a cost of over £3,000,000. construction of this extension, which has b in hand for the past two years, is making sa factory progress. The Suez Roads are be adequately dredged in accordance with agreement between the Egyptian Governm and the Company.

Almost up to the end of 1915 the works extending the jetty to the west of Port Sa works of capital importance for the protecti of the entry to the Canal, were pushed uninterruptedly. In November, however, want of hydraulic lime, the manufacture artificial rocks for this jetty was interrupt The submarine foundations in stone and rub of the new jetty were, as a matter of fact, co pleted to a length of 2,500 metres; the protect blocks were laid for 1,040 metres, and cemen for over 800 metres. The protection of Channel is thus secured, and there is no n for any apprehension as to its future.

Travel in India.

Thirty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services. The Indian Railways provide facilities on the trunk lines unsurpassed by the *trains-de-luxe* of Europe, and the Indian hotel has grown into a really comfortable caravanserai.

In the touring season, which extends from November to March, there is the attraction of a perfect climate. It is never very hot; in the North indeed it is really cool, it is always fine and fresh and bracing. If there is one country in the world to which that elusive term applies, here we have at the season when the tourist arrives the real "Indian summer." Then there is its infinite variety. India is in no sense a nation and never will be. Its peoples are wide as the Poles asunder, each has its own art, its own architecture, its own customs and its own civilisation. A certain superficial resemblance runs through each; beneath lies a never-ending variety which age cannot wither nor custom stale.

The Grand Tour.—People coming to India for the first time so often ask —"Where shall I go?" Well, wherever else the tourist may go whatever else he should leave out, he should omit nothing on the Grand Tour. It is the foolish custom nowadays to sneer at those who follow the beaten tracks, but the visitor who shuns any part of the orthodox journey across India misses what nothing else can repay. **Bombay** is by far the most convenient point of departure, for here "the world end steamers wait" here is one of the finest cities in the British Empire, and here the traveller can best complete his outfit and arrangements. From Bombay stretch northwards the two great trunk lines of India. One the **Bombay, Baroda & Central India Railway**, leads through the pleasant garden of Gujarat to Ahmedabad, the ancient Moslem capital of the Province containing fine examples of Mahomedans and Jain architecture; thence to Abu for the famous Jain temples of Dilwara, and on to Ajmere, Jaipur and Agra. The other by the **Great Indian Peninsula Railway** carries the tourist over the Western Ghats by a superb mountain railway to Gwalior, whose rock fortress rises like a giant battleship from the plain, and so on to Agra. Of the glories of the Taj Mahal, Agra Fort, and the deserted city of Fatehpur Sikri it were supererogatory to speak. Another easy stage leads **to Delhi** that amazing collection of cities, dominated by the little Ridge where British valour kept the mutinous hordes at bay, and finally drove them from the city by a feat of arms unsurpassed in history. Then from Delhi the East Indian line leads comfortably to Benares, Lucknow and Calcutta with the opportunity of an excursion to Cawnpore, if the spirit moves. The great charm of the Grand Tour is that it reveals the best that India can show. This route has the additional advantage that it fits in with any digressions which the time and purse of the traveller may permit. No one who can spare the time should fail to push northwards from Delhi to Peshawar, where the flower of the army keeps watch and ward over the Khyber, and up the dread Pass to the eyrie where the fort of Ali Masjid bars the way to all invaders. **Calcutta** is the best starting point for Darjeeling, though unfortunately the magnificent mountain panorama visible from there is often obscured at this season by mists. Then from Calcutta two alternatives open. A fine service of mail steamers leads to **Burma**, and one of the unforgettable memories of the East is a voyage down the Irrawaddy from Bhamo or Mandalay to Prome. Again, either direct from Calcutta, or *via* Burma, is an easy route to **Madras** and by way of Madura and Trichinopoly, with their peerless Hindu temples, back to Bombay or on through Tuticorin to **Colombo**. But indeed the possibilities of expanding this tour are endless. Bombay is the best centre for the rock temples of Elephanta, Kenheri, Karli, Ellora and Ajanta. Calcutta is only a short distance from Puri the one Indian temple where there is no caste, and perhaps the most remarkable Hindu temple in the country. From Calcutta also start the river steamers which thread the steamy plains of Bengal and run to the tea gardens of Assam.

SPECIMEN TOURS.

A number of specimen tours in India are given below. They are taken from one of Messrs Thos. Cook & Sons, Ltd.'s publications, from which firm further information may be obtained. The traveller will also find he can obtain assistance from the principal Shipping Agents and Railway Companies, or from Messrs. Cox & Co., Messrs. Grindlay & Co., and Lloyds Bank:

The New Capital.

The transfer of the capital of India from Calcutta to **Delhi** was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India was located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential; its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital were laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhis of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgn.-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1912, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A report by a Town-Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and two large blocks of Secretariats This Government centre has been given a position at Raisina hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Mr. Edward Baker for the Secretariats. The former building will cost approximately Rs. 140 lakhs and the latter groups some Rs. 124 lakhs. To the east of the forum, and below it, will be a spacious forecourt defined by trees and linked on to the great main avenue or parkway which leads to Indrapat Across this main axis will run an avenue to the railway station. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Jama Masjid will form the principal business approach to the present city. At the railway station a place will be laid out around which will be grouped the administrative and municipal offices, the banks, the shops and the hotels The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

For a temporary capital, for the use of the Government of India during the period of the building of the new capital an area was selected along the Alipur Road, between the existing civil station of Delhi and the Ridge. The architecture and method of construction are similar to those adopted in the exhibition buildings at Allahabad in 1910; but the buildings will outlast the transitional period for which they are intended. They will subsequently be an asset of some value.

In October, 1912, by proclamation, there was constituted an administrative **enclave of Delhi** under a Chief Commissioner This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 3,98,269 and of the new area 14,552, or a total of 4,12,821. The population of the Municipal town of Delhi was 2,29,144. The plans of the New Capital allo[illegible] [illegible]0,000. Its [illegible] [illegible]0,000. Sit[illegible] [illegible]rinces and [illegible] own o[illegible] City. T[illegible] pro- lon[illegible] Delhi. Fin[illegible] tect, it has been their aim "to express, within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument." The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian

a u w ho t do ng o en e to the p n p s of st u al tn and a s c un ty

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors have since then increased the cost, the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,367 lakhs of rupees. This amount includes allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January 1923, estimated the total expenditure at Rs. 1,292 lakhs including Rs. 42 lakhs for loss by Exchange. This figure still stands. Actual expenditure up to January 1927, the latest date for which figures have been published, was Rs. 12,43 lakhs, of which Rs. 1,69 12,000 was spent upon the Secretariats.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts may be expected.

Progress of the work.—The construction of New Delhi has made satisfactory progress, having regard to the curtailment of the Budget allotment, in consequence of the war and the return of officers and other establishments to their civil work made possible a considerable speeding up of constructional operations provided money can be provided to pay for them. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General, Central Revenues, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The residential buildings for Government officers and staff of various grades nearly then completed. The whole of the civil side of Government moved for some years in old Delhi entered into their quarters in the new Secretariats on coming down from Simla in November, 1926. The present position is that all Government Departments including the Army Department, and R.A.F. Headquarters, have their offices in the new City buildings, on which the builders are completing the final details, but that Army Headquarters continue in the old "Temporary Secretariat," in Old Delhi. The Members of H. E. the Viceroy's Executive Council, except H. E. the Commander-in-Chief, live in their new official residences in the new capital. H. E. the Viceroy is expected to take up his residence in the new Government House there in the winter of 1929. His Excellency for the present resides at Viceregal Lodge in Old Delhi. The Commander-in-Chief continues at his old residence, Flagstaff House, Old Delhi, and will similarly transfer to New D h a d 9 9 Th Government [illegible] devoted special consideration to the question whether their ordinary annual 5 months' residence in Delhi should be extended each year to 7 months, but up to the end of 1927 had announced no decision.

Art Decorations—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration will be selected. The various schools of art in India, as well as individual artists, have been invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures will be drawn out and painted to full size on canvas, and, if finally approved by the Committee, will be fixed according to the Marouflage process in situ. Other techniques, such as fresco or tempera, are optional. Artists or schools of art, who may send in small scale drawings, have to bear the initial expense of preparing them. If these are approved by the Committee, the out-of-pocket expenses will be paid in addition to a suitable honorarium. Government undertake to pay for the finished pictures done from approved sketches, but give no guarantee that the finished paintings will permanently be preserved. The Committee will consist of Sir John Marshall, Kt., C.I.E., Director-General of Archæology in India, as Chairman, and one or more experts to be nominated by him as members. Government have intimated that historical or allegorical subjects will be given preference over religious ones.

Opinion of the Legislature.—Considerable discussion regarding the new works took place in the Assembly in 1921. The following unofficial resolution was carried:— "This Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary funds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable."

A non-official Member in the Legislative Assembly on 28th September, 1921, at Simla, moved a recommendation to Government "to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate climate throughout the year." This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

H.R.H. the Duke of Connaught, on 12th February, 1921, laid the foundation stone of a large group of parliamentary buildings on a site close to the south-east of the Secretariats. The building is an imposing pile circular in shape, consisting in the main of three horseshoe-shaped Chambers for the Chamber of

P n es Coun o State nd I s at Assemb y e p t y nd surmounted by a large dome over a Central Library connecting all three Chambers.

H. E. the Viceroy (Baron Irwin) proceeded in state to the new Legislative Buildings, henceforward to be known as the Council Buildings and formally declared them open on 18th February 1927. The India legislature began its sessions in them next day.

All India War Memorial.—H. R. H. the [illegible] 10th February, 1921, [illegible] of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes, Park and the construction of the building is well forward but for economy's sake is being proceeded with comparatively slowly.

The Memorial will take the form of a triumphal arch spanning Kingsway, the avenue running down the centre of the Vista. It will generally be similar to the Arc de Triomphe in Paris, but will be simpler in a way which will probably increase its grandeur and dignity. The monument will reach a height of 160 feet and the inner height of the arch will be 87 feet 6 inches and its breadth 70 feet. Over the arch on both fronts will appear in capital letters the single word INDIA and this will be flanked on each side by the initials MCM (i.e., 1900) whilst immediately below them on the left-hand will be the initials XIV (i.e., 14) and on the opposite side the figures XIX (i.e., 19). Above the Arch will be a circular stone bowl 11½ feet in diameter. This is intended to be filled with burning oil on great anniversaries and other occasions so that there will be a shining fire by night and a column of smoke by day. The memorial is solely Indian in purpose and will bear the names of Indian regiments only.

Educational Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still under consideration. To implement it would require a capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary, teaching and residential university of Delhi, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university must be a matter of time and it was, therefore, decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. E. the Viceroy would be able to lay the foundation-stone of the university buildings in November, 1922, but this proved impracticable. The site for the new buildings required has not yet been settled. Government and the University Authorities are examining this point in consultation, particularly with reference to the question whether to build in the new capital or to utilise buildings that may become available elsewhere. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. Its report is with Government but up to the end of 1927 had not been published. For the present, the University is housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until last year.

Freemasonry in India.

In 1728 a *dispensation* was granted by the Grand Lodge *of England* to Geo. *Pomfrett*, Esq., *authorising him to* "open a new Lodge in Bengal." [illegible] further is known but [illegible] the *following* year [illegible] Grand Master of India, *Lodge* was established in 1730, which in the *Engraved Lists* is distinguished by the arms of the East India Company, and is *described* as "No. 72 at Bengal in the East Indies." The next *Provincial Grand Masters* were James *Dawson* and Zech Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the *time of the attack* made on the settlement by *Surajan* Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting *his post*, but, though present at the *retaking of Calcutta* by Admiral Watson and Clive, it is improbable that he *resumed* the duties of his masonic office *after* the calamity that befell the settlement.

The *minutes* of the Grand Lodge inform us that William Mackett, *Provincial* Grand Master of Calcutta, was present at the *meeting* of that [illegible] learn on the [illegible] the "Lodges [illegible] -nith was appointed P G. M. in 1762. At this *period it was* the custom in Bengal "to elect the Provincial Grand Master *annually* by the majority of the votes of the *members* present, from amongst *those who* passed through the different offices of the (Prov.) Grand Lodge and *who had served as* Dep. Prov. Grand Master." This annual election as soon as *notified* to the Grand Lodge of England, was *confirmed* by the Grand Master without its *being* thought an infringement of his *prerogative*. In accordance with this practice, Samuel Middleton was elected (P. G. M. *area*) *in 1767*; but in passing it may be *briefly* observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1763-64 to John Blavitt, Commander of the "Admiral Watson," Indiaman, "for East India *where no* other Provincial Lodge is to be *found*." *Middleton's* election was confirmed October 31st, 1768, and, as the *dispensation* forwarded by the Grand Secretary was looked upon as abrogating *the* practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. *date back only* to 1774, and thus much valuable information is lost to us This *Grand* Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from *only* two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol *of* Ancient Grand Lodge. In 1813 at the *Union* both the Ancients and Moderns in Calcutta combined and gave their *allegiance* to the **United Grand Lodge of England** and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (*No.* 222) was established in Madras in 1752. Three others were also established about 1766. In the same year Capt. Edmund Pascal was appointed P. G. M. *for Madras and its Dependencies* and in *the following* year another Lodge was established at Fort St. George In 1768 the *Athol* (or *Ancients*) invaded this District and in 1782 established a *Provincial Grand Lodge* and both these *Provincial Grand* Bodies continued *working peaceably* side by side until the union *Indeed, though* not generally known, *these two* Grand Bodies made an *attempt at coalition* long before any such *movement* was made by their *parent bodies, the* Grand Lodge of England, and the *Ancient* Grand Lodge, and Malden in his History of Freemasonry in Madras *states* that in a great *measure they succeeded*. At the Union in 1813 all the bodies in Madras gave their *allegiance to the* United Grand Lodge. One event worthy of note was the initiation in 1776 at Trichinopoly of the eldest *son of the* Nawab of Arcot, Umdat-ul-Amarı, who in his reply to the *congratulations of the* Grand Lodge of England *stated* "he considered the title of English Mason as one of the most honourable that he *possessed*." This document is now *stored in* the archives of the *United Grand Lodge*.

Bombay.—Two Lodges were established in this Presidency *during the 17th century*, Nos. 234 at Bombay *in* 1758 and 569 in *Surat* in 1798, *both of which* were carried on the lists until the union when they disappeared. A *Provincial* Grand Master, James Todd, was appointed but there is no *record that* he exercised his functions and *his name* drops out of the Freemasons' *Calendar* in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th *foot which* was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked *to constitute* a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a *dispensation for holding* a Provincial *Grand Lodge* for the purpose of making the Hon Mountstuart a Mason, he having *expressed* a wish to that effect. The *Petitioners* further requested "that his *name might be* inserted in the *body of the* warrant, authorising them *to instal him after* being duly passed and *raised a Deputy* Grand Master of the Deccan." Of the reply to this application no *copy* has *been* preserved. Lodge Benevolence *was* established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay *Artillery* and installed at Poona as No 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the *civilian* element of "Orion" *seceded* and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession *of* some *of* its members, who

obtained a warrant on the recommendation of the parent Lodge, from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded: but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to **Scottish Freemasonry** that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 807 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the **admission of Indian gentlemen** the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1776 by the initiation of Andat-ul-Amari has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1871.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first; the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed

Bengal.

16 Lodges. Rt. W. Bro. The Hon'ble Sir Guy Rutledge, Kt., K. C., District Grand Master.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India, who is elected by the Brethren subject to confirmation by the Grand Master Mason of Scotland. Mr. H. P. Gibbs, A.M.I.E.E., etc., J.P., is the present incumbent of the office, and controls 71 Lodges. Under him the several districts are in charge of the following Grand Superintendents:—

Genl. Sir Claud Jacob. G.Supdt..	Northern India.	
Col. C. E. Luard .. „ „	Central	„
Major A. E. Andrews .. „ „	Southern	„
H. T. Acton .. .. .. „	Eastern	„

The Grand Secretary is R. W. Bro. Arthur W. S. Wise, J.P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1863 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already viz., English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year two other Lodges have sprung into being.

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are ten Lodges, 4 in Calcutta, 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry.—Under England, the District Grand Master in any District is nearly always created also Grand Superintendent, his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation

The five English Districts are constituted as under:—

Bengal.

29 Chapters, Grand Supdt. H. R. Nevill, C.I.E., O.B.E., I.C.S.

Madras.

17 Chapters, A. Y. G. Campbell, C.I.E., C.B.E., V.D., I.C.S.

Bombay.

22 Chapters, M Ex. Comp. Major General H. A. V. Cummins, C.B., C.M.G., Grand Superintendent.

Punjab.

31 Chapters, Most Ex. Compn. C. A. Barron, C.S.I., C.I.E., C.V.O., I.C.S., Grand Superintendent.

Burma.

6 Chapters, The Hon'ble Sir Guy Rutledge, Kt., K.C. Grand Superintendent.

Royal Arch Masonry under Scotland has a [illegible] Craft Freemasonry. The [illegible] of India is at present [illegible] The Hon. Justice A. M. Kajiji under whom there are about 30 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

30 Lodges, C. D. Stewart, D. G. M.

Bombay.

18 Lodges, Rt. W. Bro. Sir Reginald Spence, District Grand Master.

Madras.

13 Lodges, A. Y. G. Campbell, C.I.E., C.B.E., V.D., I.C.S., District Grand Master.

Punjab.

13 Lodges, Rt. W. Bro. Lt.-Col. O. T. Davyst, O.B.E., District Grand Master.

Burma.

6 Lodges, Rt. W. Bro. Arthur Blake, District Grand Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. C. Lodges, but mostly in R. A. Chapters, in which the Excellent R.A.M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons *before* exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor Master in S. C. Craft does *not* recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is *worked* in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are *fourteen* 18th Degree Chapters working in India.

Roman Eagle Conclave No. 43, Bombay.

St. Mary's Commandery No. 43, Bombay.

R. A. Mariner, 72, 514 and 682, Bombay.

R. A. Mariner, 61, 81, 82 and 103, Madras.

R. A. Mariner, 98, 193, 219, 279 and 429, Punjab.

Secret *Monitor*, 14, 21, 36, 37, 40 and 42, Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below:—

D. G. S., Bengal.

G. H. Davis, 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur Palanji N. Davar, P.D.G.W., Kodak House, Fort, Bombay.

D. G. S., Burma.

E. Meyer, D.G.S., E.C., Rangoon.

D. G. S., Madras.

S. T. Srinivasa Gopala Chari, Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

Jas. J. Evans, P.D.G.W., Freemasons' Hall, Lahore.

Scottish Constitution.—For information regarding the *Benevolent* Funds application should be made to Arthur W. S. Wise, J. P., 17, Marzban Road, Bombay.

Scientific Surveys.

Botanical Survey.—*The* Botanical Survey Department *of the Government* of India is under the *control* of a Director, who is assisted by three other officers. They are engaged in the examination and identification *of* plants and the study of floras. The *Director* is also in charge of the cinchona plantations in Burma.

In connection with the *general* question of post-war *industrial* policy, the Government *of* India decided in 1916 that every effort *should* be made to extend the area under cinchona in India, and deputed Colonel A. T. Gage, late Director of Botanical Survey of India, to explore land suitable *for* cinchona cultivation. As a result of his recommendations made in 1918 large areas in the Tavoy District of Burma were reserved for cinchona cultivation, and the first plantations were started there in 1920. A programme was adopted for planting 500 acres annually which would produce 90,000 lbs. per annum from 1928 onwards. *Owing* unfortunately to excessive rainfall in 1921-22 this plantation was entirely washed away, and the Tavoy scheme had to be abandoned. A fresh area was selected, however, in the Mergui *District* of Burma, and plantations were started there in 1922. The cultivation of cinchona here is still in the experimental stage.

At the instance of the Retrenchment Committee the area to be planted during the first *four* years has been limited to 250 acres *per* annum, The Governments of *Bengal* and Madras are also at the *instance of the* Government of India *extending their* cinchona plantations, and it [illegible] that Bengal should continue its [illegible] every year with [illegible] the Government [illegible]

The actual demand for the drug in India is difficult to estimate. Eight million cases of malaria fever go to the hospitals and dispensaries every year. If each of these is treated with 110 grains of quinine, which may be taken as the minimum for the cure of a paroxism, the demand for hospital and dispensary treatment alone would be 125,000 pounds a year. Patients do not get as much of the drug as they ought, because the cost of quinine is *prohibitive.* It is estimated that there are 150,000,000 sufferers from malaria *who do not* attend the hospitals. [illegible] is therefore somewhere [illegible] and 1,500,000 pounds. [illegible] *rnment, in 1003,* made quinine a State *industry and* cheapened its retail *price consumption* in that country enor*mously increased* and malaria mortality was reduced from 15,000 to 8,000 a year. The Public Health Commissioner *with the* Government of India says in a *recent* report that "it may be said that there is no question of the *effective* treatment of malaria in India *until* consumption of quinine approximates *500,000* pounds."

***Geological* Survey.**—The ultimate aim of *the Geological* Survey of India is the *preparation of a* geological map of India *upon the accuracy* of which the solution *of most geological* problems ultimately *depends.* Maps accompany the *reports on the* various areas in the *publications of the Department* and a large *amount of* information is made available to *the* public. Such maps represent pioneer work which enables [illegible] to cut short [illegible] and to start [illegible] left off. *Dur*[illegible] gical map and [illegible] mineral deposits of *importance* are frequently discovered. *Such discoveries* are published without delay and every endeavour is made to induce private firms to take up the exploitation of the mineral discovered. Collections of minerals, rocks and fossils *are* accumulated and exhibited in the *public galleries* of the Indian Museum, *situated* in the capital of Bengal. Some *of* the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Mountain chain. These mountains are a comparatively low range running parallel with the Himalayas *for* a great distance and at a short distance from them. They are in fact a huge bank of detritus washed down during the ages from the Himalayas. They *are* believed to have covered up *in the course of* their formation such a *quantity of* palæolithic remains as exists nowhere else in the world. The discoveries *of* skeletons and fossils hitherto made have been the result of washaways *after heavy* rains or of other *accidental circumstances* and there exists *no organisation* or systematised method for *either* prosecuting discovery or collecting what chance brings to light. The *Geological* Survey also undertakes the examination and identification, without fee, of any minerals, rocks and fossils sent in by private observers. The publications of the Survey include the Memoirs, Records and Paleontologia Indica.

Zoological Survey.—A scheme for the *formation* of a Zoological Survey on the basis of the Zoological and Anthropological Section of the Indian Museum, Calcutta, came into force in July, 1916. The proposals as sanctioned by the Secretary of State mainly are as follows:—"The headquarters of the Survey will be the Indian Museum. The *scheme* regarding the Zoological *Survey entails* the breaking up of the *organisation now* known as the Zoological and *Anthropological* Section of the Indian *Museum* into two parts, one of which will become a Government department *under the* title of the Zoological *Survey of* India, and will be primarily *concerned* with zoological investigation and exercise such advisory functions as *may be* assigned to it by Government, while the other part will remain as the *office of the* Trustees of

h Indian Mus m nd w b organ d t p es n nt n s a d d n t ngb ws of h Mu m I w b h duty o t Zoological Survey to act as guardian of the standard zoological collection of the Indian Empire, and as such to give every assistance in their power both to officials and to others, in the identification of zoological specimens submitted to them, arranging, if requested to do so, to send collections to specialists abroad for identification in cases in which no specialist is available in India". The Zoological Survey is also responsible for the Anthropological collections in the Indian Museum and in 1927 the additional appointment on the Staff of an anthropologist was created. The Director of the Survey was Dr Anandale until April, 1924, when he died—within a month of receiving the honour of Fellowship of the Royal Society Dr. Baini Prasad was appointed Acting Director in his place and continued in that capacity until July, 1925, when Lt Col. R. B. Sewell, I M S., M.A., F.A.S.B., I L S. F.Z.S., was made Director.

Mammal Survey.—The Survey was instituted in the year 1912 with the object of making as complete a study as possible of the occurrence and distribution of Mammals in India, Burma and Ceylon, and with the further object of supplementing the collection of Indian Mammals at the Bombay Natural History Society's Museum and at the British Museum as well as at the Natural History Museums in India, the primary object of the Survey being the furtherance of our knowledge of Indian Mammalian Fauna. Up to 1891 Naturalists in India had to rely for information on Dr. Jerdon's "Mammals of India" published in 1874. In 1884 R A. Sterndale published his Natural History of Indian Mammals a purely popular work which did not add much to Jerdon's book. In 1881 a memorial prepared by Dr. Slater, Hon. Secretary to the Zoological Society and signed by Darwin, Hooker, Huxley, and other well known scientists, was presented to the Secretary of State for India. The memorial recommended that a series of Volumes dealing with the Fauna of India should be prepared and Dr. Blanford should be appointed its Editor. The memorial resulted in the publication in 1888-1890 of the Volume on Mammals in the "Fauna of British India" Series and since 1891 this volume has been the standard work on *Indian Mammals*. Blanford's book was however based on the information then available and the shortcomings of the book have been revealed in the light of more recent research. Further knowledge in regard to distribution and classification and the discoveries of new species have rendered Blanford practically obsolete.

To remedy this defect, at the instigation of the authorities of the British Museum, the Bombay Natural History Society decided to institute what is now known as the Mammal Survey, Mr W. S. Millard, then Hon. Secretary of that Society, issued in an appeal to its members to enable the Society to engage the services of trained European collectors so as to make a systematic collection of the mammals of India, Burma and Ceylon. The response to the appeal resulted in over a lakh of rupees being raised between 1911 and 1920, partly by subscriptions from the Society's members, contributions from Indian Princes and grants from the Indian G h Govern m Burm C n S a es d h P n G nm Sub p on w e also d a L arn d S nd n u n Eng nd and America. By the outbreak of the war the Survey had been carried on over large areas of the country, the districts covered being—In Western India a portion of Sind, the whole of Gujarat, Kutch and Kathiawar; the Southern Maharatta country and Kanara in Southern India; in Coorg and Mysore; in the centre large tracts of the Central Provinces and some districts of Bengal and Behar; in Northern India the Society's collectors had worked over Kumaun, Darjeeling and Sikkim and the Bhutan Duars. In Burma, collections were made along the Chindwin river, in Central Burma and in the Shan States, Pegu and a portion of Tenasserim. The whole of Ceylon was also systematically surveyed.

The material, which up to the outbreak of War comprised some 17,000 specimens, was forwarded to the British Museum where the collections were scientifically worked out by the late Mr. R. C. Wroughton, formerly Inspector General of Forests, Mr. Oldfield Thomas, F.R.S. Curator of Mammals at the British Museum, Mr. Martin C. Hinton and others. The results of their researches were published in a series of scientific papers in the journal of the Bombay Natural History Society. The enormous mass of material then collected resulted in the discovery of large numbers of new forms and species and by increasing our knowledge of the distribution of Indian Mammalia has enabled the revision of Blanford's Mammalia to be undertaken and early in 1921 the Secretary of State for India commissioned Mr. R. C. Wroughton, since deceased, and Mr. M. C. Hinton to undertake the work.

When demobilization rendered it possible the work of the Survey which had been in abeyance during the war was resumed and a collector, Mr. C. Primrose, was sent to Assam and [illegible]

working inland but owing to the impracticability of continuing his work in Burma during the monsoon, he was transferred to Gwalior where H. H. the Maharaja kindly accorded permission to work in his territories.

After working a portion of the Eastern Ghats the next move was to the Kangra District in the North-West Himalayas and then on to the Punjab Salt Range Two other collectors worked in Southern India. Permission was once more obtained from the Nepal Government for a collector to resume the Survey work in that country The work in Nepal was brought to a successful close early this year with a representative collection of interesting mammals and birds

The Survey now has only one collector who is collecting in the foot hills of Himalayas and the Pindari Valley.

The Board of Scientific Advice.—This Board in accordance with a recommendation of the Inchcape Retrenchment Committee is in abeyance. It consisted of the heads of the Meteorological, Geological, Botanical, Forest Survey Agricultural and Civil Veterinary

D partm n t h w th su h o h s ent fi t o es as m gh [illegible] om [illegible]ime to time b[illegible]n [illegible]d by the Government of India to serve upon it. It was established in 1902 to co-ordinate official scentific inquiry, to ensure that research work is distributed to the best advantage, and to advise the Government of India in prosecuting practical research into those questions of economic or applied science on the solution of which the agricultural and industrial development of the country so largely depends. The programme of investigation of the various departments were annually submitted to the Board for discussion and arrangement, and an annual report was published on the work done.

The Secretary to the Government of India (Department of Education, Health and Lands, was *ex-officio* President of the Board, which included the Director-General of Observatories, the Director of the Zoological Survey, the Surveyor-General of India, the Director Imperial Institute of Veterinary Research, Muktesar, the Inspector-General of Forests, the Agricultural Adviser to the Government of India, the Director of the Geological Survey the Director-General, Indian Medical Service, the consulting Engineer to the Government of India, the Librarian, Imperial Library and the Director of the Botanical Survey of India who was Secretary to the Board of Scientific Advice.

The Universities Conference, representing all Indian Universities, which met in Simla in 192[illegible], recommended the revival of the Board, but the technical officers of the Government of India were of a different opinion and the Board continues in abeyance.

The Indian Research Fund.—The progress of this Fund and its Association like the Board of Scientific Advice, was seriously affected by the policy of retrenchment enforced in pursuance of the recommendations of the Inchcape Committee. Scientific research work is rapidly developing in India. In 1911 the sum of 5 lakhs (£33,000) out of the surplus opium revenue was set aside as an endowment for research into epidemic diseases in connection with the Central Research Institute at Kasauli. It was hoped that this sum might be largely augmented by private subscriptions. An Indian Research Fund Association was constituted, and a good deal of work was undertaken. Its objects were defined as "the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation mode of spread and prevention of communicable diseases." Fresh investigations into kala azar and cholera were inaugurated, and an officer was deputed at the expense of the Fund to study yellow fever in the regions where it is endemic, with a view to taking steps to prevent its introduction into India. A further grant of 6 lakhs (£40,000) was made to the Central Research Fund from the opium surplus of 1911-12. It was decided to devote to research and anti-malarial projects 5 lakhs (£33,000) a year from Imperial revenue commencing in 1913-14. A new periodical "The Indian Journal of Medical Research," was instituted in 1913 for publication four times annually, as the official organ of the Research Fund. The journal was designed to deal with every of s h d re y or md [illegible] on c ed w h m[illegible]d[illegible]ca[illegible] and [illegible]anitary s[illegible]ence, an[illegible] [illegible]orm a [illegible]eco d of what was being done in India for the advance of this work. In 1922 it was decided to devote the capital funds at the disposal of the Association to the erection of an Imperial Medical Research Institute and to the formation of a fund for its endowments. In the same year valuable results were achieved by Dr. Nishi Kanta De working in Calcutta on the chemistry of drugs used in treatment of leprosy and on the chemistry of the blood of lepers and resistent animals. The treatment of cancer, of influenza, of pneumonia, the histology and pathology of deficiency diseases and special problems concerning Indian calucidæ, kala azar, the action of quinine in malaria treatment were among the particular subjects of investigations specially dealt with by various research experts in 1922. Further substantial grants to the Research Fund have recently been made by Government.

Survey of India.—The work of the Survey of India Department falls under various heads, namely, the trigonometrical survey, topographical and forest surveys, special surveys and explorations, and map production. Cadastral surveys are now carried out by the Provincial Land Records and Settlement Departments

In 1904 attention was drawn to the defective state of the **topographical survey maps,** and a Committee was appointed to report on the subject. To overtake the arrears of revisional survey and to secure that the map of India should be brought up to date and revised at proper intervals, they recommended a considerable increase of establishment and an increased expenditure of Rs. 2 10,000 a year for the next 25 years. They also made recommendations for altering the size and improving the quality of the maps. After further inquiry the Government of India decided that a scale of 1 inch to the mile would ordinarily be sufficient, reserved forests and special areas being surveyed on the scale of 2 inches to the mile, and the ½-inch scale employed for waste and barren tracts. The work of the Department has in recent years greatly been hampered by the general need for retrenchment in expenditure. On the other hand, its organisation has lately been improved by the creation of a new North-West Frontier Circle, under a separate Director, this being the addition of a fifth Circle to the fo r already existing for all India and Burma. A recent valuable development has been the employment of aviators for survey work from the air in some parts of the country.

Indian Science Congress.—The Indian Science Congress was founded largely owing to the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief draw backs in the life of workers in science in India, (3) to promote public interest in [illegible] this end [illegible] Congress is held

at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress, which is progressive and vigorous meets in January each year, the proceedings last for six days. The Head of the Local Government is Patron of the Congress; the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research; when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests, in the evenings public lectures are delivered.

The Indian Research Fund Association.—This Association was formed in 1911. The objects of the Association are the prosecution and assistance of research, the propagation of knowledge, and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. The Association started a new periodical "The Indian Journal of Medical Research" in 1913 as the official organ of the Research Fund. This journal is published four times a year and deals with every branch of research directly or indirectly connected with medical and sanitary science and forms a record of what is being done in India for the advance of this work. Special Memoirs are also published from time to time by the Association. Certain sums have been reserved for the erection of an Imperial Medical Research Institute, but the project had to be abandoned during the post bellum economies. It is being reconsidered by an expert Committee during 1928. The activities of the Association, which were hampered by retrenchments recommended by the Inchcape Committee have been revived. During 1927-28, 64 enquiries are being conducted all over India at an estimated cost of Rs. 13,62,265. The enquiries deal with plague, cholera, malaria, the dysentery, nutritional, helminthic febrile and other diseases. A Central Malaria Organisation or Malaria Survey of India has been constituted. This Organisation will stimulate and work in collaboration with provincial organisations of a similar nature. Two malariologists and one entomologist have been appointed to work in it. Raja Sir Krishna Chandra, Gajapathi Narayana Deo Garu, Rajah of Parlakimedi, has given a donation of Rupees one lakh for the furtherance of research into problems of nutrition—the outlook is now brighter than it has been for some time.

The Survey of India.—The department is responsible for all topographical surveys; for explorations and the maintenance of geographical maps of the greater part of Southern Asia for geodetic work, including the main trigonometrical framework which extends in some cases far beyond the frontiers of India, and control networks of precise levelling based on tidal observatories, tidal predictions and the publication of Tide Tables for nearly 40 ports between Suez and Singapore, the Magnetic Survey, astronomical observatories with seismographic and meteorological records at Dehra Dun and geodetic investigations of an international character, in regard to which India enjoys a unique position between the greatest highlands of the world and a deep ocean extending to the Antarctic. Indian geodesy has thus disclosed by far the largest known anomalies of gravitational attraction in the earth's crust, which have led to some of the most important developments of modern geodetic research.

While expending on topographical and geodetic work all funds allotted by Imperial Revenues, [illegible] developing the policy [illegible] various ways on pa[illegible]. These miscellaneous operations include, all forest and Cantonment surveys and work for Boundary Commissions; many riverain, irrigation, railway and city surveys, and surveys of tea gardens mining areas, &c., with a great deal of control levelling for them, miscellaneous administrative assistance and officers are given to the revenue surveys of various Provinces and States. The Printing offices do much work for other Government departments, such as printing special maps, illustrations for Archeological Reports, all diagrams for Patents, &c. The Mathematical Instruments Office gives valuable aid to all Government departments by ensuring a high standard of instrumental equipment especially in connection with optical work, and by the manufacture and repair of high-class instruments, which would otherwise have to be imported from abroad.

The department is also responsible for all survey operations required by the Army, and has been rapidly developing measures to meet the greatly increased complexity of modern military requirements, especially in connection with air survey. The development of air surveys for various civil purposes is also receiving all possible encouragement and assistance, while the latest methods of stereo-photography are being studied experimentally.

Administration is by the Surveyor General under the Education, Health and Lands Department of the Government of India. Headquarter offices are at Calcutta under the Assistant Surveyor General, and there are seven Directors one for each of the five Survey Circles into which the country is divided, one for the Geodetic Branch at Dehra Dun, and one for the Map Publication and other technical offices at Calcutta.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs who works in subordination to the Government of India in the Department of Industries and Labour. The superior staff of the Direction, in addition to the Director-General himself consists on the postal side of two Deputy Directors General (who are officers of the rank of Postmaster-General), and six Assistant Directors General (whose status is similar to that of Deputy Postmasters-General).

For postal purposes, the Indian Empire is divided into nine circles as shown below, each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Deputy Postmaster-General '— Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, with the exception of those connected with the conveyance of mails by railways and inland steamers which are entrusted to three officers bearing the designation of Deputy Postmaster-General, Railway Mail Service. All the Postmasters-General are provided with Personal Assistants, while those in charge of the largest circles are also assisted by Deputy Postmasters-General. The nine Postal Circles and the jurisdictions of the three Deputy Postmasters-General, Railway Mail Service, are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors

Generally there is a head post office at the head-quarters of each revenue district and other post offices in the same district are usually subordinate to the head Office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmaster-General The Presidency Postmasters, indeed, have one or more Superintendents subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required one or more Assistant Postmasters are employed The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents such as school-masters, shopkeepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The **Inland Tariff** (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows :—

—	When the postage is prepaid.	When the postage is wholly unpaid.	When the postag is insufficiently prepaid.
Letters.	Anna.		
Not exceeding two and a half tolas ..	1	Double the prepaid rate (chargeable on delivery).	Double the deficiency (chargeable on delivery).
Every additional two and a half tolas or part of that weight .. — ..	1		
Book and pattern packets.			
Every 5 tolas or part of that weight ..	½		

Pos ards

S n e	½ anna
R p y	1

Th postage on ca ds of p . te manufacture must be prepaid in full.)

Parcels (prepayment compulsory).

(a) Parcels not exceeding 440 tolas in weight:—

	Rs. a.
Not exceeding 20 tolas	0 2
Exceeding 20 tolas but not exceeding 40 tolas	0 3
For every additional 40 *tolas* or part of that *weight*	3 annas.

(b) Parcels exceeding 440 *tolas* in weight :—
Exceeding 440 tolas but not exceeding 480 *tolas* .. .. Rs. 3 0
4 annas for every additional 40 tolas or fraction thereof up to 800 *tolas*.

Registration is compulsory in the case of parcels weighing over 440 tolas.

These rates are not *applicable to parcels* for Portuguese India.

In the *case of parcels* for Ceylon a registration fee of 2 annas is chargeable on each parcel in addition to the rates shown above.

Registration fee.	Rs. a.
For each letter, postcard, book or pattern packet, or parcel *to be registered*	0 2

Ordinary Money Order fees.

On any sum not exceeding Rs. 10 ..	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 up to Rs. 600	0 4

for each complete sum of Rs. 25, and 4 annas for the *remainder*; provided that, if the *remainder* does not exceed Rs. 10, the charge for it shall be only 2 annas.

Telegraphic money order fees.—The same as the fees for ordinary money orders *plus* a telegraph charge calculated at the rates for in and telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message.

In the case of Ceylon the telegraph charge is calculated at the rates shown below :—

Express—Rs. 2 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the *same as* the fees for ordinary money orders.

Insurance fees.—For every Rs. 100 of insured value 2 annas.

As regards Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Ceylon or to Portuguese India except in res- pe t of nsurance fees for par ls and pa cel postage s as fo lows :—

Letters.

To *Great* Britain and Northern Ireland other *British Possessions* and Egypt, including the Sudan.	2 annas *for the* first ounce and 1½ annas for each additional ounce or part of that weight.
To other countries, colonies or places.	3 annas for the first ounce and 1½ annas for every additional ounce or part of that weight.

Postcards, Single	1½ annas
" Reply	3 annas

Printed Papers.—½ anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 12 ounces in weight .. 3 *annas*

For every additional 2 ounces or part of that weight .. .. ½ anna

Samples.—1 anna for first 4 ounces and ½ anna per 2 ounces thereafter.

Parcels.

(i) Parcels not exceeding 20 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows :—

For a parcel—	*Via* Gibraltar. Rs. a. p.
Not over 3 lbs.	1 8 0
Over 3 lbs., but not over 7 lbs. ..	2 12 0
" 7 " " 11 " ..	3 15 0
" 11 " " 20 " ..	6 6 0

These parcels are delivered by the post office and the postage paid carries them to destination.

(ii)—Parcels which exceed 11 lbs. but which do not exceed 50 lbs. (the maximum allowed) in weight are forwarded from *India* through the medium of the P. & O.S.N. Co., and are delivered at destination under arrangements made by that *Company*. The postage *charge* applicable to such parcels is twelve annas for *each* pound, or fraction of a pound. The parcels are delivered free *of charge within a radius of one mile from the Company's Head Office in London*; if addressed to any place beyond that radius, carrier's charges are levied from the addressees on delivery. Parcels thus forwarded through the P. & O. S. N. Co. cannot be insured during transit *beyond* India, but must, if they contain coin, etc., be insured *during transit in India*. No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value-payable system.

Limits of Weight.

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers.—To Great Britain and Northern Ireland, and the Irish Free State, British Australasian Colonies, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—No limit.

To all other destinations—4 lbs. 6 oz.

Samples.—To Great Britain and Northern Ireland, and the Irish Free State, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—200 tolas.

To all other destinations—1 lb. 2 oz.

Parcels.—11 lbs.

Limits of Size.

Letters.—1½ feet length by 1½ feet in width or depth. If in form or roll, 2½ feet in length and 4 inches in diameter.

Printed Papers and Business Papers.—To Ceylon—2 feet in length by 1 foot in width or depth.

To all other destinations—1½ feet in length by 1½ feet in width or depth.

If in form of roll, dimensions in all cases are 30 inches in length and 4 inches in diameter.

Samples.—To Great Britain and Northern Ireland, and the Irish Free State, Ceylon, Hong-kong, the Straits Settlements, the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth.

To all other destination—1½ feet in length by 8 inches in width and 4 inches in depth.

If in form of roll, dimensions in all cases are 1½ feet in length and 6 inches in diameter.

Money Orders.—To countries on which money orders have to be drawn in rupee currency, the rates of commission are the same as in the case of inland money orders.

To countries on which money orders have to be drawn in sterling, the rates are as follows :—

	Rs.	a.
On any sum not exceeding £1 ..	0	5
" " exceeding £1 but not exceeding £2	0	5
" " " £2 " " £3	0	8
On any sum exceeding £3 but not exceeding £4	0	10
" " " £4 " " £5	0	12
" " " £5	0	12

for each complete sum of £5 and 12 annas for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 5 annas; if it does not exceed £2, the charge for it shall be 5 annas; if it does not exceed £3, the charge for it shall be 8 annas; and if it does not exceed £4, the charge for it shall be 10 annas.

Insurance fees (for registered letters and parcels only)

For insurance of letters and parcels to Mauritius, Iraq and British Somaliland and of parcels to Portuguese India, the Seychelles and Zanzibar—

	Annas
Where the value insured does not exceed Rs. 200	5
For every additional Rs. 200 or fraction thereof	5

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries other than those mentioned above and for insurance of letters to the Seychelles and Zanzibar.—

	Annas
Where the value insured does not exceed £12	5
For every additional £12 or fraction thereof	5

Acknowledgment fee.—3 annas for each registered article.

Magnitude of business in Post Office.—At the close of 1926-27 there were 107,721 postal officials, 23,737 post offices, and 161,259 miles of mail lines. During the year, 1,293 million articles, including 51 million registered articles were posted; stamps worth Rs. 60 millions were sold for postal purposes; over 37 million money orders of the total value of Rs. 897 millions were issued, a sum of Rs. 273 millions was collected from tradesmen and others on V. P. articles; over 5·7 million insured articles valued at 1,632 millions of rupees were handled. Customs duty, aggregating over 6 million rupees was realised on parcels and letters from abroad, pensions amounting to Rs. 15·6 millions were paid to Indian Military pensioners and 13,490 lbs. of quinine were sold to the public. On the 31st March 1927, there were 2,318,142 Savings Bank accounts with a total balance of Rs. 295 millions and 53,548 Postal Life Insurance policies with an aggregate assurance of Rs. 101 millions

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the

Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and [illegible] being controlled by a [illegible] charge of the two Circ[illegible] officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering side of a Chief Engineer, Telegraphs, with two Dy. Chief Engineers. For traffic work there is a Deputy Director-General, with an Assistant and an Assistant Director-General. On the 27th March 1920 a Controller of Telegraph Traffic was appointed to assist the Deputy Director-General in the inspection of offices and in controlling telegraph traffic. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India is divided up into five Circles, each in charge of a Director. For Burma special arrangements were considered necessary and the engineering work is in charge of the Postmaster-General who is a Telegraph officer specially selected for the purpose. These six Circles are divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circle was formed with its headquarters at Karachi. This circle is in charge of a Deputy Postmaster-General. On the 31st March 1924 there were 7 Circles and 20 Divisions.

The telegraph traffic work is under the control of the Postmasters-General, each of whom is assisted by a Deputy Postmaster-General and a suitable staff of attached officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Ceylon are classed as Inland telegrams. The tariff for inland telegrams is as follows:—

	For delivery in India. *Private and State.*		For delivery in Ceylon. *Private and State.*	
	Express. Rs. a.	Ordinary. Rs. a.	Express. Rs. a.	Ordinary. Rs. a.
Minimum charge,	1 8	0 12	2 0	1 0
Each additional word over 12..	0 2	0 1	0 3	0 2

The address is charged for.

Additional charges.

Minimum for reply-paid telegram	Minimum charge for an ordinary telegram.
Notification of delivery	Minimum charge for an ordinary telegram.
Multiple telegrams, each 100 words or less	4 annas.
Collation	One half of the charge for an ordinary telegram of same length.

		Rs.
For acceptance of an Express telegram during the hours when an office is closed.	If both the offices of origin and destination are closed ..	2
	If only one of th offices is closed.	1
	If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office	1
Signalling by flag or semaphore to or from ships—per telegram	The usual inland charge *plus* a fixed fee of 8 ans	
Boat hire	Amount actually necessary.	
Copies of telegrams; each 100 words or less	4 annas.	

	For delivery in India. *Press.*		For delivery in Ceylon *Press*
	Express. Rs. a.	Ordinary. Rs. a.	Express Rs a
Minimum charge ..	1 0	0 8	1 0
Each additional 6 words over 48 in respect of India, each additional four words over 32 in respect of Ceylon..	0 2	0 1	0 2

The address is free.

Foreign Tariff—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for private and state telegrams to countries in Europe are as follows:—

	Urgent Rs. a.	Ordinary. Rs. a.	Deferred. Rs. a.	State (British Govt.) Rs. a
All countries in Europe (except France, Russia and Turkey) *via* Eastern	3 0	1 0	0 8	0 8
Do. *via* Indo ..	3 0	1 0	0 8	—
Great Britain and Northern Ireland *via* I.R.T... ..	—	0 12	0 6	0 6
Most other countries in Europe *via* I.R.T.	—	1 0	0 8	0 8

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India or Burma an[illegible] stations at Bombay, [illegible] Port Blair or Rangoo[illegible] per word in nearly all cases.

I g O ud o B d T L f m n m p D il

... from the coast stations mentioned in paragraph 1 above:—

	Total charge per word.
	Rs. a.
(1) *All Government or Private* Radio-telegrams, excepting those mentioned in (2) to (5) below ..	0 10
(2) British, Indian or Colonial Government Radio-telegrams to His *Britannic* Majesty's Ships of War or Royal Indian Marine Ships	0 6
(3) Private Radio-telegrams to His Britannic Majesty's Ships of War ..	0 6

(4) [illegible]

(*a*) *For ten words or less*, six annas per word, plus a fixed charge of Rs. 2-8-0.

(*b*) *For more than ten words*, ten annas per word.

(5) Radio-telegrams to Roumanian, Spanish and Swedish ships —

(*a*) *For ten words or less*, six annas per word, *plus* a fixed charge of Rs. 1-14-0.

(*b*) *For more than ten words*, nine annas per word.

The sender of a radio-telegram may prepay a reply He must insert before the address, the instruction "*R. P.*" followed by mention in Rupees and annas of the amount prepaid *e g.*, R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted on any day of the week, excluding Sundays and telegraph holidays, and are ordinarily delivered to the addressee after forty-eight hours. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is a quarter of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 20 words at such reduced rate

... accepted during the closed hours of an office

On Indian lines Daily Letter-Telegrams are *transmitted after Deferred Foreign telegrams.*

In the Daily Letter-Telegram service the special instructions relating to prepayment of replies are admitted other special services are inadmissible in DLT Telegrams.

Packed messages, *i.e.*, messages intended to be communicated to different persons, are not accepted in the text of Daily Letter-Telegrams

Daily Letter-Telegrams to Great Britain and Ireland *via* Eastern or Indo or I.R.T. are accepted at one-fourth the rate for ordinary telegrams, subject to a minimum of 20 words per telegram including the indication DLT. The charge for a week-end telegram to Great Britain and Northern Ireland is 3 annas a word *via* Eastern or Indo and 2½ annas a word *via* I.R.T. subject to a minimum of 20 words per telegram including the *indication* IWT.

TELEGRAPHS.

ABBREVIATED LIST OF RATES * "*via* I. R. T."

COMPILED FROM FIGURES SUPPLIED BY THE DIRECTOR-GENERAL OF POSTS AND TELEGRAPHS.

Week-end Telegrams (To Great Britain only), accepted on Saturday or any previous day for delivery on the following Monday—2½ annas per word.

Daily and Week-end Letter Telegrams—Minimum charge for 20 words.

Ordinary rate telegrams may be written in Code.

Telegrams are accepted at all *Government* Telegraph Offices.

Usual rules apply regarding Registration, Reply Paid, etc.

Full lists published in *Post and Telegraph* Guide.

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 *miles of line* and 155,088 miles of wire and cable, as compared with 511,868 wire including cable and 93,126 line including cable miles, respectively, on the 31st March 1927. The numbers of departmental telegraph offices were 257 and 164 (including 53 Coast Radio offices, respectively) while the number of telegraph offices worked by the Post Office rose from 1,634 to 3,852.

The increase in the number of paid telegrams dealt with is shown by the following figures :—

		1897-98.	1926-27
Inland ..	Private ..	4,107,270	14,539 371
	State ..	860,382	1,068 003
	Press ..	35,910	453 092
Foreign ..	Private ..	735,670	2,891 077
	State ..	9,896	30 306
	Press ..	5,278	39,293
		5,754,415	19,022,602

The outturn of the workshops during 1926 27 represented a total value of Rs. 20,30,853 At the end of the year the total outlay of the Indian P. & T. Department to end of the year staff numbered 14,661. The total capital amounted to Rs. 12,14,34,780. The Net profit for the year was Rs. 10,24,962.

Wireless.—The total number of Departmental wireless stations open at the end of 1926-27 was twenty-four, *viz.*, Allahabad, Bombay Calcutta, Delhi, Diamond Island, Jutogh, Karachi Lahore, Madras (3 stations), Mhow, Nagpur Peshawar, Poona, Port Blair, Quetta, Rangoon (3 stations), Sandheads (two pilot-vessels), Secunderabad, and Victoria Point of which *only* Port Blair and Victoria Point booked telegrams direct from the public.

The new Duplex high-speed service between Rangoon and Madras continued to work satisfactorily, the Baudot system being employed generally for this circuit.

Telephones.—On the 31st March 1927 the number of telephone exchanges established by the Department was 271 with 15,041 straight line connections and 2,071 extension telephones. Of these exchanges, 112 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 18 with 28,384 connections.

Sanitation.

The history of the sanitary departments in India goes back for about fifty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated; the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 23rd, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India*, May 25th, 1914) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found

ai d h Indian Yea Bo k o 19 pag 4 5 g and ea h ed o s On o the han ..ne.ted by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a *subject directly responsi*ble to local control through Ministers. It is yet full early to attempt to indicate the effects of this change.

The Public Health Commissioner with the Government of India in a *general* review of health organisation in British India which he laid in January, 1928, before the Interchange *Study Tour organised* for *Medical Officers* of Health from the Far Eastern Countries by the *Health* Organisation of the *League* of Nations, concluded "that the State effort in regard to Health *Organisation* in British India is one of *no mean* importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary *for laying the* foundations of medical *education*, that it has tried to uphold the ethical standards of western *medicine and* that in whichever way it is regarded *it* is an effort of which no *Government need* be ashamed." He quoted the *remark* of the Government of India in their Resolution of 1914, that "in the land of the ox cart one must not expect *the pace of the* motor car."

The Public Health *Commissioner* in his Latest published *annual* report (for 1925) notes the introduction of the political element into *health* matters as a result of the Reforms *and* says that the improvements *being introduced* before the Reforms *are in some* provinces now in a fair way to *maturing* but that in other provinces "with less appreciation of the actual *needs* so far from adding to the *organisation* as they have found it have *shown a desire* to scrap even some of what *they originally* possessed" But, he says, "though the picture is neither bright *nor* the future rosy, it is *becoming increasingly* evident that a considerable section of the Indian community is *thinking* seriously on these public health problems, amid much futile and *destructive* criticisms of State and *municipal* efforts here and there valuable and suggestive h.. ..ce with which goes to prove my contention."

India's birth rate *in* 1925 was nearly twice that of *England* and Wales, her death rate was twice *that* of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was *nearly* 2½ times that of England *and* Wales and nearly 4½ times that of *New Zealand*. "The information *furnish*ed for the great group of infectious *diseases* of world import *i.e.*, plague, cholera, small-pox, yellow fever, typhus, *malaria*, and dysentery shows (says the *Public Health Report* already *cited*) that if we except typhus and *yellow fever* India is one of the world's *reservoirs* of infection for the others and the *main* reservoir of infection for *plague* and cholera." The significance *of these* facts must, adds the Commissioner, be obvious to all who think: "Briefly their implication is that India's *house*, from the public health point of view, is sadly out of order and that *this disorder* requires to be attended to. *It is not* for India to say that so far as she is concerned prevention is *impossible*. If we think of the effect *of sunlight on tubercle* ridden children, *of the effect of feeding* on rickets, scurvy *and beri-beri*; of the way in which *malaria* cholera, yellow fever, dengue, ankylostomiasis and filariasis can be *and have been* overcome we need have *no fear* in regard to India provided *the necessary* measures are put into *operation*."

The Public Health Commissioner *in an address* before the annual congress of *the Far Eastern* Association of *Tropical Medicine*, held in Calcutta in *December*, 1927 urged the importance of instituting a Central Ministry of *Health* which should be charged with the *functions* of co-ordinating the policies and activities of the departments concerned in the several provinces *and with* keeping them abreast of scientific progress. There is at *present* no Public Health Act for the whole *of India*, nor under existing administrative arrangements is one immediately *possible*, but the desirability of *the Central Ministry* of Health and of such an Act is likely to be urged in the course of the revision of the Constitutional Reforms *now in* progress.

The Public Health Commissioner in his annual review shows that the outstanding statistical data concerning health during the year 1925 are briefly as follows :—

(1) The birth rate fell down from 34 45 per mille in 1924 to 33 65 per mille in 1925 ,

(2) The death rate fell from 28.49 per mille in 1924 to 24 72 per mille in 1925;

(3) The infantile death rate fell from 189 in 1924 to 174 in 1925.

He shows that taking the year as a whole rainfall was within 25 per cent of the normal except in Orissa and the Madras Coast North where it was in moderate excess and in Baluchistan, Sind, Rajputana and Gujarat, where it was in large defect.

Birth ratios exceeded death ratios in all provinces except Coorg, where the death rate was in excess by 3.05. Central Provinces (1 11.94), Bihar and Orissa (11.9) Bor Punjab (10.09), Ajmer-Merwara (9 6 (9.3) were among the big birth incre throughout British India numbere as compared with 6,879,286 in the year a decrease of 911,368. Regist exceeded registered deaths by 2 15 1.438,117 in 1924, all provinces exce having contributed to this. The was 24.72 as against 28.49 in 1924 quennial mean of 27.74. The urbar was 29.65 against 31.65 and the ru 24.30 against 28.19 in 1924. In Delhi Bihar and Orissa the rural rates e urban ones ; in Coorg the urban rat the rural one by 26.37 in Burma by in the United Provinces by 11.54.

T n adm d t
... 6 000 d h
658 in 1924, 595.4 in 1923, 628.9 in 1922, 1,062.3 in 1921 and 580.5 in 1913. The appreciable diminution in disease during 1925 was mainly due to lessened malaria, which remains as before the principal cause of sickness in India. There were 185 deaths, or 2.89 per 1,000 of strength, compared with 4 20 per 1,000 in 1924, 3 75 in 1923, 4.72 in 1922, 6 95 in 1921 and 4.36 (average) in 1910-14. The figure for 1925 constitutes a record The number invalided was 997 or 17.38 of the total strength, compared with 15 per 1,000 in 1924, 15.51 in 1923 and 8.03 (average) for 1910-14. The increase in this figure was solely due to diseases of the ear In 1924 men invalided for diseases of the ear numbered 100 and in 1925 this figure rose to 164. Of all the invalids 253 had less than one year's service in the country and of these 137 suffered from diseases of the ear. The rng num n tan p and ti h so die w e app o mately the same as before the war.

An analysis of the different causes of sickness shows an enormous preponderance of disease due to bites of mosquitoes and sandflies and shows the importance of preventive measures directed against these pests. The large number of hospital admissions for "inflammation of areolar tissue" is also attributed in some measure to the same causes, on account of the irritation of the bites and subsequent scratching and infection The Northern Command as usual had the greatest incidence of malaria and Burma District of venereal disease. The figures for Waziristan are remarkably good and it is pointed out that most of the British troops there are concentrated at Razmak, a hill station. They are 44 per cent better than in 1914 an improvement attributed to better housing and an increase in the ration allowance.

Indian.—The outstanding feature of the statistics for 1925 in regard to the Indian Army is that the ratios per 1,000 for admissions, deaths and average constantly sick are in each case a record low figure in the annals of the Indian Army. The following table shows the main health statistics by years:—

Period.	Average strength.	Admissions.	Deaths.	Invaliding.	Average constantly sick.	Ratio per 1,000 of strength.				Average period of illness of each soldier calculated on average strength.	Average duration of each case of sickness.
						Admissions.	Deaths.	Invalids.	Average constantly sick.		
1910-14 (Average).	130,261	71,213	573	699	2,662	344 6	4.33	5.4	20.7	7.31	13.50
1915-19 (Average).	204,208	161,028	3,435	4,829	7,792	788.2	16 81	23.6	38.1	13.92	17.63
1920 ..	216,445	164,987	2,124	4,564	9,265	762 3	9.81	21.1	42 8	15.62	20.50
1921 ..	175,384	119,215	1,782	3,635	6,031	679.7	10.16	20.7	34.4	12.55	18.47
1922* .	147,840	77,468	1,014	2,659	3,639	524.0	6.86	18.0	24.6	8.98	17.15
1923* ..	143,234	66,847	856	2,328	2,955	466.7	5.98	16 3	20.63	7.53	16.13
1924* ..	134,742	57,014	772	1,731	2,432	423.1	5.73	12.8	18.05	6.61	15.61
1925* ..	136,473	48,691	547	1,712	2,053	356.8	4.01	12.5	15.04	5 49	15 39

*The figures for stations outside India, *i.e.*, Aden and Bushire have been included.

The admission rate (for 1925) is 356.8 per 1,000 and shows a decrease of 66 3 per 1,000 as compared with 1924. The ratio per 1,000 for deaths is 4.01 as compared with 5.73 and the ratio per 1,000 for average constantly sick 15.04 as compared with 18.05 in 1924

The ratio per 1,000 for invalids is 12.5 and is the lowest since 1914 However, it is still more than double the figure for the quinquennial period 1910-14. The hospital admission ratios for the chief diseases show a marked fall in the incidence of Malaria. The early and short monsoon did not favour the occurrence of a malaria epidemic. There is a welcome improvement in the incidence of small-pox and of venereal disease. A slight increase is shown in influenza, the entire group of fevers, sandfly fever and diarrhoea.

MORTALITY FROM WILD ANIMALS

The total number of persons killed by wild animals in British India during 1925 amounted to 1,962, as against 2,587 in the previous year. Tigers were responsible for 974 deaths, leopards for 181, wolves for 263, bears for 82, elephants for 78, and hyenas for 6. Deaths were highest from tigers in Madras, from leopards in the Central Provinces and Berar, from wolves in the United Provinces, from bears in Bihar and Orissa and from elephants in Assam. Of the 370 deaths from "other animals," 73 were assigned to wild pigs and 98 to crocodiles and alligators. The highest number of deaths from all wild animals occurred in Madras (452), Bihar and Orissa, the United Provinces and the Central Provinces and Berar coming next in order. The mortality from elephants showed a marked increase in provinces where these animals are found wild. There has been a noticeable decrease in deaths from all other animals except bears in almost all provinces.

Deaths from snake bite fell from 19,867 to 19,258. Decreases occurred in Madras, the United Provinces, the Punjab, Burma, Bihar and Orissa, the Central Provinces and Berar and Assam; but Bombay and Bengal have reported slight increases.

During the year 21,605 wild animals were reported to have been destroyed of which 1,609 were tigers, 4,660 leopards, 2,485 bears and 2,361 wolves. A sum of Rs. 1,55,667 was paid in rewards, against Rs. 1,69,765 in the previous year. The number of snakes destroyed in India proper decreased from 47,106, to 41,604 and the rewards paid for their destruction were Rs. 1,579 as against Rs. 1,405 in the previous year.

MEDICAL INSTITUTIONS.

There were 3,956 State-Public, Local Fund and Private-Aided Civil Hospitals and Dispensaries in India at the end of 1925 as compared with 3,669 in 1924 an increase of 287. The total number of patients treated was 41,155,578 (752,075 in-patients and 40,402,603 out-patients) as compared with 38,686,249 (694,783 in patients and 38,686,249 out-patients) in 1924. The increase was noticeable in all provinces except Assam and the United Provinces. The greatest reduction was in Cachar district of Assam, partly due to the levy of a fee of one anna per out-door patient on each new case.

The number of Mental Hospitals throughout British India was 23, compared with 22 in 1924 and their total population 10,992 against 9,712 in 1924. The criminal population of the mental hospitals numbered 584 in 1925 against 560 in 1924.

There were in 1925 eight Medical College in India and 23 Medical Schools. There is at Dehra Dun an X-Ray Institute wherein training is given in radio-diagnosis, radio—and electric-therapy and radiology, the number of students in 1925 being 62. There are officially maintained X-Ray Installations at Delhi and Simla.

LEPROSY IN INDIA.

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. The census figures of 1921 give the total as 102,513, as against 109,094 in 1911. But it is doubtful if this figure represents anything more than the more advanced cases and possibly a majority of this number are the begging and pauper lepers who are seen all over the country. Dr. E. Muir, M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, says that "we think that it would not be an over estimate to put down the number of lepers in India somewhere between a half and one million."

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England, with H. R. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925. His Excellency is its President and Sardar Saheb Balwant Singh Puri, Honorary Secretary of the Association.

A special research worker on a Salary of Rs. 1,200-75-1,500 has been appointed for five years who is working under Dr. E. Muir, M.D., F.R.C.S., in the School of Tropical Medicine and Hygiene, Calcutta, where doctors are trained in the special treatment of leprosy.

The whole of the first year of the Indian Council was occupied with preliminary organising work and very early, in its second year, 1926 it began to put its work into operation. The Central Committee is under the finally adopted scheme vested with the task of promoting research, preparing and publishing propaganda material and arranging for the training of doctors in the diagnosis and treatment of leprosy. Measures for the accommodation and treatment of leprous patients and other schemes of purely local interest are the concern of Provincial Committees working as agents of the Indian Council. One of the early decisions of the Council therefore related to the apportionment of the revenue of the Fund as between the Central and Provincial Governments. It was decided that the total revenue, less the income of contributions received from Ruling Princes, which according to their wishes, has been ear-marked for the promotion of research under the direction of the Central Committee, should so be allocated that the amount distributed to

Provincial Committees should not be less than 50 per cent. of the total

Two circulars were early in 1926 issued to the Provinces setting forth in detail the approved plan of action for the Central and Provincial Committees. In pursuance of the proposals made in it permanent local Committees to administer the funds to be allotted to them from the head quarters and to direct and control the anti leprosy campaign in their respective provinces were formed and by the close of the year all the Provinces has constituted branches In order to secure uniformity in certain broad principles relating to the anti-leprosy campaign to be undertaken by the Provincial Committees and with a view to its conformity with the latest scientific information about the nature of the disease, the Indian Council issued in the early part of 1926 a "Memorandum on the method of conducting the anti-leprosy campaign in India." This document sought to bring out the following main points which according to the latest scientific researches should be the bases upon which all efforts ultimately to eradicate leprosy must rest.—

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.

(2) Segregations is not the most appropriate method of dealing with lepers, for

(a) financially it would be impossible:

(b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Committees should, for the present at least be concentrated upon the establishment of dispensaries to serve the following objects:—

(a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable; and so

(b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generation, will become fewer.

The Provincial Committees have all placed the question of the training of doctors and the starting of treatment centres where facilities will be available for the proper diagnosis and treatment of the disease, in the forefront of their programmes and their resources have in many cases been supplemented by local Governments by the grant of substantial financial assistance

A general appeal for funds was made on the formation of the Indian Council and closed in January 1926. Realisations produced Rs. 20,00,000. This was invested and forms the capital of the Association, to which it yields an annual revenue of Rs. 1,21,000.

CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling infant mortality. It has been calculated that every year no fewer than 2 million Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres in most of the larger towns in India. The institution of an all India Baby Week, an undertaking to which Her Excellency the Countess of Reading has devoted great and successful enthusiasm has also given a stimulus to the work and promises to be an important perennial aid to its progress. In all the great centres of population work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infantile hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that and consistent widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children. The admirable work done year by year by the National Association for supplying Female Medical Aid to the Women of India is recognised by the Government of India, which subsidises this organisation with a grant of Rs. 3,70,000 a year for the maintenance of the Women's Medical Service of India

Centres of Activity.—The Child Welfare Directory gives the following list of places where the movement is already at work:

Bombay.—The centre of much active and enthusiastic welfare work; the Lady Willingdon Maternity Homes near the people's chawls being unique of their kind in India. The Bombay Infant Welfare Society founded by Lady Lloyd has already established 8 Infant Welfare Centres where prenatal, maternity and child welfare work is being carried on.

Poona.—The work carried out by the Seva Sadan Society of Poona deserves special mention in this connection. Child welfare centres have been established in several places throughout the Presidency and are in charge of Public

Health Nurses trained by the Seva Sadan Society. Certain of these Child Welfare centres are subsidized by the Bombay Branch of the Red Cross.

Surat.—The Henderson Ophthalmic Scheme for treating Ophthalmia Neonatorum and stemming "the enormous amount of preventible and curable blindness that is laying its shadow over the health, happiness and usefulness of this great portion of our Empire."

Bijapur.—Mr. Henderson, I.C.S., has now started the same beneficent work for blind babies as in Surat.

Delhi.—Work was started in 1914 by two lady health visitors brought out from England by the Government of India. Their salaries are now met by the Delhi Municipality, a substantial grant being paid towards them by Government; three infant welfare centres have been established and a comprehensive scheme for the training and supervision of indigenous *dais* is carried on. A training school for health visitors and midwife supervisors has been established in connection with this scheme and is financed by the Lady Chelmsford League. All particulars may be obtained from the Secretary Lady Reading Health School, Viceregal Estates, Simla (and Imperial Secretariat, Delhi).

Madras.—Under the Provincial Branch of the Lady Chelmsford League and of the Red Cross Society a number of Infant Welfare Centres have been opened in the City, also a school for training health visitors under Mrs Chinappi, M.B., the Medical Superintendent of the Co-operative Midwives Scheme, by means of which trained midwives are provided for the City and much antenatal, maternity and infant welfare work is carried on. There are also local centres of both the Red Cross and the Lady Chelmsford League in the Madras mofussil.

Punjab.—The Punjab Branch of the Lady Chelmsford League was founded in 1921 and has established an Infant Welfare Centre and a school for training health visitors in Lahore under two health visitors brought from England. Its object is to establish child welfare centres with a trained health visitor in charge in each district.

United Provinces.—Infant Welfare centres exist in the following places:—Agra, Allahabad, Bareilly, Cawnpore, Dehra Dun, Gonda, Ghazipur, Lucknow. Other places are also taking up the work, and decrease in Infant mortality is noted as a result of the work in many places.

Bengal.—Work as undertaken by the Corporation of *Calcutta*, and by the Indian Red Cross Society in that town. The latter body is now also financing a Health School for the training of workers. A centre at *Titagkur* financed by Thos Duff & Co., Ltd. cares for the infants of the operatives in the Jute Mills. A flourishing centre exists at *Dacca* where excellent work is being done.

Sind.—Karachi has two trained Health Visitors as well as 8 nurses, and there is a large amount of maternity work. Hyderabad is noted specially for its work among indigenous midwives.

Central Provinces.—In Nagpur city the work is being carried on by the Municipality very successfully. The Red Cross has also opened a centre in Civil Lines.

Rajputana.—Ajmer is the only centre at present.

N. W. F. P.—Dera Ismail Khan has a flourishing work, much appreciated by the people. Peshawar centre has had to be closed for want of a suitable worker.

Baluchistan.—A centre was established in Quetta in 1922, and has done steady work.

Central India.—Indore has a centre financed by the Red Cross Society.

Bangalore.—Has an enthusiastic Committee with two Health Centres.

Indian States.—The following have undertaken definite Child Welfare work, while trained midwives are employed in a number of others: Kolhapur, Baroda, Jaipur.

So far all the schemes have devoted their attention to combating the prejudices of the mothers in respect of new-born children. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, under-nourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizen.

INDIAN RED CROSS SOCIETY.

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilization for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely de-centralized, and are being carried on through twenty-two Provincial and State Branchesr under which there are numerous sub-branches.

The **objects** on which the funds of the Society may be spent are—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.
2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.
3. Child welfare.
4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.
5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.
6. Home Service Ambulance Work.
7. Provision of comforts and assistance to members of His Majesty's Forces, whether on the active list or demobilised.

The Society has five grades of subscribing Members, namely, Honorary Vice-Presidents Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150 and any thing between Re. 1 and Rs. 5 annually or consolidated payment of Rs. 50

Constitution.—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice-Presidents nominated by Provincial or State Branches 8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is the Hon'ble Sir Henry Moncrieff Smith, Kt C.I.E., I.C.S., and the Organising Secretary Colonel Bhola Nauth, C.I.E., I.M.S. (Retd.)

Finances.—The operations of the Joint War Committee were brought to a close in June 1926 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances in the end of December 1926 stood at a capital investment of the face value of Rs. 67,53,000-0-0. The income derived from the capital of the Society, (which is 3½ lakhs at present) after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund A sum of Rs. 2,70,000-0-0 was so distributed to the Provincial Branches under this arrangement during the year 1926.

St. JOHN AMBULANCE ASSOCIATION.
(Indian Council.)

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects :—

(*a*) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured ;

(*b*) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room ;

(*c*) The manufacture and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic ;

(*d*) The Organisation of Ambulance Corps, Invalid Transport Corps, and Nursing Corps ;

(*e*) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination.

An Indian Council of the Association was constituted in 1910. It has since issued 1,20,468 certificates of proficiency in First Aid, Home Nursing, Home Hygiene and Sanitation and 5,944 tokens such as Vouchers, Medallions Labels and Pendants for special proficiency in those subjects. The object of the Association is not to rival, but to aid, the medical man, and the subject matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

In 1926 the Indian Council spent Rs 47,235-5-7 in furthering its objects and closed the year with Govt. securities of the face value of Rs. 70,000. The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs. 1,000, Rs. 500 Rs. 100, Rs. 5, and Rs. 2.

Their Excellencies Lord and Lady Irwin and Field-Marshal Sir William Birdwood as President, Lady President and Chairman respectively, with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon'ble Sir Henry Moncrieff Smith, Kt., C.I.E., I.C.S., is the Chairman, and Colonel Bhola Nauth, C.I.E., I.M.S. (Retd.), the General Secretary

LUNACY AND ASYLUMS IN INDIA

on for mentally afflicted dia is, like that for those y inadequate. In the dition of affairs as regards itutions for the care and ane is still worse as no t all so that those whose render their freedom a or the most part confined

Census Reports of 1921 ion of 318,942,480 (India and Burma), there are 72,907 person making a proportion of insane to sane every 10,000.

In the United Kingdom the propo insane to sane is roughly 40 per 10,00 n New Zealand it is as much as 45 pe In reviewing these figures it must be mind that those of the United Kingd New Zealand include the "feeble-m an item that is not included in the fig British India.

The admin st at on of Asylums s unde he d ct nt o o h P ovinc a Adm str
M d a O h ers In the case of the so-called *Central " Asylums*, that is to say, the Asylums at Madras, North Yeravda (Bombay Presidency), Lahore (Punjab), Agra (United Provinces of Agra and Oudh), *Berhampore (Bengal)*, and Rangoon (*Burma*) as *well as the* Asylum at *Ranchi the charge* of the institution is in the hands of a wholetime medical officer who is termed the "Superintendent". He is *usually*, but by no means always, a trained alienist. The *remaining Asylums* are in the charge of the Civil Surgeon of the locality in which they happen to be situated. Not one of the existing Asylums in British India can be *said to be* up-to-date as regards construction, organisation, staffing or *equipment*. In every instance, even including the new Asylum *for* Burma which is now under *construction in* Rangoon, the custodial *aspect of the* Institution has received the greatest amount of consideration with the result that only a very little attention has been paid to all that goes towards the remedial requirements *of* the institution. It will *probably* take some years yet to obtain in India proper recognition of the fact that an Asylum for persons suffering *f om m ntal d seas s* shou d be
n e ery sense of the term her raison d'etre is to treat and to c every other *consideration* must be dary to this fundamental conc *in* almost every country in the makes any pretension to be rega lised, the term " Asylum " has n *lished for all institutions* dedic *care and* treatment of the in *to* the lack of interest in Psych that this term generally *connote* and America, the nomenclature *followed in* the classification of m renders all official returns that to deal with the types of insan in the various Asylums in India c worthless. *Even* were a less ob *fication of* the varieties of ment troduced it would not be possible ing absence of properly *trained* render information *that* would be *statistical value* from a psychiatric

The following table shews the cl the types of insanity *recorded* i published by *every Province* in t *year 1924-25*.

The principal types of insanity treated during the year 1924-25 in the Lunatic As Provinces of—

—	Bengal.	Assam.	Bihar & Orissa.	United Provinces	Bombay.	Madras.	Punjab.
diocy	24	6	13	128	100	61	125
Mania	304	217	144	483	650	341	195
Melancholia	139	183	29	165	301	180	79
pileptic Insanity	83	21	27	100	93	69	77
Other forms of Insanity ..	333	74	126	557	281	487	231
Dementia	532	2	70	167	437	278	486

It will be seen from the *foregoing that* the rgest number of cases *in the* Asylums are hewn as "*Mania*" and "Melancholia." These rms "Mania" and "Melancholia" are nowa-ays *regarded* as obsolete. For purposes of mparison of the terms *that* are nowadays nployed to distinguish *psychopathic* states ith those *that are still* permitted to hold good India the following extract has been made om a recent report published by the Union South Africa :—

Infection Psychoses.
Exhaustion Psychoses.
Intoxication Psychoses.
Thywigenons Psychoses.
Dementia Præcox.
Dementia Paralytica.
Organic Dementias.
Involution Psychoses.
Manic-depressive Psychoses.
Paranoia.
Epileptic Psychoses.
Psychogenic Neurosis.
Constitutional Psychopathic State
Psychopathic Personalities.
Defective Mental Development.

As regards the **incidence of insanity** among the various races of *India* as well as the incidence of insanity *in relation to occupation* no really *reliable* information is obtainable in view of the comparative paucity of cases in proportion to the general population that come under observation. On the other the incidence by age is shown fairly well in the Census Report of 1911 to be as follows:

INDIA

AGE.	Insane.		Distribution of the insane by age per 10,000 of each sex.	
	Male.	Female.	Male.	Female.
YEARS				
0– 5	651	434	102	139

Total for all India	54,151	34,154	....	....

A further result of the general apathy, both official and non-official, towards matters pertaining to psychiatry, the subject of 'feeble-mindedness' has not yet come to be recognised as one that has any practical bearing on the welfare of the state as a whole with the result that there is no official institution for the care and education of feeble-minded children.

As regards the relation of insanity to crime, and more especially as regards the confinement of criminal insanes in jails, the report of the recent Commission of Enquiry into the subject of Indian Jails (published in 1920) contains some valuable suggestions. As things are the ideas both as regards the theory and the practice of dealing with insanity and crime in India, embodied in the existing legislation can only be described as archaic.

(See also "*Insanity in India*" by Colonel G. F. W. Ewens, I.M.S., and "Lunacy in India" by Major A. W. Overbeck-Wright, M.D., D.P.H., I.M.S.)

The Women's Medical Service for India

Th s S   ce s n uded n he Na ona A tl n f. s_pp y ng m d a a d b_ women to the women of India, generally known as the Countess of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £..,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (*a*) in India by a medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service; (*b*) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (*a*) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (*b*) Must be between the ages of twenty-four and thirty at entry. (*c*) She must be a first-class medical woman, *i.e*, she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act; but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (*d*) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed. The services of officers may be lent to Local or Municipal bodies, or to special institutions, which may be responsible for whole or part of the pay

Pay.—The rates of pay are as follows:—

1st	to	3rd	year	Rs.	450	per month.
4th	to	6th	,,	,,	500	,,
7th	to	9th	year	Rs	550	per month
10th	to	...h	,,	,,	600	,,
13th	to	15th	,,	,,	650	,,
16th	to	18th	,,	,,	700	,,
19th	to	21st	,,	,,	750	,,
22nd	to	24th	,,	,,	800	,,
25th	and after		,,	,,	850	,,

also an overseas allowance of Rs. 100 per month to those below 12 years' service and Rs. 150 per month to those of 12 years' service and over. But no member can be confirmed in the 500-rupee grade unless she has passed an examination in such vernacular as the Provincial Committee shall prescribe. In addition furnished quarters are provided free of rent or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it.

Officers of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to determine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of fifty-five. An officer whose appointment is not confirmed or who is dismissed, is granted an allowance sufficient to pay her passage to England.

Leave Rules.—(*a*) Casual Leave, which is occasional leave on full pay for a few days and is not supposed to interrupt duty. (*b*) Leave on average pay is granted up to 2-11 of an officer's period on duty, according to Fundamental Rules. More than eight months' leave on average pay is not granted at one time. (*c*) Study leave may also be granted up to twelve months during the whole service. An allowance of 12 sh. per day is granted in addition to ½ average pay during study leave. (*d*) Extraordinary leave at any time at the discretion of the Executive Committee (*e*) Leave not due may be granted subject to the following conditions —(*i*) on medical certificate, without limit of amount; and (*ii*) otherwise than on medical certificate, for not more than three months at any one time and six months in all reckoned in terms of leave on average pay. (*f*) The maximum period of continuous absence from duty on leave granted otherwise than on medical certificate is 18 months. (*g*) When an officer returns from leave which was not due and which was debited against her leave account, no leave will become due to her until the expiration of a fresh period spent on duty, sufficient to earn a credit of leave equal to the period of leave which she took before it was due. There are no allowances during extraordinary leave A doctor appointed in England receives a sum of £100 to cover her passage and incidental expenses. There are also allowances to cover the cost of journeys by rail and road.

There is also a Provident Fund, each member contributing monthly thereto ten per cent of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent. per annum, "or at such rate as the Council can invest without risk to the funds of the Associati

[illegible] resigns (except on account of ill-health) before completing five years' service, or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

FREE PASSAGES.—Officers of the Women's Medical Service are granted free return passages corresponding to those granted under the Lee Concessions to officers of all-India services. The maximum number of return passages granted during an officer's entire term of service must not exceed four, the first falling due after 4 years service.

Lady Hardinge Medical College and Hospital—The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director-General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All-India Association of Medical Women and the Surgeon to H. E. the Viceroy. The Honorary Secretary, who is also a member of the Governing Body, is the Deputy Secretary in the Department of Education, Health and Lands. The Deputy Accountant-General, Central Revenues, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 100 Medical students and 70 nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi (Raisina) within easy reach of the old city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the [illegible] for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Civil Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for Hindu, Moslem, Sikh and Christian students. The hospital is a fine modern building with accommodation for 200 in-patients and a commodious out-patients department. The College and Hospital are supported by a grant of Rs. 5,11,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States. Students are prepared for the Intermediate Science Examination, and the M.B., B.S. degree of the Punjab University, with which the College is affiliated.

SENIOR STAFF.

Principal and Professor of Midwifery and Gynæcology—Miss G. J. Campbell, M.D., Ch. B. (Glas.), Women's Medical Service.

Vice-Principal and Professor of Surgery—Miss E. Pfeil, M.D., B.S. (Lond.), W.M.S.

Professor of Medicine—Miss N. E. Trouton, M.B. B.S., (Lond.), M.R.C.S., L.R.C.P., D.T.M. Calcutta.

Professor of Ophthalmology—Miss R. Roulston, M.B., Ch. B. (Glas.), D.O. (Oxon.), W.M.S.

Professor of Pathology—Miss L. S. Chatterji, M.B., Ch. B., (Aberdeen), D.P.H., Cambridge.

Professor of Anatomy—Miss K. J. McDermott, M.B., B.S. (Punjab), W.M.S.

Professor of Physiology—Mrs. Munday, M.B., Ch. B. (Liverpool), W.M.S.

Lecturer in Physics and Mathematics, and Superintendent of the Science Department—Miss J. H. Ross, M.A., B.Sc. (Glas.)

Lecturer in Chemistry—Miss Sosheila Ram, M.A. (Cantab.)

Lecturer in Biology—Miss C. C. Burt, B.Sc. (Edin.)

Lecturer in English—Mrs. Coatman, M.A., Manchester.

Bursar and Warden—Miss M. W. Jesson, M.A. (Cantab.)

Attached to the Hospital there are: (1) a Training School for Nurses, and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendents, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

THE COUNTESS OF DUFFERIN'S FUND.

The National Association for Supplying Medical Aid by Women to the women of India was founded by the Countess of Dufferin in 1886, the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition Branches were formed in each Province, each Branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial [illegible] It gives scholarships to a number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi, it gives post-graduate scholarships for study in the United Kingdom. It has in the past brought from England a certain number of European medical women. It has assisted by grants in aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial Branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs. 3,70,000 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 8 doctors

and a Junior service of 17 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H. E. Lady Irwin, C.I., The Hon. Secretary is the Surgeon to H.E. the Viceroy, and the Secretary Dr. A. C. Scott, C.M.O., W.M.S.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. Over 2,000 midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais It has also done much propaganda work.

NATIONAL ASSOCIATION FOR SUPPLYING MEDICAL AID BY WOMEN TO THE WOMEN OF INDIA.

Amalgamation of Administration.—At a general meeting held in Simla in July 1923 it was decided that the administration of the Funds for the physical welfare of Indian women under the Presidency of the Viceroy's wife should be administered by a single committee and with identical rules. These funds are the Countess of Dufferin's Fund, Women's Medical Service for India, Victoria Memorial Scholarship Fund, Lady Chelmsford All-India Maternity League and Lady Reading Women of India Fund. The President of the Amalgamated Committee is H. E. the Lady Irwin and the Hon. and Joint Secretaries are respectively Lt.-Col. Norman Walker, I.M.S., Surgeon to the Viceroy and Dr. A. C. Scott, W.M.S. The Hon. Treasurer is Sir Frederic Gauntlett.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras, and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a prescribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step farther, through the establishment of the Bombay Presidency Nursing Association, c/o St. George's Hospital, Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with those countries. Government has proposed [illegible] Register preparatory to [illegible]

Nursing Bodies.—The Secretary of the Calcutta Hospital Nurses' Institution is Mr. A. R. Nicholson, Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4, Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Russa Road, South: Nurses' Academy, 6, Suburban Hospital Road; and Nurses Bureau, 37, McLeod Street. In **Madras** there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gosha Hospital at Kilpauk, the Royapetta Hospital and the Ophthalmic Hospital, also the Lady Ampthill Nurses' Institute and the South Indian Nursing Association (now amalgamated, (President Her Excellency Lady Goschen. The Association has under its management—The Lady Ampthill Nurses' Institute, Western Castle Mount Road, Madras. Fully trained and experienced nurses for all cases of illness both among Europeans and Indians, always available The Lady Willingdon Nursing Home, Western Castle, Mount Road, Madras, and Nilgiri Nursing and Convalescent Home. Ootacamund for Medical, Surgical and Maternity cases The Nilgiri Nursing Home affords admirable facilities for convalescents.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr. L. R. W. Forrest at St George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and [illegible] definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions

o a d n a n o wo f associations are as follows :—

St. George's Hospital Nursing Association. Hon. Secretary: F. S. Thornely, Esq., Bombay.

Jamsetji Jijibhoy Hospital Nursing Association, Bombay. Hon. Secretary: Dr. M. V. Mehta, F.I. C.P.

Goculdas Tejpal Hospital Nursing Association. Secretary: C. A. Thomas, Esq., I.C.S., Old Custom House, Bombay.

Cama Hospital Nursing Association, Bombay. Hon. Secretary: H. C. B. Mitchell, Esq.

Sassoon Hospital Nursing Association Poona. Hon. Secretary: A. C. Wild, Esq., I.C.S.

Karachi Civil Hospital Nursing Association, Karachi. Hon Secretary: R. D. Hood, Esq.

Nasik Civil Hospital Nursing Association. Hon. Secretary: Civil Surgeon, Nasik.

Ahmedabad and Lely Memorial Nursing Association, Ahmedabad. Hon. Secretary: Civil Surgeon, Ahmedabad.

Bijapur Civil Hospital Nursing Association. Hon. Secretary: Civil Surgeon, Bijapur.

Dharwar Civil Hospital Nursing Association. Hon. Secretary: Civil Surgeon, Dharwar.

Prince of Wales Nursing Association, Aden Hon. Secretary: E. Somerville Murray Esq., Aden.

Kanara Nursing Association Karwar Hon. Secretary: D. S. Dhave, Esq., Karwar.

Victory Nursing Association, Sholapur. Hon. Secretary: Civil Surgeon, Sholapur.

Byramjee Jeejibhoy Hospital Nursing Association, Matheran. Hon. Secretary: Lt.-Col B. B. Paymaster, I.M.S.

Ahmednagar Civil Hospital Nursing Association, Ahmednagar. Hon. Secretary: Civil Surgeon.

Panch Mahals Nursing Association. Godhra. Honorary Secretary. Civil Surgeon.

After further experience it was felt that it is undesirable to have a considerable number of detached and independent nursing associations, training and certifying nurses, without any common standard of entrance examination, or certification. It was therefore decided to establish the Bombay Presidency Nursing Association which came into existence in the year 1910.

The principle on which the Bombay Presidency Nursing Association works is a central system of examination, certification, registration and control. It is now the only nursing, examining, registering and certifying body in the Bombay Presidency. At the same time, the local associations retain entire charge of their local funds excepting Provident funds which have been transferred to the Central fund, and also entire control of the nurses when they are in their

n n p n Go n ment for absorbing the personnel of the local associations into a Presidency Nursing Association. This will not however affect the individuality of local associations which will continue to control their own funds and to exercise control over local establishments, subject in the latter case to such limitations as a revision of the nature in question will require.

The Association commenced its operations on the 1st April 1911. The institutions recognized under the by-laws for the training of nurses at present are—St. George's Hospital, J J Hospital Cama and Albless Hospital, Bai Motlabai Hospital, Bombay; Hutteesing and Premabai Civil Hospital, Ahmedabad; Civil Hospital, Belgaum; Morarbhai Vrijbhukhandas Hospital Surat; Karachi Civil Hospital, Karachi; Sassoon Hospital, Poona; State General Hospital, Baroda; King Edward Memorial Hospital, Sholapur; V. J. Hospital, Ahmedabad; Civil Hospital, Nasik; Dufferin Hospital, Karachi, King Edward Memorial Hospital Parel Bombay; Zenana Mission Hospital, Bombay and the following for the training of Midwives M. V. Hospital, Civil Hospital, Surat; Victoria Jubilee and King Edward VII Hospital Ahmedabad; Bai Motleebai Hospital, J J Hospital, Cama and Albless Hospital, Bombay; Dufferin Hospital, Karachi; Sassoon Hospital, St. Margaret's Hospital, King Edward Memorial Hospital, Poona; Civil Hospital, Belgaum; Dufferin Hospital, Sholapur; Wadia Maternity Homes, Supari Bag, Parel, Bombay Civil Hospital, Ahmedabad; Civil Hospital Nasik; King Edward Memorial Hospital, Sholapur. Achratlal Girdharlal Maternity Home, Ahmedabad; Zenana Mission Hospital, Broach

Provision for retiring allowances is made for all members on the basis of a Provident Fund and a Nursing Reserve has been established for employment in emergencies such as war, pestilence or public danger or calamity.

Address:—The Secretary, Bombay Presidency Nursing Association, Secretariat, Bombay

Lady Minto's Indian Nursing Association.—In 1906 this Association was inaugurated replacing the Punjab and Up-country Nursing Association for Europeans in India, which Society, established in 1892, had accomplished much useful work in this country. Owing, however, to lack of funds it was found impossible to continue its administration and to carry out the expansion of the work so urgently called for. The name of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon. Lady Lyttleton, Lady Helen Munro Ferguson and Mrs. Cottrell, while Mrs. Sheppherd by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to provide an enlarged Nursing organisation, but mainly owing to financial reasons she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association, recognising the need for expansion, consented to take over the present Association and approached Lady Minto before she left England in 1905 for co

operation towards this project. and after much consideration and discussion with the Government of India, Lieut.-Governors and Commissioners of Provinces, the present Association was established An appeal by Lady Minto, addressed to the public both in England and India, was responded to most generously, and sufficient funds were collected to form an endowment fund, which has in spite of fluctuations increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association."

The duties of the Home Committee are, as before, largely concerned in dispatching—as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus, Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Lady Irwin is President of the Central Committee in India.

Hon. Secretary: Lt.-Colonel Hay Thorburn, I.M.S.

Hon Treasurer: W. J. Litster, Esq, O.F.E., C.I.E.

Chief Lady Superintendent: Miss G. Bickett. Address—Central Committee, L.M.I.N.A., Viceregal Lodge, Simla, or Delhi.

Hon. Secretary, Home Committee: Lt Col Sir Warren R. Crooke-Lawless, C.B., C.I.E., O.B.E., LL.D., House Governor, Osborne, Isle of Wight.

Secretary, Home Committee: Miss M. E Ray R.R.C., 54, Ashburnham Mansions, Chelsea

Nurses' Organizations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses Association of India, and has the one set of officers. The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession The Associations have a membership of 472 including nurses trained in ten or more different countries, Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are affiliated with the international Council of Nurses.

President: Mrs. G. D. Franklin, 83, Rajpur Road, Delhi.

Hon. Secretary and Treasurer: Miss Gadsden General Hospital, Madras.

THE WOMAN SUFFRAGE MOVEMENT.

Within the abnormally short period of nine years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in six of its most progressive Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the **Municipal franchise** had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified

to vote for the Bombay Corporation and a fair percentage of these have polled at each election, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 twenty-two women have become Municipal Councillors and members of Local Government Boards, four of whom were *elected* by Bombay City voters, the others having been nominated.

•

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in repre[illegible] interment of one [illegible] stimulated politic[illegible] consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation

'Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (J. 3) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (3) that 'the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that 'a full measure of Local Self-Government should be immediately granted,' we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self Government elsewhere in the British Empire The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life.

The year 1919 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for and the country's support of the inclusion of women in the new franchise.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs Annie Besant, Mrs. Sarojini Naidu and Mrs and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should decide by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Travancore, a very progressive Indian State was the first to grant the Legislative vote to women at the close of 1920, and it was promptly followed by the Indian State of Jhalawar In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution [illegible] Madr[illegible] to remove the [illegible] regard to the [illegible] During the mor[illegible] between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April 1st and after a short discussion, in which it was evident that opposition came only from the Muhammadan members, the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future. When the division was taken, it resulted in the resolution being carried by a majority of 34. Madras has thus the honour of being the first Province in British India to enfranchise its

and it has done ungrudgingly and

unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men.

Mr. Trivedi brought forward a Woman Suffrage Resolution in the **Bombay** Legislative Council during the same session, but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Saheb Hari lal Desaibhai Desai of Ahmedabad, Deputy President of the Council. As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and for a suffrage meeting of Marathi and Gujerati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The **Bombay** Council Debate on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was satisfactory to the suffragists, the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Presidencies gave the lead to the other Provinces. In September, 1922, Mr. S. M. Bose, in the **Bengal** Council, moved a Woman Suffrage Resolution, which was debated for three days but finally defeated by 56 to 37 votes, a *bloc* of 40 Muhammadan members voting solidly against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a vote of 54 to 38.

Mr. Devaki Prasad Sinha's similar Resolution in the **Behar and Orissa** Legislative Council was defeated by only a 10 votes' majority.

These Debates proved so educational to their respective Provinces that the Bengal and Behar Provinces have since granted qualified women the Municipal vote.

In February, 1923, a world suffrage record was made by the *unanimous* vote of the **United Provinces** Legislative Council in favour of Woman Suffrage.

In 1926 the Punjab granted woman suffrage without a division, thus there now remain in India only the Central Provinces and Behar where women are still unenfranchised.

The new Reform Bill for **Burma** has included the grant of woman suffrage to the qualified Burmese women, and further made provision for their election as Councillors if the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1922, the **Mysore** Legislative Council unanimously passed the Woman Suffrage Resolution. The vote for the Representative Assembly of Mysore was granted to women in October, 1922. The vote for Mysore Legislative Franchise was granted to the Mysore women by H. H. The Maharaja and His Privy Council in June 1923. In October, 1924, **Assam** Provincial Council granted Woman Suffrage for its Province by 26 to 8. It also has been the first Province to pass a Resolution in favour of allowing women to enter the Council as members.

There is little doubt that it will be only a few years at most before all the provinces of India will have granted woman suffrage, and the right to vote will advance the interests of women immensely along the lines of education, health, housing, morality and social customs.

The Indian Native States of **Travancore, Cochin and Rajkot** are the only places in India where the sex disqualification has been completely removed from the statute book. These have allowed women the right to stand for election for the Legislative Council as well as the right to vote for it, and two women have been elected to the newly formed Representative Council of Rajkot. The year 1925 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poonem Lukhose became a member of the Travancore Legislative Council on taking the position of State Darbar Physician. She is Minister for Health to the State. Cochin State has nominated Mr. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bill the Councils had no power to alter the disqualification of sex which remains against the right to stand as candidates for election to the Councils. This could only be changed by the vote of the British Parliament; and the gaining of this right remained as a further objective of the women suffragists. Many large, influential meetings were held claiming the right of women to entry of the Legislatures. A deputation of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution, but only for those provinces which had already granted women the Legislative franchise. The Legislative Assembly has passed by a large majority a Resolution granting the Assembly franchise to the women of such Provinces. Accordingly in November 1923, women in India voted for the first time for the elections of both Provincial Legislative Councillors and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly large in Bombay and Madras Presidencies and comprised women of all castes and communities.

In April, 1926, as a result of a favourable recommendation of the Muddiman Committee on Franchise Reforms, the Rule was changed in the Reform Bill which disqualified women from entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies. Again Madras Council, on the 17th July, was the first to pass a Resolution admitting women to its membership. Bombay and the Punjab have followed its lead in August and October respectively. This has enabled women to become members of the new Councils which will function

for the next three years. But the permission came too late for women to stand for election with any great chance of success, so the Women's Indian Association is asking that women be nominated by Government for the new Councils in those Provinces which have voted to admit them, and that women also be nominated to the Assembly and the Council of State. Thus this year marks another milestone passed on the road to the complete political emancipation of Indian womanhood.

In 1926 the Central Provinces, the Punjab and Bengal, all granted the franchise to women, so that at the end of 1927 the only unenfranchised Province is Behar and Orissa. The year 1927 was notable for the nomination of the first Woman member to a Legislative Council in British India, the recipient of the honour being Dr. Muthulakshmi Ammal and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council, to the Office of Deputy-President of the Council.

The number of women enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis of the franchise, though the grant of the vote to every graduate of seven years' standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibilities will be those who rightly will be the legislating influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and will be adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association is the only defined Suffrage Society almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the following ladies have identified themselves specially with the movement: Lady D. Tata, Lady A. Bose, Lady T. Sadasivaier, the Begum of Cambay, Mrs. Sarojini Naidu, Mrs. Jaiji Jehangir Petit, Mrs. Tata, Mrs. Wadia, Mrs. Jinarajadasa, Mrs. A. Besant, Mrs M. E. Cousins, Mrs Srirangamma, Mrs. Chandrasekhara Iyer, Miss S. Sorabji, Mrs. Khedkar, Dr. Mistry, Dr. Muthulakshmi Ammal, Mrs. Palmer, Mrs. Saraladevi Choudhuri, Mrs. Kumudini Basu, Mrs. K. N. Roy, Lady Shafi, Mrs. Hassan Imam, Miss S. B. Das, Mrs Rustomji Faridoonji, Mrs. B. Rama Rao, Mrs. Deep Narain Singh, Mrs. Raschid, Mrs. van Gildermeester, etc.

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immoveable properties are usually assessed at 16⅔ years purchase on the nett Municipal assessment. For estate under Rs. 10,000 the probate duty payable is 2 %, between Rs. 10,000 and Rs. 50,000 the duty payable is 2½%. Over 50,000 rupees the duty payable is 3%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted :—

1. Debts left by the deceased including mortgage encumbrances
2. The amount of funeral expenses.
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immoveable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no-objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted

Warrant of Precedence.

A new Warrant of Precedence or India in supersession of the notification published on February 10, 1899, which has been approved by His Majesty the King Emperor of India, was published in 1922. Henceforth the following table will be observed with respect to the rank and precedence of persons named, as under:—

1 Governor-General and Viceroy of India.
2 Governors of Provinces within their respective charges.
3 Governors of Madras, Bombay and Bengal.
4 Commander-in-Chief in India.
5 Governors of the United Provinces, Punjab Behar and Burma.
6 Governors of the Central Provinces and Assam.
7 Chief Justice of Bengal.
8 Bishop of Calcutta, Metropolitan of India.
9 Members of the Governor-General's Executive Council.
10. Commander-in-Chief of His Majesty's Naval Forces in the East Indies.
11. President of the Council of State.
12 President of the Legislative Assembly.
13. Chief Justice of a High Court other than that of Bengal.
14. Bishops of Madras and Bombay.
15. Agents to the Governor-General in Rajputana, Central India and Baluchistan, Chief Commissioner of the North-West Frontier Province, Members of Executive Councils and Ministers of Governors and Lieutenant-Governors, Political Resident in the Persian Gulf, Residents at Hyderabad and in Mysore, and Commissioner in Sind,—within their respective charges.
16. Chief of the General Staff; Chief Commissioner of Railways; General Officer Commanding Northern, Southern, Eastern and Western Commands, and Officers of the rank of General.
17. Members of the Executive Councils and Ministers in Madras, Bombay and Bengal.
18. Members of the Executive Councils and Ministers, United Provinces, Punjab, Burma and Behar.
19. Agents to the Governor-General in Rajputana, Central India and Baluchistan; Chief Commissioner of the North-West Frontier Province; Political Resident in the Persian Gulf; and Residents at Hyderabad and in Mysore.
20. Members of the Executive Councils and Ministers, Central Provinces and Assam.
21. Presidents of Legislative Councils within their respective Provinces.
22. Chief Judges of Chief Courts; and Pulsne Judges of High Courts.
23. Lieutenant-Generals.
24. Comptroller and Auditor-General; President of the Public Service Commission and President of the Railway Board.
25. Bishops of Lahore, Rangoon, Lucknow and Nagpur.
26 Members of the Railway Board, Railway Financial Commissioner; and Secretaries to the Government of India.
27. Additional Secretaries and Joint Secretaries to the Government of India; Commissioner in Sind; Financial Adviser, Military Finance; Judges of Chief Courts; and Members of the Central Board of Revenue.
28. Chief [illegible]oner of the Andamans and Chief Commissioner of Delhi,—within their respective charges; Chief Secretaries to the Governments of Madras, Bombay and Bengal Agent to the Governor-General, Punjab States when within the Punjab.
29. Commissioner of Revenue and Customs, Bombay; Consulting Engineer to the Government of India; Development Commissioner Burma, Director of Development, Bombay Director-General, Indian Medical Service Director-General of Posts and Telegraphs, Financial Commissioners; Judicial Commissioners of Oudh, Central Provinces, Sind and Upper Burma; Major-Generals; members of a Board of Revenue; Surgeon-Generals.
30. Vice-Chancellors of the Indian Universities.
31. Agents of State Railways; Controller of the Currency; Additional Judicial Commissioners; Agency Commissioner, Madras; Commissioners of Divisions, and Residents of the 2nd Class,—within their respective charges
32. Members of the Indian Civil Service of 30 years' standing (not holding any other appointment mentioned in this Warrant).
33. Advocate-General, Calcutta.
34. Advocates-General, Madras and Bombay
35. Chief Secretaries to Governments other than those of Madras, Bombay, Bengal and Assam.
36. Bishops (not territorial) under license from the Crown.
37. Accountants-General, Class I; Agricultural Adviser to the Government of India, Archdeacons of Calcutta, Madras and Bombay Census Commissioner for India; Chief Controller of Stores, Indian Stores Department, Colonels Commandant and Colonels on the Staff; Commissioner, Northern India Salt Revenue; Director Intelligence Bureau; Director-General of Archæology in India; Director of the Geological Survey Director, Royal Indian Marine, when an officer of the Royal Navy of rank lower than Rear-Admiral or an officer of the Royal Indian Marine; Educational Commissioner with the Government of India; His Majesty's Senior Trade Commissioner, Calcutta; Inspector General of Forests; Military Accountant-General; Opium Agent, Benares; Sanitary Commissioner with the Government of India; and Surveyor General of India.
38. Additional Judicial Commissioners; Agency Commissioner, Madras; Chief Commissioner of the Andamans; Chief Commissioner of Delhi Chief Secretary to the Government of Assam, Commissioners of Divisions; and Residents of the 2nd Class.
39. Private Secretary to the Viceroy; Secretaries; Additional Secretaries and Joint Secretaries to Local Governments.
40. Accountants-General other than Class I; Chief Auditors, Eastern Bengal Railway and North-Western Railway; Chief Conservators of Forests; Chief Engineers; Chief Engineer, Telegraphs; Colonels; Command Controllers of Military Accounts; Deputy Controller of the Currency at Bombay; Director of the Botanical Survey of India; Directors, Civil Engineering Mechanical Engineering, Traffic and Establishment and Railway Board; D[illegible] of

Commercial Intelligence; Director-General of Observatories; Directors of Public Instruction under Local Governments; Director, Zoological Survey; Financial Adviser, Posts and Telegraphs; His Majesty's Trade Commissioners, Bombay and Calcutta; Inspectors-General, Civil Hospitals; Inspectors-General of Police under Local Governments and in the North-West Frontier Province; Inspectors-General of Prisons under Local Governments; Members of the Indian Civil Service and of the Indian Political Department of 23 years' Civil service, if not holding any other appointment mentioned in this Warrant; Mint Masters, Calcutta and Bombay; President of the Forest College and Research Institute; Provincial Sanitary Commissioners; Superintendents of the Imperial Survey of India; and Traffic Managers and Locomotive Superintendents of State Railways.

41. Military Secretary to the Viceroy.

42. Solicitor to the Government of India; and Standing Counsel to the Government of India.

43. Archdeacons of Lahore, Lucknow, Rangoon and Nagpur; and Presidency Senior Chaplains of the Church of Scotland.

44 Chairman of Port Trusts and of Improvement Trusts of the Presidency towns, Rangoon and Karachi; Members of the Public Service Commission; Non-official Presidents of Municipal Corporations in Presidency towns and Rangoon within their respective municipal jurisdictions; Settlement Commissioners; Chief Executive Officers of the Municipalities of the Presidency towns and Rangoon within their charges; and Chief Inspector of Mines.

45. Collectors of Customs; Collectors and [illegible] of [illegible]; Collector of Stamp [illegible] lector of Land Revenue, [illegible] of Ajmer-Merwara; Deputy Commissioners of Districts, and Deputy Commissioner, Port Blair; Divisional and District and Sessions Judges (including the Judicial Commissioner of Chota Nagpur); Political Agen[illegible] and [illegible], and Residents (othe[illegible] —within [illegible] s oners of [illegible]; [illegible] Affairs and Government Advocates under Local Governments.

46. Deputy Financial Adviser, Military Finance; Deputy Secretaries to the Government of India; Director, Central Bureau of Information, Government of India; Director of Inspection, Indian Stores Department; Director of Purchases and Intelligence, Indian Stores Department; Establishment Officer in the Army Department and to the Railway Board.

47. Director, Central Research Institute, Kasauli, Director of the Indian Institute of Science; and Principal of the Thomason Civil Engineering College, Roorki.

48. Assistant to the Inspector-General of Forests; Commandant, Frontier Constabulary, North-West Frontier Province; Commissioners of Police in the Presidency towns and Rangoon; Comptroller, Assam; Conservators of Forests; Controller of Army Factory Accounts; [illegible] of Marine A[illegible] Controller Royal Air Force Accounts; Deputy Chief Engineer, Telegraphs; Deputy Director General Indian Medical Service; Deputy Director-General of Post Office; Deputy Director-General, Telegraph Traffic; Deputy Director, Intelligence Bureau; Deputy Military Accountant-General Director, Medical Research; Director of Wireless Directors of Telegraph Engineering; District Controllers of Military Accounts; Lieutenant Colonels: Members of the Indian Civil Service and of the Political Department of 18 years' Civil Service, if not holding any other appointment mentioned in this Warrant; Mining Engineer to the Railway Board, Postmasters-General, and Superintending Engineers.

49 Assay Master, Bombay; Chief Auditor, Oudh and Rohilkhand Railway; Deputy Controllers of the Currency, Calcutta and Northern India; and Deputy Controller General.

50. Actuary to the Government of India Chief Inspector of Explosives; Chief Judges of Small Cause Courts, Presidency towns and Rangoon; Controller of Printing, Stationery and Stamps; Director, Imperial Bacteriological Laboratory, Muktesar; Directors of major Laboratories; Director of Public Instruction, North-West Frontier Province.

51. Private Secretaries to Governors, and Secretaries and First Assistants in 1st Class Residencies.

52. Administrators-General; Chief Presidency Magistrates, Deputy Agents, Deputy Traffic Managers and Officers of similar status of State Railways; Deputy Directors, Railway Board; Metallurgical Inspector, Jamshedpur; and Officers in Class I of the General of the Public Works List of the Indian Finance Department.

53. Commissioner of Labour, Madras; Controller of Patents; Deputy Inspectors-General of Police, Directors of Agriculture; Directors of Fisheries in Bengal and Madras; Directors of [illegible] Directors of Land Records; Excise [illegible] Railway [illegible] gent to the Governor-General, Rajputana; Inspectors-General of Registration; Principal, Research Institute Cawnpore, and Registrars of Co-operative Societies.

54 District Judges not being Sessions Judges within their own districts.

55. First Assistant to the Residents at Aden, Baroda and in Kashmir; Judicial Assistant, Kathiawar; and Chairman of Port Trust, Aden

56. Military Secretaries to Governors.

57. Senior Chaplains other than those already specified.

58. Sheriffs within their own charges.

59. Collectors of Customs; Collectors and Magistrates of Districts; Collector of Stamp Revenue and Deputy Collector of Land Revenue Calcutta; Commissioner of Ajmer-Merwara, Deputy Commissioners of Districts; Deputy Commissioner, Port Blair; Divisional and District and Sessions Judges (including the Judicial Commissioner of Chota Nagpur); Political Agents and Superintendents; Residents (other than those of the 1st and 2nd Class) and Settlement Officers

60. Assistant Directors-General of the Post Office, 1st grade; Chief Forest Officers, Andamans and Nicobars; Deputy Directors of Commercial Intelligence; Deputy Director-General of Archæology; Deputy Director of Industries, United Provinces; Deputy Postmasters-General, 1st grade; Deputy Registrar of Co-operative Societies, United Provinces; Deputy Superintendents of the Imperial Survey of India; Government Solicitors other than the Solicitor and Assistant Solicitor to the Government of India; Managing Director, Opium Factory, Ghazipur; Officers of the Indian Educational Service and of the Indian Institute of Science of 18 years' standing, Principals of major Government Colleges; Registrars to the High Courts; Secretaries to Legislative Councils Senior Inspectors of Mines; Assistant Collectors of [illegible] Assistant E[illegible] Engineers o[illegible] holding a charge declared to be of not less importance than that of a division; Officers of the Archæological and other Scientific Departments; Officers of the Civil Veterinary Department; Officers of Class II of the General or the Public Works List of the Indian Finance Department; Officers of the Indian Agricultural Service; Officers of the Indian Forest Department; Officers on the Superior List of the Military Accounts Department; Officers of the Superior Revenue Establishment of State Railways who hold the rank of district officer or a position of a similar status and Superintendents and Deputy Commissioners of Police of 20 years' standing. Principal, School of Mines and Geology; Instructor, Wireless; Wireless Research Officers, Divisional Engineers and Assistant Divisional Engineers, Wireless; Officers of the 1st Division, Superior Traffic Branch of the Telegraph Department of 20 years' standing, Superintendent of the Government Test House.

61. Assistant Solicitor to the Government of India; Assistant Director, Public Information, Government of India, and Under-Secretaries to the Government of India.

62. b a d n ta Off d maximum pay of the time-scale; and Sub-Deputy Opium Agents.

1. The entries in the above table apply exclusively to the persons entered therein, and while regulating their relative precedence with each other, do not give them any precedence over members of the non-official community resident in India who shall take their place according to usage.

2. Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se* according to the date of entry into that number.

3. When an officer holds more than one position in the table he will be entitled to the highest position accorded to him.

4. Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents.

5 All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army, to have the same rank with reference to civil servants as is enjoyed by military officers of equal grades.

6 All other persons who may not be mentioned in this table to take rank according to general usage, which is to be explained and determined by the Governor-General in Council in case any question shall arise. When the position of any such person is so determined and notified, it shall be entered in the table in italics, provided he holds an appointment in India.

7 Nothing in the foregoing rules to disturb the existing practice relating to precedence at the Courts of Indian States or on occasions of intercourse with Indians, and the Governor-General in Council to be empowered to make rules for such occasions in case any dispute shall arise.

8 The following will take courtesy rank as shown :—

Consuls-General, Immediately after article 37, which includes Colonels Commandant; Consuls, Immediately after article 40, which includes ... In ... d ... af ... le 63, which includes Majors.

Consular officers de carriere will in their respective grades take precedence of consular officers who are not de carriere.

9. The following may be given, by courtesy, precedence as shown below, provided that they do not hold appointments in India :—

Peers according to their precedence in England; Knights of the Garter, the Thistle and St. Patrick; Privy Councillors; Members of the Council of the Secretary of State for India — Immediately after Members of the Governor General's Executive Council, article 9.

Baronets of England, Scotland, Ireland and the United Kingdom, according to date of Patents, Knights Grand Cross of the Bath; Knights Grand Commander of the Star of India; Knights Grand Cross of St. Michael and St. George Knights Grand Commander of the Indian Empire, Knights Grand Cross of the Royal Victorian Order; Knights Grand Cross of the Order of the British Empire. Immediately after the Commissioner in Sind (Article 15); Knights Commander of the Bath; Knights Commander of the Star of India; Knights Commander of St Michael and St. George, Knights Commander of the Indian Empire; Knights Commander of the Royal Victorian Order; Knights Commander of the Order of the British Empire and Knights Bachelor.—Immediately after the Residents of the Second Class, Article 31

10. All ladies, unless by virtue of holding an appointment themselves they are entitled to a higher position in the table, to take place according for the rank herein assigned to their respective husbands, with the exception of wives of Peers and of ladies having precedence in England independently of their husbands, and who are not in rank below the daughters of Barons such ladies to take place according to their several ranks, with reference to such precedence in England, immediately after the wives of Members of the Governor-General's Executive Council.

Indian Orders.

The Star of India.

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1876, 1897, 1902 and 1911, and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire; the second and third classes for services in the Indian Empire of not less than thirty years in the department of the Secretary of State for India. It consists of the Sovereign, a Grand Master (the Viceroy of India), the first class [illegible] Grand Commanders (23 [illegible] the second class of one [illegible] Commanders, and the third [illegible] and twenty-five Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The Insignia are (i) the Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white rose, and in the centre an Imperial Crown; all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular riband, tied at the ends and inscribed with the motto of the Order, *Heaven's Light our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cordon of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky-blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander [illegible] (a) around his neck [illegible] the same colours [illegible] Commander, and [illegible] of a smaller size, (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon, tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears from his left breast a badge of the same form as appointed for a Knight Commander, but of a smaller size pendent to a like ribbon of the breadth of one and a half inches. All Insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at Calcutta.

Sovereign of the Order:—His Most Gracious Majesty The King-Emperor of India.

Grand Master of the Order:—His Excellency the Viceroy and Governor-General of India, the Right Honourable Lord Irwin, P.C., G.M.S.I., G.M.I.E.

Officers of the Order:—*Registrar*. Col. the Hon. Sir George Arthur Charles Crichton K.C.V.O., Secretary of the Central Chancery of the Orders of Knighthood, St. James' Palace London, W. 1.

Secretary: The Hon'ble Sir John Thompson K.C.I.E., Secretary to the Government of India in the Foreign and Political Department.

The Most Eminent Order of the Indian Empire.

This Order, instituted by H. M. Queen Victoria, Empress of India, Jan. 1st, 1878, and extended and enlarged in 1886, 1887, 1892, 1897, and 1902 is conferred for services rendered to the Indian Empire, and consists of the Sovereign, a Grand Master, forty Knights Grand Commanders (of whom the Grand Master is first and principal), one hundred and forty Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 20 nominations in any one year); also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order, as well as certain Additional Knights and Companions appointed by special statute Jan. 1st, 1909, commemorative of the 50th Anniversary of the assumption of Crown Govt. in India.

The Insignia are: (i) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride, and Indian roses, in the centre the Imperial Crown, the whole linked together with chains; (ii) The STAR of the Knight Grand Commander, comprised of five rays of silver, h ing a sma ray of go d betw n ea th m the whole a e nately p a n and s aled u ng f om a go d cent e h ing th e n Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatricis Auspiciis*, and surmounted by an Imperial Crown gold; (iii) The BADGE consisting of a rose, enamelled gules, barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatricis Auspiciis*, surmounted by an Imperial Crown, also gold; (iv) The MANTLE is of Imperial purple satin, lined with and fastened by a cordon of white silk, with purple silk and gold tassels attached. On the left side a representation of the Star of the Order.

A Knight Commander wears: (a) around his neck a ribbon two inches in width, of the same colour (purple) and pattern as a Knight Grand Commander, pendent therefrom a badge of smaller size: (b) on his left breast a star, similar to that of the first class, but the rays of which are all of silver.

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order at Calcutta.

A Companion wears from the left breast a [illegible] breadth of one and a half inches.

Sovereign of the Order:—His Most Gracious Majesty The King-Emperor of India.

Grand Master of the Order:—H. E. the Viceroy Lord Irwin.

Officers of the Order:—The same as for the Order of the Star of India.

Distinctive Badges.—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of 'Diwan Bahadur', 'Sardar Bahadur', 'Khan Bahadur', 'Rai Bahadur', 'Rao Bahadur', 'Khan Sahib', Rai Sahib' and 'Rao Sahib'. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border, for the titles of Khan, Rai and Rao Bahadur light red with a dark red border, and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

A Press Note issued in November, 1914, states:—The Government of India have recently had under consideration the question of the position in which miniatures of Indian titles should be worn, and have decided that they should be worn on the left breast attached by a brooch, and not suspended round the neck by a ribbon as prescribed in the case of the badge itself. When the miniatures are worn in conjunction with other decorations, they should be placed immediately after the Kaiser-i-Hind Medal.

Indian Distinguished Service Medal.—This medal was instituted on June 28th, 1907, by an Army Order published at Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India It bears on the obverse the bust of King Edward VII and on the reverse a laurel wreath encircling the words For Distinguished Service. The medal, 1⅜ inches in diameter, is ordered to be worn immediately to the right of all war medals suspended by a red ribbon 1¼ in. wide, with blue edges ⅜ in. wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit.—This reward of valour was instituted by the H. E. I. Co in 1837, to reward personal bravery without any reference to length of service or good conduct It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the star is surrendered to the Government, and the superior class substituted, but in the event of the death of the recipient his relatives retain the decoration The order carries with it an increase of one-third in the pay of the recipient, and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points, 1⅜ in. in diameter, having in the centre a ground of dark blue enamel bearing crossed swords in gold, within a gold circle, and the inscription Reward of Valour, the whole being surmounted by two wreaths of laurel in gold. The Second Class star is of silver, with the wreaths of laurel in gold; and the Third Class entirely of silver The decoration is suspended from a simple loop and bar from a dark-blue ribbon 1½ in in width with red edges, bearing a gold or silver buckle according to class

Order of British India.—This order was instituted at the same time as the Order of Merit, to reward native commissioned officers for long and faithful service in the Indian Army Since 1878, however, any person European or native, holding a commission in a native regiment, became eligible for admission to the Order without reference to creed or colour The First Class consists of a gold eight-pointed radiated star 1½ in. in diameter. The centre is occupied by a lion statant gardant upon a ground of light-blue enamel, within a dark-blue band inscribed Order of British India, and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band $\frac{9}{16}$ in. in diameter, through which the ribbon, once blue, now red, is passed for suspension from the neck. The Second Class is $1\frac{7}{16}$ in in diameter with dark-blue enamelled centre there is no crown on this class, and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title Sirdar Bahadur, and an additional allowance of two rupees a day

and Second ... of ... and ... a ... of one rupee per day.

Indian Meritorious Service Medal.—This was instituted on July 27th, 1858, and on receipt of the medal the order states "a non-commissioned officer must surrender his Long Service and Good Conduct medal"; but on being promoted to a commission he may retain the M. S. medal, but the annuity attached to it will cease. On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind, encircled by the ... Victoria Kaisar-i-Hind. On ... is a wreath of lotus leaves enclosing a palm tied at the base, having a star between the two wreaths is the ... meritorious service. Within the ... is the word India. The medal, 1 ... inches, is suspended from a scroll of ... ribbon 1¼ in. wide. The ... during the reigns of ... bear on the obverse their ... with the legend altered to EDWA... GEORGIVS.

THE KAISAR-I-HIND MEDAL.

This decoration was instituted in 1900, the preamble to the Royal Warrant—which was amended in 1901 and 1912—being as follows.—"Whereas We, taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour: Now for the purpose of attaining an end so desirable as that of thus distinguishing such services aforesaid, We have instituted and created, and by these presents for Us, Our Heirs and Successors, do institute and create a new Decoration." The decoration is styled "The Kaisar-i-Hind Medal for Public Service in India" and consists of two classes. The Medal is an oval shaped Badge or Decoration—in gold for the First Class and in silver for the Second Class—with the Royal Cypher on one side and on the reverse the words "Kaisar-i-Hind for Public Service in India;" it is suspended on the left breast by a dark blue ribbon.

THE VICTORIA CROSS.

The announcement, made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross, gave satisfaction which was increased during the War and afterwards by the award of that decoration to the following :—

Subadar (then Sepoy) Khudadad Khan, 129th Baluchis.—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded, remained working his gun until all the other five men of the gun detachment had been killed.

Naick Darwan Sing Negi, 1-39th Garhwal Rifles.—For great gallantry on the night of the 23rd-24th November 1914 near Festubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches, and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

Subadar (then Jamadar) Mir Dast, 55th Coke's Rifles.—For most conspicuous bravery and great ability at Ypres on 26th April 1915, when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa, 2-3rd Gurkha Rifles.—For most conspicuous bravery during operations against the German trenches south of Mauquissart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

Havildar (then Lance-Naick) Lala, 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy he dragged him into a temporary shelter which he himself had made, and in which he had already bandaged four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant, and it seemed certain death to go out in that direction, but Lance-Naik Lala insisted on going out to his Adjutant, and offered to crawl back with him on his back at once. When this was not permitted, he stripped off his own clothing to keep the wounded officer warmer and stayed with him till just before dark when he returned to the shelter. After dark he carried the first wounded officer back to the main trenches, and then, returning with a stretcher carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

Sepoy Chatta Singh, 9th Bhopal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained beside the wounded officer shielding him with his own body on the exposed side. He then under cover of darkness, went back for assistance and brought the officer into safety.

Naick Shahamad Khan, 89th Punjabis.—For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our new line within 150 yards of the enemy's entrenched position. He beat off three counter-attacks, and worked his gun single-handed after all his men, except two belt-fillers, had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two belt-fillers held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Finally, he himself returned and removed all remaining arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance-Dafedar Govind Singh, 28th Cavalry —For most conspicuous bravery and devotion to duty in thrice volunteering to carry messages between the regiment and brigade headquarters, a distance of 1½ miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot, and he was compelled to finish the journey on foot.

Rifleman Karan Bahadur Rana, 23rd Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions, and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire, in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No. 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Karan Bahadur pushed the dead man off the gun, and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew Then switching his fire on the y bombers

[illegible] ont o[illegible] [illegible] k[illegible] gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day and when a withdrawal was ordered assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Ressaldar Badlu Singh, 14th Lancers attached 29th Lancers.—For most conspicuous bravery and self-sacrifice on the morning of the 23rd September 1918, when his squadron charged a strong enemy position on the west bank of the River Jordan, between the river and Kh. es Samariyeh Village. On nearing the position Ressaldar Badlu Singh realised that the squadron was suffering casualties from a small hill on the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and an entire disregard of danger charged and captured the position, thereby saving very heavy casualties to the squadron. He was mortally wounded on the very top of the hill when capturing one of the machine guns single-handed, but all the machine guns and infantry had surrendered to him before he died. His valour and initiative were of the highest order.

Rifleman Gobar Sing Negi, 2nd Battalion 39th Garhwal Rifles.—For most conspicuous bravery on 10th March 1915 at Neuve Chapelle. During an attack on th[illegible] German position h[illegible] was one of a bayonet party with bombs wh[illegible] entered their main trench, and was the first man to go round each traverse, driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

Sepoy Ishaw Singh, 28th Punjabis.—For devotion and bravery "quite beyond all praise" in Waziristan on 10th April, 1921. He received a severe gunshot wound in the chest while serving a Lewis gun, and when all the havildars had been killed or disabled he struggled to his feet, called to his assistance two men, and charged and recovered the gun, restoring it to action. He refused medical attention insisting first on pointing out where the other wounded were and on carrying water to them. While the medical man was attending to these wounded he shielded him with his body and he submitted to medical attention himself only after he was exhausted through three hours' continual effort and by loss of blood.

PASSPORT REGULATIONS.

A.—British Subjects.

1. British Indian passports are only issued to British subjects and to British-protected persons.

2. The Indian Passport Regulations do not require persons to obtain passports before embarking from any port in British India, but as practically every other country requires travellers to be in possession of passports for landing, intending travellers are advised to have passports before embarkation. Members of His Majesty's Naval, Military or Air Forces or of the Royal Indian Marine Service travelling on duty and members of the families of such persons when travelling to the United Kingdom at Government expense need not have passports.

3. Passports are not required for journeys by sea from Bombay to British ports in India or to Burma or Ceylon; nor are passports required by British Indian subjects travelling to the Federated Malay States or the Straits Settlements, unless they propose to continue their journey onward.

4. As a passport is valid for five years, there is no objection to anyone applying for a passport weeks or even months in advance of the date of sailing, and much inconvenience and in some cases serious trouble will be avoided by early application. A notice of at least four days should be given for the preparation of a new passport and at least two days for an endorsement, renewal or visa.

5. In order to obtain a passport an application form, showing, among other things, the destination, route and reasons for the proposed journey, must be filled up by the applicant and certified by a Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent, or Notary Public resident in India. Copies of this form can be obtained from any District Magistrate, from the Commissioner of Police, Bombay, by post from the Passport Officer to the Government of Bombay, by personal application at the Passport Office, or from any of the leading Banking and Shipping Agents in Bombay. Two unmounted copies of the photograph of the [illegible] 3 should be submitted [illegible] Fees are not accepted [illegible]

6. The application form when filled up should either be posted with the photographs and fee to the Passport Officer to the Government of Bombay, or should be presented in person at the Passport Office, Bombay.

7. The Passport Office in Bombay is situated in the Civil Secretariat. The office is open from 11 a.m. to 4 p.m. daily, except on Saturdays when it closes at 1 p.m. and on Sundays and public holidays when it is not open at all.

8. The Passport Officer cannot issue passports outside the working hours shown above, and the preparation of a passport takes time. Applicants, therefore, who postpone application to the last moment do so at their own risk.

Iraq.

9. Members of His Majesty's Naval, Military or Air Forces or of the Indian Forces in uniform, and *bona fide*, Muhammadan pilgrims travelling in organised parties and holding a pilgrim pass do not require passports for the journey to Iraq. All other travellers must be in possession of passports, which, except in the case of *bona fide* representatives of firms, persons on a short visit to Iraq or m[illegible]

... another country will not be granted without the previous permission of the local authorities in Iraq. The Passport Officer will, on request, ask for this permission by post, or, if the applicant is prepared to defray the cost of a telegram by cable. Applicants must state clearly the nature of their business and one or more references in Iraq from whom the local authorities can make inquiries regarding the *bona fide* of their journey.

10. Restrictions also exist on travel to various parts of the British Empire and to certain foreign countries. Amongst these may be mentioned Australia, Canada, Constantinople, Egypt, Gibraltar, Mohammerah and Abadan, New Zealand, Palestine, Southern Rhodesia, Union of South Africa, South West Africa and the United States of America. The restrictions apply particularly to Indians. Detailed particulars with respect to each country will be supplied on application.

Foreign Countries.

11. Passports for journeys to or through foreign countries require, after issue, the visa of the Consul concerned. The addresses of the foreign consulates in Bombay are shewn below. Visas are, however, not necessary for Belgium, Denmark, France, Holland, Iceland, Italy, Norway, Spain, Sweden, Switzerland, Liechtenstein, and Luxemburg, provided the names of these countries are entered on the passport.

Renewal.

12. Passports issued before the 1st December 1925 were valid for periods of two years only, whilst those issued after that date are valid for five years. All passports however may be renewed for periods of from one to five years at the option of the holder *from the date of expiration*, but in no case can a passport be extended beyond ten years from the original date of issue. On expiration of that period, or, if at any time the space provided for visas is covered and the holder wishes to travel to countries for which fresh visas are required, a new passport must be obtained. Application for renewal must be made in the prescribed form copies of which may be had from any of the officers mentioned in paragraph 5 above. The fee for renewal is Re. 1 for each year, or portion of a year for which the passport is renewed.

Endorsements.

13. A passport is valid only for the country or countries endorsed on it and fresh endorsements from a British Passport authority are not needed during the validity of the passport for subsequent journeys to these countries. Fresh endorsements may, however, be obtained on the passport for additional countries. Passports endorsed as valid for the British Empire are also available for travelling to territories under British protection or mandate, not however to Palestine, Iraq or Egypt for which countries the passport must be specifically endorsed. No fee is payable for an endorsement.

Marriage.

14. A lady on marriage or re-marriage requires a fresh passport.

15. In the case of a joint passport issued in favour of a husband and wife, the latter cannot travel alone on it, but should take out a fresh passport, surrendering the joint passport for cancellation of her name from it.

B.—Foreigners.

16. No foreigner can hold a British passport

17. Foreigners proceeding direct to their own countries or to, or through, any other foreign countries do not require a British visa on their passports. The nationals of the following countries do not require a British visa for travelling to the United Kingdom (This concession also applies to certain nationals proceeding to certain British Dominions and Colonies and information on this point can be obtained from the Passport Officer):—

Belgium, Denmark, France, Holland, Iceland, Italy, Norway, Spain, Sweden, Switzerland, Liechtenstein and Luxemburg.

18. Foreigners who are subjects of the countries shown below and who are travelling to British territories for which a British visa is necessary should first obtain passports from their consular representatives and should then present them to the Passport Officer for visa, together with a written statement of the reasons for the journey. If the passport of a foreigner bears a British visa which terminates in India and the holder desires to undertake another journey to a territory under British jurisdiction, he should first obtain an endorsement from his consular representative and then present it to the Passport Officer for visa. There are three kinds of visas granted, *viz.*, the Non-transit, Transit and Transhipment. Fees for these vary according to rates charged to British subjects by the foreign countries concerned.

19. Other foreigners should apply for Identity Certificates through the Commissioner of Police, Bombay, or, where such foreigners, reside in the mofussil, through the District Magistrate of the district in which they are residing. Two copies of the applicant's photograph should accompany the application. The fee for a Certificate of Identity is Rs. 1-8-0.

20. The holder of a foreign passport who has obtained a visa granted by a British Passport Authority outside India for a destination which involves landing in, or passing through, India does not need a further visa from the authorities in India.

ADDRESSES OF FOREIGN CONSULATES IN BOMBAY.

Afghanistan.—Amir's Bungalow, Walkeshwar Road, Malabar Hill.

Russia.—20, Esplanade Mansions.
Salvador.—10, Prosunno Kumar, Tagore Street.
Venezuela.—Tagore House, 27, Park Lane.

The School of Oriental Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, and Customs of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School possesses noble and adequate buildings, in Finsbury Circus, provided by the British Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the city. The School provides teaching in more than sixty subjects. In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages are spoken, as it is the aim of the School to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. There is now a whole time lecturer in Phonetics, the classes for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the school.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not on the staff. Various Scholarships are given.

Patron, H. M. the King. *Chairman of the Governing Body*, Sir Harry L. Stephen, LL.M. *Director*, Professor Sir E. Denison Ross, C.I.E., PH.D.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they would were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing populations of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress: fishing and the fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste, and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse from amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of association with the low caste fishermen, and, except in the case of joint stock companies to engage in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras which in 1905 initiated an investigation of the industry, both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1908, and from these beginnings have sprung the local Fisheries Departments of Madras, Bengal and Behar and Orissa. Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal, and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of sea-fishermen in India, there was less urgent need for State help in the industry. Fisheries there were a subject of Government solicitude for five years after the war but they finally ceased to receive any attention after the abolition in 1924 of the short lived Department of Industries to which this subject was allotted.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 sq. miles; outside of a mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East Coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side, is the only possible seagoing fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor, and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured, from September till April weather conditions are good enough to permit even dugout canoes to fish daily. The people of this coast are fond of fish and no difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. The 1921 Census gave 60,4[illegible] adults as subsisting on fishing industries in Malabar and South Kanara, a small number after all considering the immense wealth of these seas. The chief fishes are sardines, mackerel, catfishes and jewfishes (kora or golı): the two first overshadow all others. So greatly in excess of food requirements are the catches of sardines that every year large quantities are turned into oil and manure. The 1925-26 season was a slight improvement over that of last year for 4,8[illegible] tons of oil and 9,850 tons of guano were manufactured as against 2,050 tons of oil and 4,601 tons of guano in the previous year. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres: the material is largely cured for export.

Fish Curing is practised extensively everywhere on the Madras coasts; its present success is due primarily to Dr. Francis Day who, after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bounded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 107 of such yards are scattered along the coast and over 55,000 tons of wet fish are annually cured therein. The total receipts on the administration of these yards for the year 1925-26 was Rs. 3,93,270 and expenditure Rs. 3,76,949. The credit balance on the year's working was therefore Rs. 13,321.

Pearl and Chank Fisheries.—The anticipations of 1924-25 were more than realised in the remunerative and successful pearl fishery which was held at Tuticorin last February and March.

The last pearl-fishery of any consequence was in the year 1889 more than quarter of a century ago. Under the British Rule there have been 16 pearl fisheries including the present. In magnitude the fishery held in 1926 stands fourth. The three previous fisheries which yielded a larger revenue were in the years 1807, 1810 and 1860-61. In the last 100 years the 1926 fishery ranks second and in the last half a century it is easily the first.

The total number of oysters fished was 14,096,839. The fishery yielded a substantial net revenue of Rs. 1,60,237-5-11 indicating both the value of scientific control by a technical department and the efficiency and accuracy of the inspections, surveys and estimates. A cursory examination of the pearl banks this year, so far as monsoon permitted, shows the continuance of oysters on the Tholayiram Par (bank)

and consequently the possibility of another fishery early next year.

Though the best chank season (February and March) was spent in pearl-fishing the premature closure of the pearl fishery, and the long spell of good weather extending till the middle of May combined with the fact that the divers were in the department's en[illegible]
of chank fisheries to [illegible]
and where very me[illegible]
chanks in normal cl[illegible]
fished, in spite of the pearl fisheries. The net receipts therefore from chank fisheries amounted the year to Rs. 2,842-11-6 against Rs. 9,844 in 1924-25. The net profit for 1925-26 was therefore only Rs. 1,64,819.

The Inland Fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence inland fisheries are badly organized and few men devote themselves to fishing as their sole, or even main, occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water: only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh-water fishes of economic importance are the murrel, notable for its virtue of living for considerable period out of water, various carps, and catfishes, the hilsa (in East Coast rivers only), and the catla. In the Nilgiris, the Rainbow trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. The net profits on Inland fishery in 1925-26 were Rs. 8,877.

The Madras Department of Fisheries. As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organized and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. A. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities; in 1907, a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr. James Hornell, F.L.S., as Director, and is now controlled by his successor, Dr. B. Sundara Raj, M.A., Ph.D. The higher staff consists of a Superintendent of Pearl and Chank Fisheries, three Assistant Directors and a Cannery Superintendent. These are respectively in charge of (a the [illegible] fisheries (pearling, banks a[illegible] beche-de-mer, etc.); (b) the co-operative and socio-economic side of the Department's operations; (c) inland pisciculture, (d) deep sea fishing and salt-transport and (e) the experimental and demonstrational fish cannery at Chaliyam in South Malabar. Other officers have charge respectively of sections dealing with education and industrial work, which include a Training Institute for village teachers, fish-curing yards, and oil and guano factories. All the public fishcuring yards till now under the control of the Salt and Abkari Department have passed into the charge of the Fisheries Department. It is now possible to introduce the better methods of cure and improved hygiene which the Department has been straining to popularise, in all the yards. Due to the transfer of the yards the Fisheries Department has a large ramified staff of yard officers (Salt Sub-Inspectors, Petty Yard Officers and peons in almost every large fishing village on the coast. Besides the direct work of issuing salt for curing, the Department will now set itself to train these officers into expert advisers in curing methods and marketing fish, social workers for the inculcation of thrift co-operative and progressive ideas and new industries and lastly as trained observers for recording and reporting on various biological questions connected with fish and fisheries and collecting statistics regarding the value and quantity of sea fish caught and landed.

The activities of the Department are so varied and far-reaching that it is difficult even to enumerate them in the space available much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish oil trade, the creation of a fishguano industry the establishment of a fish cannery and the development of canned goods other than sardines, which alone had been canned previously in Malabar, and the opening of an oyster farm conducted under hygienic conditions. (For details see the Bulletins of the Department issued from the Government Press, Madras) seventeen volumes have been issued to date and the eighteenth volume is in press. All this work has been carried on under serious handicap for want of suitable accommodation for the research staff.

Marine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum Madras, and was thrown open to the public on 21st October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries.

Ever since its opening, being the first of its kind in Asia, it has been immensely popular with the public. The number of visitors rose during the year to 111,931 from 88,027 in the previous year. Two rates of admissions are charged, *viz.*, one anna and four annas. The latter rate is charged on Fridays for the benefit of those who would like to see the Aquarium under less-crowded conditions. The net profit realized last year was Rs. 3,951.

Fishing rights in the large irrigation tanks were transferred from Government to local [illegible] y years ago those tanks are

[illegible] prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bekti (*Lates calcifer*) and the mullets are the most esteemed; apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Polynemus*) pomfrets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the *Indian Museum*. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more steam trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Government has ordered that the Bengal Fisheries Department be reconstituted on an improved basis as soon as funds permit. A Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish byeproducts. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but the old Department made a beginning and once a few societies can be made successful, the news of the benefits conferred on the members will constitute the best possible form of propaganda. The temporary abolition of the Bengal Fisheries Department was regretted by many and it is hoped that it will soon be revived. The fishery wealth of Bengal is enormous and nothing but good can come of intensive investigation and propaganda.

Fresh-water mussels are used extensively in Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, though there is less necessity for a special department to develop marine industries, there is ample scope for most useful work in improving curing methods, in introducing canning, and in the development of minor marine industries particularly those connected with the utilization of bye-products. With this end in view the Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a change is needed in the mediæval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karel, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs. for a rupee.

Owing to retrenchment the appointments of Fisheries officers have been abolished.

The more important sea-fish are pomfrets, soles and sea-perches among which are included the valuable Jew-fishes (*Sciæna* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds."

... The fleet of Bombay fishing boats hail from the coast between Bassein and Surat. These boats are beautifully constructed attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge stretched stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and tea-fishes. The last named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bangda seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and rayfish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, as shark, rays and jew-fishes. The edible oyster trade of Karachi was once extensive, the creeks of the Indus producing a species of oyster superior to that found in Bombay and Madras backwaters and estuaries. Unrestricted exploitation of beds of limited extent inflicted great harm, and now, when various salutary restrictions are imposed, the beds are slow to respond. Occasionally large deposits of the window pane oyster (*Placuna placenta*) are found in the Indus creeks and as these produce seed pearls in abundance, Government leased the beds to the highest bidder. The pearls are largely exported to China for use in medicine. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

In the Gulf of Kutch two pearl fisheries exist, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which in 1905 obtained the services on deputation of Mr. J. Hornell, formerly Director of Fisheries in Madras, for the purpose of examining the Marine potentialities of the Baroda territory in Kathiawar. One of the consequences was the discovery of large deposits of pearl-bearing window-pane oysters, until then unknown; of late years these beds have produced annually from Rs. 15,000 to Rs. 25,000 in revenue, perhaps the best example we have in India of the profitable nature of well-directed scientific enquiry into fishery problems. The Baroda Government, continuing their enlightened interest in the fishery developments, have had two officers trained in the Madras Fisheries Department and now employ them on development work on the Baroda coast.

Experiments in canning are now in progress at one of the chief fishing centres on the Southern Kathiawar coast and already promise considerable success particularly with regard to pomfrets.

Burma.

The exclusive right of fishing throughout the province of Burma belongs by custom of the country to Government, and the Burma Fisheries Act provides for the protection of this right and for regulating the enjoyment of it to the people subject to certain restrictions for the conservation of the fish. The work of the fisherfolk, involving as it does the taking of life, is generally viewed with disfavour by the Burman Buddhists. In certain tracts this attitude is intensified where the proportion of the fisherfolk is not only small but their economic condition are more or less demoralised. Though fishing is generally denounced by Burman Buddhists, yet they consume the fish. The usual argument of the consumers is that they have not taken the life of the fish and therefore have committed no sin. Where fishing is the principal means of livelihood of the majority as in the Delta Districts, religious scruples tend to disappear.

Revenue.—The economic value of any industry or tract of country can, to some extent, be gauged by the revenue it yields. The fisheries yield a substantial revenue (about one-eighth of the total land revenue), and therefore they are one of the most important sources of national wealth. There are two methods of catching fish, namely by nets in the rivers and seas and by traps in leased fisheries. The fishery revenue demand from net licenses amounts to over four lakhs while that from the leased fisheries amounts to more than 44 lakhs. Of the net licenses the greatest revenue comes from Mergui District where not only is the Pearling industry carried on, but leases for collecting green snails and sea slugs are issued. Open lakes, pools of water and small rivers are classed as leased fisheries and are leased by Government to the highest and best bidders at public auction. Here the Irrawaddy Division equals in importance the rest of the province, and of the five districts in the Irrawaddy Division, Maubin District alone yields as much as half of the whole division. Maubin District therefore stands easily first in respect of fishery revenue, and out of the total collected in any year from the whole province, this district alone contributes at least a quarter.

The Delta consists of a series of saucer-shaped islands, many of which have embankments round the greater part of them along the north, east and west; in the hollows of these islands most of the fish come into spawn, and with the floods which overflow the embankment during October the young fry come down-country from Upper Burma.

The principal kinds of fish caught in nets on the sea-coast are (1) Kakkuyan, (2) Kathabaung, and (3) Kathabmyin. These are generally made into salt fish which fetch Rs. 2 to Rs. 3 per viss. The creek and fresh water fish from fisheries are generally ngakhu, ngayan and ngagy. Most of them are sold fresh, but some are converted into salt fish. The fish

caught in the rivers are generally ngathalauk, ngagyin, and ngamyinvin, the predaceous fish.

Fees for net licenses are charged according to the size of the nets. Fisheries which consist of lakes, pools and streams are put up to auction, but as no Burman fisherman has ever been known to keep a proper system of accounts, he seldom or never can gauge the real worth of the fisheries; this coupled with his impulsive nature frequently results in his bids at auction exceeding the value of the fisheries; several fishermen have thus not only brought ruin on themselves but also on their sureties who have not infrequently been sold up. Until these fisheries are brought under some settlement system for revenue assessment, bona fide fisherman must suffer from time to time. Moreover, the local authorities demand more than adequate securities and the furnishing as well as the verifying of these securities invariably mean much expenditure of time and money both to the fisherfolk and to the Government staff. With a view to ameliorate uneconomic conditions by rendering the provisions of security easier, as well as to facilitate collection Government recently introduced what is known as the group system whereby the value of the fisheries is fixed at a reasonable rental, and, instead of an individual system of furnishing security the groups hold themselves severally responsible. In order to enable the poorest of the actual workers to reap the benefit of their labours, nothing short of a co-operative system would be of any avail: this co-operative system has been tried in Tharrawaddy District with some success, by this system every fisherman employed in a fishery becomes a partner in the business and no non-fisherman can ever sweat the bona fide fisherman, poor though he be. The group system, though an improvement on the individual system of bidding and furnishing securities does not do away with the sweating system. It is reported to be attended by quarrelling on the one hand and to condition to reduce the Government rent on the other hand. With the gradual introduction of the co-operative system, which is an urgent necessity in the Delta District, the poorest fisherman of every fishing village and hamlet, after gradual and systematic training will, in course of time, be able, not only to reap the full benefit of their labours, but also by mutual control and aid to develop into a more useful and contented peasantry. Fishery leases for three to five years, are now being granted instead of leases for only one year and fisherman obtaining the long-term leases have begun to realise the need of improving the fisheries by clearing the streams and pools of that Burma pest—the water hyacinth—and other weeds.

The members of a group live too far away from one another to watch one another and their co-operation aimed at by the system is not usually obtained. Another system known as the rent and premium system is under consideration and has actually been introduced in Maubin as an experimental measure. Under this system the lease is fixed at a fair rent and tenders called for and premia invited and the lease is giv[illegible] [illegible] [illegible] [illegible]. To work this successfully a good deal of information is required about the actual working of the fishery and it is to be hoped that the Fishery Settlement Enquiry which will probably be [illegible] being in 1928 will lead to improvement of the Fishery Revenue Administration and increase of Government's information about the fisheries.

The principal articles of manufacture are ngapi (fish-paste) and salt-fish: the manufacturing methods are primitive and with more industrial education and capital, these could be considerably improved.

The Punjab.

The Rules and Regulations under the Fisheries Acts are now applicable to the streams and rivers in 17 Districts and to all the Canals of the Province. Rules for some more Districts have been drafted and are under the consideration of Government. The steady increase in the number of Fishing licenses each year goes to show the popularity of the system of individual licenses. The Angler's Fishing Association in Rawalpindi proved of great help to the Department in the preservation of the fish supply of the Districts. Besides the Association, a Fishing Club open to Europeans as well as Indians was formed during the year. A greater number of cases of illegal fishing was brought to light. The Murrel breeding experiments ended in failure. No results have so far been achieved from the experiments in Carp breeding at Cheenawan in the Gujranwala District. A notable success has been achieved in the matter of Trout Culture in the Hills. The Beas in Kulu and the Uhl in Mandi are well stocked with trout and very good reports were received from Anglers who fished there. The Ravi in Chamba has also been reported to contain a good number of trout. Several fish were caught, two of which weighed 10 and 7 lbs. respectively. Trout were also planted in the Baspa River in Bashahr State and in the streams of Kangra proper with good result.

The levying of Hassayat tax on the fishermen has set back the success achieved by the Co-operative Societies, and hence there was no increase in their number. The two already started supplied some fish to the Hill Stations of Dharmsala and Dalhousie. The expenditure of the Departments rose to Rs. 70,200. This included the cost of construction of tanks and quarters and the Research work carried out. The latter though not a paying concern at the moment is expected to be ultimately of great benefit to the Department. Excluding these items the expenditure was Rs. 51,929 as against an income of Rs. 50,803.

Travancore.

This State has affiliated fisheries to the Department of Agriculture and with the help of two officers trained in Madras and another officer trained in Japan, the Department has already accomplished a notable amount of development work. Special attention has been given to the regulation of fisheries in backwaters to the establi[illegible] societies among the fis[illegible] to the introduction of [illegible] sardine oil and guano production. Useful work has been done by one of the officers in elucidating the [illegible] histories of the more valuable food fishes and prawns.

The Forests.

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the rapacity of mankind a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commencement, and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future importance of which it is hardly possible to overestimate.

Types of Forest.—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassed State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassed forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) on 31st March, 1924 was 228,850 square miles, or 20·8 of the total area. This was classed as follows; R 03 49 Pro ected 7 93 Unclassed State 4 0

Throughout this vast forest area, scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished:—

(1) Arid-country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kikar (*Acacia arabica*), which however in the driest regions exists only by the aid of river inundations.

(2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important comprising as they do the greater part of the teak and sal forests.

(3) Evergreen forests.—These occur in regions of very heavy rainfall, such as the west coast of the Peninsula, the eastern sub-Himalayan tract, and the moister parts of Burma and are characterized by the great variety and luxuriance of their vegetation.

(4) Hill forests.—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (*Pinus khasya*) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalaya the chief timber tree is the deodar (*Cedrus deodara*), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (*Pinus excelsa*), towards its upper limit the deodar merges into very large areas of spruce and silver fir while below it are found extensive forests of the long-needled pine (*Pinus longifolia*) which is tapped for resin.

(5) Littoral forests.—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (*Rhizophoreae*). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (*Heritiera fomes*).

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1904 by the classification of the areas under the control of the Department into four broad classes, namely:—

(*a*) Forests the preservation of which is essential on climatic or physical grounds These are usually si in hilly country the

n on o f g ou ... importance on account of its influence on the storage of the rainfall and on the prevention of erosions and sudden floods.

(c) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sal forests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(c) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term, but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector-General of Forests is the head of the Forest Department and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919, Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the Hon. Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the position can make out a convincing case against the transfer in its own province.

Territorial charges.—The various provinces are divided into one or more Forest Circles; each in charge of a Conservator of Forests; provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service; these Divisions in most [illegible] Each Division [illegible] in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non-territorial charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties.

The Forest Service.—The Forest Service comprises three branches:—

(1) The Indian (Imperial) Service with a sanctioned total personnel of 390 officers consisting of the Inspector-General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. Of these 353 are to be recruited direct to the service and the balance obtained by promotion from the Provincial Forest Service. The officers of this service are recruited as probationers;—

(a) by direct appointment in the United Kingdom and India; and

(b) by promotion from the Provincial Forest Service in India.

Recruitment in the United Kingdom and in India of candidates nominated for direct appointment is carried out under regulations laid down by the Secretary of State for India and the Government of India respectively. Candidates for direct appointment in the United Kingdom are required to have obtained a degree with honours in some branch of Natural Science in a University of England, Wales or Ireland, or have passed the final B.Sc. examination in Pure Science in one of the Universities of Scotland [illegible] idered as [illegible] s are re- [illegible] ave a fair [illegible] Weight is attached to the possession of a diploma or degree in Forestry.

Candidates for direct appointment in India are required to possess an Honours or a first class degree in Science or an M.Sc. degree of any class of a University incorporated by law in India.

Probationers are at present trained at a University possessing a forest school approved by the Secretary of State (Oxford, Cambridge and Edinburgh at present), this training being supplemented by a practical course, partly on the continent of Europe.

The process of Indianisation is steadily proceeding, as may be judged from the fact that out of a total of [illegible] lied in 1924, four were [illegible] two more Indians, [illegible], were appointed on probation. The strength of the directly recruited cadre is according to the latest official return 314, while 10 probationers are under control in Great Britain.

(2) **The Indian Forest Engineering Service.**—This service was created in 1919 and at present consists of 17 Forest Engineers.

(3) **The Provincial Service.**—Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Imperial Forest Service in 1920. Except for five unpromoted officers the class of Extra Deputy Conservators has been abolished and the service now consists of Extra Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments.

Officers of this service are eligible for promotion to 12½ per cent. of the posts in the Indian Forest Service, such promotion being made by local Governments. These officers are recruited and trained in India, their recruitment being a matter for the local Governments. A certain number of posts in this service are filled by the

[illegible] of sp[illegible] a[illegible] p[illegible] Ra[illegible] A[illegible] wo[illegible] are course of [illegible] [illegible] Dehra Dun [illegible] Governments [illegible] payment of prescribed fees to depute candidates to undergo that course provided they are qualified for admission under the rules governing the course.

(4) The Subordinate Service, consisting of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces and Madras), the Burma Forest School at Pyinmana (for Burma), and the Madras Forest College at Coimbatore (for Madras and the Central Provinces). These three institutions were established in 1878, 1898 and 1912 respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Eardley-Wilmot, then Inspector-General of Forests, of a Forest Research Institute at Dehra Dun. The Forest Research Institute, which is under the administrative control of the Inspector-General of Forests, is in the charge of a President. There are five main branches of research, namely Sylviculture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each branch being in charge of a research officer. In addition specialists are appointed temporarily when necessary and are attached to the Institute to carry out investigations in subjects of particular economic importance. Thus a paper pulp expert has been employed for some time to investigate possible new sources of paper-making materials of which the forests of India contain abundant supplies. Besides this, there are the Seasoning, the Timber Testing, and the Wood Preservation experts engaged temporarily on short term contracts. Indian Assistants have been appointed under them to receive the necessary technical training and experience in these subjects, with the object of eventually taking the place of experts if and when properly qualified.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired, on which new buildings are being built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this and the employment of specialists in Seasoning, Timber Testing and Wood Preservation steady progress is being made in the investigations which should ultimately lead to the fuller and better utilization of the raw products produced by Indian forests.

Forest Products.—[illegible] Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources during the quinquennium ended 31st March 1924, the latest date for which statistics are available, was [illegible],40,000 cubic feet against an average of 30,72,00,000 cubic feet per annum attained in the preceding quinquennium. The highest figure ever attained under this head occurred in 1921-22, when a total of 36,13,23,000 c.ft. was reached, the year 1923-24 coming next with 35,48,90,000 c.ft. The figures for 1921-22 and 1923-24 represent respectively 2·8 and 2·4 c.ft. per acre of all classes of forests. For reserved forests only the yield in 1923-24 was 3·7 c.ft. per acre as compared with 3·4 c.ft. per acre in 1918-19 the last year of the last preceding quinquennium. The year 1921-22 was marked by a phenomenal output of teak in Burma, viz., 600,000 tons (30,000,000 cubic feet), which was more than 74 per cent. above the average annual output of the preceding quinquennium. With this output of teak for the year the revenue in Burma soared to Rs. 2,21,18,768 and the surplus to Rs. 1,30,39,092. The total outturn for the five years amounted to 2,476,849 tons, an increase of 751,000 tons, or 44 per cent. over the output in the preceding quinquennium.

The figures for the last quinquennium show that in 1923-24 the ratio of timber extracted by Government agency to that removed by purchasers was 6 to 29 compared with a ratio of 5 to 27 in 1919-20. During the period the outturn removed by Government agency rose by 41 per cent. whilst that removed by purchasers increased by 15 per cent. Timber and fuel to the value of Rs 11,186 lakhs and minor products, including bamboos and grass, valued at Rs. 875 lakhs were removed by purchasers during the period. For the quinquennium 1918-19 the figures were Rs. 10,190 lakhs and Rs. 355 lakhs respectively.

Reviewing the figures of outturn, Government in a report issued in October 1925, says: "The results on the whole, considering the general trade depression, are most satisfactory and point to more intensive working of the forests and to better exploitation."

Forest Industries.—[illegible] role which [illegible] general commerce [illegible] employment for its population is not always fully recognized. Fifteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons while 3,000,000 persons, earning £30,000,000 a year, were employed in working up the raw material yielded by the forests. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an excessive scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers and

many o er s o ou.... The India . census shows over a million people and their dependents so employed in British India and nearly a further half million in Native States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discov products, a steady and extensive of industries dependent on the India may be confidently antici future.

Financial Results.—The stead forest revenue, expenditure and su the past 50 years is shown in t statement, which gives annual quinquennial periods:—

Financial Results of Forest Administration in British India from 1864-65 to 1923 of rupees).

Quinquennial period.	Gross revenue (average per annum).	(Expenditure average per annum).	Surplus (average per annum).
	Lakhs.	Lakhs.	Lakhs.
1864–65 to 1868–69	37·4	23·8	13·6
1869–70 to 1873–74	56·3	39·3	17·0
1874–75 to 1878–79	66·6	45·8	20·8
1879–80 to 1883–84	88·2	56·1	32·1
1884–85 to 1888–89	116·7	74·3	42·4
1889–90 to 1893–94	159·5	86·0	73·5
1894–95 to 1898–99	177·2	98·0	79·2
1899–1900 to 1903–04	196·6	112·7	83·9
1904–05 to 1908–09	257·0	141·0	116·0
1909–10 to 1913–14	295·0	162·7	132·3
1914–15 to 1918–19	371·3	211·1	160·2
1919–20 to 1923–24	551·7	367·1	184·6

The gross revenue and surplus were Rs. 466·2 lakhs and Rs. 179·4 lakhs in 1918-19 and Rs. 544·0 lakhs and Rs. 195·6 lakhs in 1923-24 respectively. The surplus rose from Rs 1,79,12,726 in 1918-19 to Rs. 2,19,12,510 in 1919-20, but during the next three years it steadily decreased, rising again to Rs. 1,84,60,547 during the last year of the quinquennium. The surplus in 1923-24 represents an average of 2·1 annas per acre of all classes of forest against 1·8 annas in 1918-19. The total surplus rose from Rs. 1,79,12,726 in 1918-19 to Rs 1,95,60,949 in 1923-24. Govern- [illegible] s, state: "Financially, [illegible] has had during the [illegible] a severe strain, even [illegible] ollowing on the short [illegible] trade. But development solely with a view to increase the resources and earning capacity of the forests has never been lost sight of. Judging by the perceptible improvement in the general financial results all round, it is confidently expected that the improvements initiated in this quinquennial period will produce much better results when the slump ends."

Prospects.—The past work of the Forest Department has already borne fruit, not only in a steady rise of revenue but also in the improved condition of the forests resulting from careful protection and [illegible] done in the way of o[illegible] regular exploitation; but there is still room for enormous development in this respect, for there are extensive areas of valuable forest as yet almost untouched, and these represent a vast capital locked up and not only lying idle but even deteriorating. Perhaps t pressing needs at present are the of improved sylvicultural systen extension of roads and other expc facilitate and cheapen extraction. must proceed simultaneously, sin inter-dependent, for it is obvious and other produce can be extracte economically if it is available in lar within a limited radius than if it in small quantities over large tracts indeed this question must often dec extraction is possible or not. teaches us how to effect this e and is therefore the bed-rock on w results, financial and otherwise, it is of little avail to seek and d markets for timbers and other prod cannot be produced in regular an quantities and extracted at a reaso

Forest Products: Exploita exploitation by the Forest Depart Commercial Department on busine the great timber forests which are most valuable natural assets of t continues to attract the special the various local Governments. for instance, the working of the Fores system, whereby the increased kn the difficulties of forest administra the villager obtains when he has a vo management is bringing home understanding of the necessity for th tration. A further important step regard to forest exploitation was ment of a Chief Forest Engineer an

[illegible] the work under way in the Government Timber Depot at Rangoon proves to be of great value to Government from the point of view of revenue and of considerable importance to the public from the point of view of industrial development. Research work on the seasoning of timbers has been started and results which promise to be of great value have already been obtained. Experimental work on the manufacture of furniture and in other similar directions are expected to give a value to a number of different timbers which are at present more or less unknown. The Myitmaka River Training Works started in 1905, which have since then been continued for the sale of Government teak timber, are of more than departmental interest. These works have also proved of great value to local people inasmuch as they have led to the reclamation of a very considerable amount of land which was previously too low lying and swampy to be fit for cultivation. In the United Provinces, the institution of the Government Sawmill and Turnery, the Government Central Wood Working Institute and the Resin Distillery have led to important results These, and many other examples which could be quoted, go to show that local Governments are fully alive to the importance of exploiting their forest resources to the fullest possible extent for the benefit of the country.

Agencies.—An agency has been established in India by the Government of India for the sale of Government timber and it is at present held by Messrs. Martin & Co., Calcutta. The Government of India have also appointed Messrs. W. W Howard Bros., London, as their agents in England for the sale of Indian timbers. Local Governments, and the Andamans especially make full use of these two agencies for the sale of their woods and the London agency has in addition been the direct means of bringing to the notice of outside countries the immense possibilities of India's wealth in this direction

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the Superintendent, Government Printing, India, Calcutta.

PAPER MAKING.

There are five large paper mills in the country working on up-to-date Western lines, *viz.*, at Titagarh, Kankinara and Raniganj in Bengal, the Upper India Couper Mills at Lucknow and the Reay Mill at Poona. There are also two smaller mills at Bombay and Surat which make only country paper, and there are one or two other mills which recently were not working. The five large mills have a large Government connection, as the greater part of Government orders for paper is placed in India.

During the past year an interesting experimental paper-making plant has been installed at the Government of India Forest Research Institute at Dehra Dun. Specially designed to incorporate a new system patented by Mr. Raitt, Cellulose Expert to the Government of India, the object of this plant is to test the various paper-making fibres which are available over vast forest and hill areas in India and Burma, and thus encourage the establishment of pulp and paper mills on a commercial scale.

After many delays the Carnatic Paper Mills Company commenced operations at Rajahmundry, on the Godavari river, during the year, and it is estimated that the daily output will be ten tons of pulp and five tons of paper made from bamboos and paddy straw. In Southern India the Sri Minakshi Paper Mills, established many years ago as a small concern in Travancore State, appears to have taken a new lease of life and has ordered a new plant capable of turning out fifteen tons of paper per day, whilst in Assam a new company has been formed and is said to be waiting for the arrival of its plant. [illegible] plant for manufacturing [illegible] mboos has commenced [illegible] company has obtained a comprehensive concession for Bhablar grass in the Punjab and is erecting a factory near the headworks of the Western Jumna Canal, about 200 miles from Lahore.

The possibility of utilising the dense growths of bamboo in the hinterland of Cuttack has again been under consideration during the year, and the project has been investigated afresh by Mr. Raitt on behalf of the Government of Bihar and Orissa. Mr. Raitt estimates that in this area alone there is sufficient raw material for an output of 10,000 tons of paper pulp per annum.

Raw Materials.—The existence of the local industry depends chiefly on the supply of Sabai grass which on account of unfavourable seasons sometimes yields short crops. It is of great importance, therefore, to look for materials according a constant outturn, and various reports have been published on the available paper-making materials. Considerable attention has been devoted to **Bamboo**, since 1875 when it was found that this plant—of which there are four chief varieties in India—yielded a fibrous paper stock which made a quality of paper superior to esparto grass and at a considerably less cost. It was at that time estimated that one acre of bamboo would yield 10 tons of dried stems equivalent to 6 tons of merchantable cellulose. In 1905 Mr. R. W. Sindall was invited by Government to visit Burma with a view of enquiring into the possibility of manufacturing paper pulp. His report on the subject appeared in March 1906. He made numerous experiments with bamboo and woods of Burma and laid down lines along which further enquiry should be made. Subsequently Mr. W. Raitt, a pulp expert, was engaged at the Forest Research Institute in conducting tests on the treatment of bamboos by the soda and sulphate processes, the treatment of bamboo before

[illegible] Production of Paper pulp [illegible] in 191[illegible] Mr. R. S. [illegible] Pearson of the Forest Service, Dehra Dun, as the outcome of enquiries made throughout India published in 1912 a note on the Utilization of Bamboo for the manufacture of Paper-pulp. The yield per acre from bamboo is larger than that of grasses usually used for paper. The cost of working into pulp has been estimated to yield a product cheaper than imported unbleached spruce sulphite and unbleached sabai grass pulp. In 1915 Mr. Dhruva Sumanas published a pamphlet, Dendrocalamus Strictus Bamboo of the Dangs, as the result of investigations carried on in Bansda State.

In a paper read before the Royal Society of Arts in 1921 Mr. Raitt gave an answer to the question: "**What India can do** to fill the gap in the world's *shortage of paper?*" He said that he thought it was "a moderate estimate to say that from bamboo, taking only that which is available under 'possible' manufacturing conditions, Burma, Bengal and South West India could produce ten million tons of pulp per annum, and Assam from Savannah grasses three million. India could therefore produce pulp for the whole world."

The leading Indian **paper grass** for the last thirty years has been the bhaib, bhabar, [illegible] and [illegible] grass of [illegible] and [illegible] and [illegible] The Calcutta mills draw their supplies from Sahibganj, Chora Nagpur and the Nepal Terai. The quantity annually exported from Sahibganj is between three to four lakhs of maunds. The cutting in these districts is said to commence in October when the plants are six or seven feet high. Sabai grass yields from 36·6 to 45·7 per cent. of bleached cellulose. A report by Mr R. S. Pearson, Forest Economist, Dehra Dun on the use of **elephant grasses** in Assam was issued in 1919. The most important species of grass found in the areas in which investigation has been made are Khagra (*Saccharum spontaneum*) and Batta (*Saccharum narenga*), with patches of Nal (*Phragmites karka*) on the more swampy ground. Hand samples of the above grasses were sent to England to be tested on a laboratory scale, while several tons were sent to an Indian paper mill to be made into paper. The results were satisfactory and proved that a very fair quality of paper can be produced from these grasses at a relatively low price. Small samples of such paper can be obtained by persons interested in these grasses from the Forest Economist, Forest Research Institute, Dehra Dun, who can also supply further details.

Indian paper manufacture is protected by special provisions in the import tariff.

WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the Cable companies.

For reasons of economy, most of the inland wireless stations in India have been practically closed down and placed in charge of "Care and Maintenance" parties which carry out tests twice a month, the exceptions being Peshawar Radio, which maintains official communication with Kabul in Afghanistan and Kashgar in China, and Jutogh Radio which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Reuter's Agency for distribution to subscribing newspapers.

The coast stations, however, have been maintained in a state of high efficiency and many improvements effected. The application of the Baudot system to the high speed continuous-wave wireless stations at Madras Fort and Mingaladon (Rangoon) has proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route *via* Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather, but the difficulties have been largely overcome by handspeed working during the worst periods.

For many years the Bombay stations known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and now total about 20,000 per annum. Official telegrams are exchanged with the British Naval station at Matara (Ceylon) *via* Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula *via* Rangoon and Penang and between Burma and Sumatra, whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

... ... of the Port Trusts at Bombay and Rangoon.

Safety at Sea.—A noticeable feature of wireless development during the past two years has been the provision of direction-finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea.

Broadcasting.—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power, the broadcasts were tuned-in over practically the whole of India. The clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus, without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations have each an aerial input of three kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes are so arranged that both Indian and European music are broadcast daily and the news bulletins and market and weather reports are read in two languages.

Bombay broadcasts normally on a wavelength of 357 metres, and Calcutta on 370 metres. Reception in either of these cities, and for a distance of twenty or thirty miles around, is possible on crystal sets, of which a very large number have been sold. Valve sets are necessary for those living further afield, but although there has been a considerable demand for these, the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries, which is no inconsiderable item when sets containing five or six valves are employed and it is partly with a ... ... problem and to render ... ... two-valve sets in any ... Broadcasting Company ... possibility of transmitting simultaneously no long and short waves.

Reports of the reception of foreign short-waves stations have been received from all parts of the country, and upon several occasions the Bombay ... ... relayed the programmes from the Dutch station PCJJ., but the results have not been entirely satisfactory.

Just as we go to press with this edition of th Year Book, the Indian Broadcasting Compan has sprung a bombshell on the public by announ ing that its revenue from license fees is insuffi cient to meet expenses and hinting that there are in the country a very large number of people who come within the radio category of "pirates" i.e., those who have neglected, wilfully or otherwise to purchase the license from which the Company derives the major portion of its income. The matter is now under discussion with the Government of India.

In addition to the Radio Clubs mentioned earlier, new ones have been formed recently at Lahore and Bhusaval, besides an Indian Radio Society with headquarters in Bombay.

Licenses.—Broadcast receiving licenses are issued at Head Post Offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Up till the end of October 1927, 1962 such licenses had been issued, 1,103 of them in Bombay. It is believed, however, that the number has since increased very substantially. Licenses for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants, more than 300 have been issued. The number of traders in wireless apparatus who are required to take out special Import licenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting (q. v.)

Prospects.—The Government of India has always encouraged the development of wireless in India by private enterprise and it is to this source that India must look in the immediate future for internal radio communication. There are two most promising lines of development, viz. :—

(a) Erection of small sets either for speech or morse in districts where no land lines exist, and to link such districts with the existing landlines ... ... emarked that mo... ... ... of using either m... ... used for speech can be operated by the ordinary desk telephone instrument in daily use all over India.

(b) The use of radio as a substitute for land-line to form the trunk telephone route between two cities which already have telephone facilities.

These will open up a new industry which if properly fostered would very soon extend its sales outside the limits of India. There is no doubt that the majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and further such an industry would find the right kind of skilled labour already in India.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkaru*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stocqueler in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Silk Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette*, founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the [illegible] to the rise of the [illegible] first newspaper [illegible] the *Samachar Durpan* [illegible] Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

Mutiny [illegible] had [illegible] the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in [illegible] circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Harris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW.

Before 1835 all printing of books and papers was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication; (ii) control over publishers of newspapers; (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation.—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Governments, a Committee [illegible] after a debate [illegible] examine the [illegible] Act, 1867, and [illegible] report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending:—

(1) The Press Act should be repealed.

(2) The Newspapers Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below: (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities; (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act; (c) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts; (e) any person challenging the orders of Government should do so in the local High Court; (f) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months; (g) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendation during the year 1922.

Newspapers and News Agencies registered under the Press Rules and arranged alphabetically according to Station where they are published and situated.

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks:—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. Put very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless [illegible] of title to them were deposited [illegible] at the same time [illegible] interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

The system continued with only minor modifications until [illegible]. During the war however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and making much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank.—Under the Imperial Bank of India Act (XLVII of 1920), the control of the Bank is entrusted to a Central Board of Governors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board, with the previous sanction of the Governor-General in Council may determine. The Central Board of Governors consists of—

- (a) Managing Governors not exceeding two in number, appointed by the Governor-General in Council on recommendation by the Central Board;
- (b) the Presidents, Vice-Presidents and Secretaries of the Local Boards;
- (c) the Controller of the Currency, or other officer nominated by the Governor-General in Council; and
- (d) not more than four non-officials, nominated by the Governor-General in Council.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Controller of the Currency and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not to vote under the agreement with Government. The Governor-General in Council is entitled to issue instructions to the Bank in respect of any matter which in his opinion vitally affects his financial policy or the safety of the Government balances, and if the Controller of the Currency or such other officer of Government as may be nominated by the Governor-General in Council to be a Governor of the Central Board shall give notice in writing to the Managing Governors that he considers that any action proposed to be taken by the Bank will be detrimental to the Government as affecting the matters aforesaid, such action shall not be taken without the approval in writing of the Governor-General in Council. Under the Imperial Bank of India Act provision was made for the increase of the capital of the Bank. The capital of the three Presidency Banks consisted of 3¾ crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11¼ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the bank is Rs. 5,07,50,000 and the Balance Sheet of 30th June 1927 showed the Government Balances at Rs. 10,04,43,927, other deposits at Rs. 72,17,24,712 and cash Rs. 22,83,65,964 with a percentage of cash to liabilities of 27·317

Class of Business. The Imperial Bank of India Act follows the Presidency Banks Act of 1876 in defining absolutely the class of business in which the Bank may engage, though the older limitations are modified in some minor points. It permits for the first time the constitution of a London Office and the borrowing of money in *England for the purpose of the Bank's business* upon the security of assets of the Bank, but not the opening of cash credits, keeping cash accounts or receiving deposits in London except *from former customers of the Presidency Banks.* The Act provides for an agreement between the Bank and the Secretary of State, and this agreement, which was signed on the 27th January 1921 and is for a period of ten years *determinable* thereafter by either party with one year's notice, provides, *inter alia*, for the following important matters:—

(1) All the general banking business of the Government of India is to be *carried out* by the Imperial Bank.

(2) The Bank will hold all the Treasury Balances at Headquarters and at its *branches.* This involves the abolition of the Reserve Treasury system.

(3) Within *five years* the Bank undertakes to open 100 new branches of which the Government of India may determine the location of one in four. The branches and agencies *of* the three Presidency Banks prior to the date of [illegible] ed 69, inclu[illegible] of the Ban[illegible] *of* Bengal had no *branches* prior to the proposal to transfer Government business to the Bank in 1861-62 but no less than 18 branches were *established before* 1868.

(4) The management of the Public Debt will continue to be conducted by the Bank *for specified* remuneration

In Schedule 1, Part 1, of the Act, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are :—

(1) Advancing money upon the security of :—
- (a) Stocks, &c., in which a trustee is authorised by Act to invest trust monies.
- (b) Securities issued by State aided Railways, notified by the Governor-General-in-Council.
- (c) Debentures, or other securities issued under Act, by, or on behalf of, a District Board.
- (d) Goods, or documents of title thereto, deposited with, or assigned to the Bank.
- (e) Accepted Bills of Exchange or Pro. Notes.
- (f) Fully paid shares and debentures of Companies with limited liability or immoveable property or documents of title relating thereto, as collateral security where the original security is one of those specified in a, b, c, d and, if authorised by the Central Board, in e.

(2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge.

(3) Drawing, accepting, discounting, buying and selling bills of exchange and other negotiable securities payable in India and Ceylon and, subject to the directions of the Governor-General in Council, the discounting, buying and selling of bills of exchange payable outside India for and from or to such Banks as may be approved.

(4) Investing the Banks' funds in the securities referred to in (1) a, b, c.

(5) Making Bank Post Bills and Letters of Credit payable in India and Ceylon.

(6) Buying and selling gold and silver.

(7) Receiving deposits.

(8) Receiving securities for safe custody.

(9) Selling such properties as may come into the Bank's possession in satisfaction of claims.

(10) Transacting agency business on commission.

(11) Acting as Administrator, for winding up estates.

(12) Drawing bills of exchange and granting letters of credit payable out of India for the use of principles in connection with (11) and also for private constituents for bona fide personal needs.

Bu ing o p irpo e of me n su h s & b ll of x hang p b e out of India at any u-ance not exceeding six months.

(14) Borrowing money in India.

(15) Borrowing money in England upon security of assets of the Bank, but not otherwise.

The principal restrictions placed on the business of the Bank in Part 2 are as follows :—

(1) It shall not make any loan or advance :—

(a) For a longer period than six months;
(b) upon the security of stock or shares of the Bank.

s e n .a o Part 1 (Courts of gage or security perty or document

(2) The amount which any individual or partner

(3) Discounts cannot b on personal security give counts or advances carry responsibilities of at leas unconnected with each ot nership.

The Balance Sheet of the Bank as at 30th June 1927 was as follows :—

Liabilities.	Rs. a. p.	Assets.
Subscribed Capital ..	11,25,00,000 0 0	Government Securities .
		Other authorised Securities under the Act ..
Capital paid up.. ..	5,62,50,000 0 0	Loans .. .. ..
Reserve	5,07,50,000 0 0	Cash Credits .. ..
Public Deposits.. ..	10,04,43,927 4 2	Inland Bills discounted
Other Deposits	73,17,21,712 9 8	[illegible]
Loans against Securities per contra	....	[illegible]
Loans from the Government of India under Section 20 of the Paper Currency Act, against Inland Bills discounted and purchased per contra ..	....	Bullion .. .. ..
		Dead Stock .. ..
		Liability of Constituents for Contingent Liabilities per contra ..
		Sundries .. .. ..
Contingent Liabilities ..	....	Balances with other Banks .. .. ..
Sundries	33,05,470 14 5	
		Cash .. .. ..
Rupees ..	94,29,74,110 14 2	Rupees ..

The above Balance Sheet includes.—
Deposits in London £ 950,366-1-3; Advances in London £ 1,941,31
Balances at other Banks in London £ 46,058-6-0.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally [illegible] the bills at matu[illegible] branches with [illegible] standing of [illegible] is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1925 of the undernoted Banks will give some idea of this.

LIABILITY ON BILLS OF EXCHANGE RE-DISCOUNTED AND STILL CURRENT

Bank	£
Chartered Bank of India, Australia and China.	4,017 000
Eastern Bank, Ld.	452,000
Hongkong and Shanghai Banking Corporation.	9,231,000
Mercantile Bank of India, Ld. ..	2,735,000
National Bank of India, Ld... ..	5,578,000
P. & O. Banking Corporation, Ld. .	11,074,000
	35,250,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

(1) Proceeds of import bills as they mature.

(2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.

(3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.

(4) Imports of bar gold and silver bullion.

(5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

An interesting event in Indian Banking history is the recent entry in the Banking field here of one of the English "Big Five." This has been brought about by the acquisition of the business of Cox & Co., by Lloyds Bank.

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since these events of ten years ago confidence has been largely restored. But in April 1923 the Alliance Bank of Simla suspended payment and is now in voluntary liquidation. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets :—

In Lakhs of Rupees.

P. & O. Banking Corporation ..	London Office	117-122, Leadenhall Street, E. C. 3.
Sumitomo Bank	Ditto	67, Bishopsgate, E.C. 2.
Thomas Cook & Son	Ditto	Ludgate Circus, E. C. 4.
Yokohama Specie Bank	Ditto	7, Bishopsgate, E. C. 2.

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, *viz*, (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or $1\frac{1}{2}$ % is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikanir and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate, but this does not always apply and in the monsoon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less

The following statement shows the average Bank Rate since the Imperial Bank was constituted:—

Year.	1st Half-year.	2nd Half-year.	Yearly average
1921	6·038	5·108	5·573
1922	7·132	4·510	5·821

1925	6·585	4·701	5 643
1926	5·651	....	..
1927	6·508	4·	4·825

BANKERS CLEARING HOLSES

C ean H use n l d ae a d o
a B mba M d a, Rangoon, Karachi, and of these the first r the most important. The ie places consist of the Imperial he Exchange Banks and English firms, and a few of the better al Joint Stock Banks. No Bank aim to be a member as of right tion for admission to a Clearing d and seconded by two members thereafter to ballot by the ex-

f settling Bank are undertaken l Bank at each of the places a representative of each member ffice of that Bank on each busi- time fixed to deliver all cheques negotiated on other members

... L exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

for the Clearing Houses in India above referred to are given below:—

Total amount of Cheques Cleared Annually.

In lakhs of Rupees.

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (33 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, now the Oudh and Rohilkund State Railway. (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22*d*. to the rupee, the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions; the result was that by 1869 the deficit on the Railway budget was Rs. 166½ lakhs. g for ntical of com the Go

secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87) the Southern Maratha (1882); and the Assam Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870 4,255 miles were opened, of which all save 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantej, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebates being found unattractive in view of the com of 4 per cent. trustee stocks they were in 1896 to provide for an

absolute guarantee of 3 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Government in Madras, Punjab, Burma and Bombay.

Railway Profits Commence.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both and goods. The falling in of the contracts allowed Government to renew them on more favour[able] terms. The development of irrigation in [the] Punjab and Sind transformed the North-W[est]ern State Railway. Owing to the burden [of] maintaining the unprofitable Frontier li[nes] this was the Cinderella Railway in India— [the] scapegoat of the critics who protested aga[inst] the unwisdom of constructing railways f[rom] borrowed capital. But with the complet[ion] of the Chenab and Jhelum Canals, the Nor[th] Western became one of the great grain [lines] of the world, choked with traffic at cert[ain] seasons of the year and making a large pr[ofit] for the State. In 1900 the railways for [the] first time showed a small gain to the St[ate]. In succeeding years the net receipts g[rew] rapidly. In the four years ended 1907 they averaged close upon £2 millions a y[ear]. In the following year there was a relapse. [Bad] harvests in India, accompanied by the mo[ne]tary panic caused by the American finan[cial] crisis, led to a great falling off in receipts [at a time] when working expenses were rising, ow[ing] to the general increase in prices. Instead [of a] profit, there was a deficit of £1,240,000 in [the] railway accounts for 1908-09. But in [the] following year there was a reversion to a p[ro]fit, and the net Railway gain has steadily [in]creased. For the year ended March 1919 [the] gain amounted to £10,573,000. Although i[n a] country like India, where the finances [are] mainly dependent upon the character of [the] monsoon, the railway revenue must fluctua[te,] there was no reason to anticipate a furt[her] deficit, but the net railway gain decreased [to] £3,767,000 in 1920-21 and there was an actu[al] loss of £6,182,000 in 1921-22. As a result [of] the steps taken by the Railway Board, ho[w]ever, on the report of the Acworth Commit[tee] in 1921, this loss was changed into a gain [of] £813,000 in 1922-23 and this was furt[her] increased to a gain of £ 4,275,000 in 1923-[24,] of £ 8,579,800 in 1924-25 and of £ 5,796 000 [in] 1925-26. Thanks to the separation of the Ra[il]way from the General Finances which [is] described later, and provided that the pre[sent] railway policy is not influenced too much [by] political considerations, railways should contin[ue] to show a net yearly gain.

Contracts Revised.

One factor which helped to improve [the] financial position was the revision of the origi[nal] contracts under which the guaranteed lines w[ere] constructed. The five per cent. divide[nds] guaranteed at 22*d.* per rupee, and the h[alf]-yearly settlements made these compan[ies] a drain on the State at a time when their st[ock] was at a high premium. The first contr[act] to fall in was the East Indian, the great l[ine] connecting Calcutta with Delhi and the Nor[th]ern provinces. When the contract lapse[d] the Government exercised their right of p[ur]chasing the line, paying the purchase-mon[ey] in the form of terminable annuities, deriv[ed] from revenue, carrying with them a sink[ing] fund for the redemption of capital. The r[ail]way thus became a State line; but it was [re]leased to the Company which actually wo[rked] it. Under these new conditions the E[ast] Indian Company brought to the State in [the] ten years ended 1909 after meeting all charg[es] the payments on t of le annuity by of which

purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad gauge route from Bombay to Sind is needed, but chiefly for strategic purposes. The poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories, keep this scheme in the background. There does not exist any through rail connection between India and Burma, although several routes have been surveyed; the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre-gauge systems of Northern and Southern India must also be connected and Karachi given direct broad-gauge connection with Delhi, a project that is now under investigation. But these works are subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape. to consider ways and means. This Committee found that the [illegible] t which could be [illegible] spent on railway con [illegible] in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

Government Control and re-organisation of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905 The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Two minor changes have taken place since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sits in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board [illegible] The [illegible] of the most [illegible] was [illegible] fully [illegible] by the A[illegible] in [1]921

and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to the Railway Administration report for 1922-23. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of —

(a) the directly controlling authority of the three State-worked systems aggregating 15,414 miles in 1925.

(b) the representative of the predominant owning partner in systems aggregating 27,325 miles,

(c) the guarantor of many of the smaller companies, and

(d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The statement of the varied responsibilities of the Government of India in regard to railways might be extended almost indefinitely. It will perhaps be sufficient to mention only the complications that may and do arise owing to the very considerable railway mileage in Indian States. In the exercise of all these functions the Railway Department is a Department of the Government of India, its policy must be in accord with the policy of the Government as a whole and every decision must be made with that consideration in mind. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who expressed the unanimous opinion that material changes were necessary in the constitution of the Railway Board. Amongst their recommendations they advised the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Gove[illegible] t of India on matters of railway policy and is not as was the [illegible] subject to be [illegible] and over-ruled by his [illegible] as the the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1-4-1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil E[illegible] questions it [illegible] assistance. [illegible] ment have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief of the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past. This object was effected by placing a responsible Director at the head of each of the main branches of the Board's work, namely Civil Engineering, Mechanical Engineering, Traffic and Establishment. The former Chief Engineer and the Chief Mechanical Engineer, who had been employed mainly in cultivative work, became Directors and together with the Directors of Traffic and Establishment have been made responsible for the direct disposal of the work of their branches under the general orders of the Railway Board

The posts of Joint Secretary and 4 Assistant Secretaries were replaced by 6 Deputy Directors working under the Directors and in charge of branches dealing with Establishment, Works Projects, Stores, Statistics and Traffic. One Assistant Director was also added to supervise the Technical Branch and the Drawing Office The disposal of the general work of the Railway Board was provided for by the continuance of the post of Secretary in whose name all letters and orders of the Board are issued The position of the Board as a Department of the Government of India has been maintained and it works under the Member for Commerce and Railway. As already stated the Chief Commissioner is the Secretary to the Government of India in the Railway Department and orders issued by the Board over the signature of the Secretary are orders of the Government of India.

Experience of the working of this organization during 1924-25 and the decision agreed to by the Legislative Assembly in September 1924 to separate railway finances from the general finances of the country made it necessary to appoint a Deputy Director and an Assitant Director of Finance. An Assistant Director of Statistics was also added during that year. Later a Director of Finance was [illegible] to the estab[illegible] t occupying, as [illegible] of work, the same [illegible] to above.

Further experience of the reduction of work resulting from the large delegation of powers and responsibility to the Agents of State-managed Railways and the Board of Directors of Company-managed railways enabled a re-arrangement of work to be made during 1925-26 accompanied by a reduction in the staff. Under this rearrangement the posts of 3 Deputy Directors, an Assistant Director and the Assistant Secretary were held in abeyance. The personal work was transferred from the Directors of Establishment to the Secretary and a temporary post of Deputy Secretary was created. Further a separate technical office was established to take charge of the technical work of the engineering branches. The Technical Officer also acts as *ex-officio* Secretary to the permanent Standardization Committees which have been appointed to deal progressively with all questions of standards of equipment.

The present superior staff under the Railway Board, therefore, consists of 5 Directors, 4 Deputy Directors, a Technical Officer, 2 Assistant Directors, a Secretary and a Deputy Secretary.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board has been under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start has been made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff has been appointed reporting directly to the Auditor-General. If the revised procedure proves a success, it will probably be extended to other State Railways.

Management.

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. The Company managed railways are generally organised on a departmental basis with a Traffic Manager, Chief Engineer, Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while the State managed lines have generally [illegible] with a Chief [illegible] Commericial [illegible] Mechinical Engineer, Controller of Stores and Chief Auditor.

Clearing Accounts Office.

On the results of an experiment carried out in 1925 on the North Western Railway with the object of demonstrating that grouped divisions of traffic could be effected on the basis of ton mileage carried on each railway under particular commodities of Particular rates. Railway Board de[illegible] should be [illegible] a Central [illegible] traffic bet[illegible] such traf[illegible] was placed [illegible] 1925, who in the course of his investigations discovered a new method of much greater simplicity for apportioning the traffic.

The working of the new method has been fully [illegible] and G[illegible] are co[illegible] hopeful that the establishment of a Central Office for the check and apportionment of traffic under the revised method will make for increased efficiency and economy.

The Clearing Accounts Office will undertake the internal check of the returns from stations of State-worked Railways in respect of all through traffic of such railway. It will, in addition undertake the apportionment of all traffic interchanged between State-worked Railways. This apportionment will be done under the revised method. It will also be responsible for the apportionment of all traffic interchanged with the Company-worked Railways which under the existing procedure, the State-worked Railways are responsible to clear. All such work will for the present be performed under existing methods in order that the Company-worked Railways may receive the same returns as they do at present. From enquiries that have been made it is hoped however, that some at least of the Companies will desire to receive returns in the modified forms with the traffic apportioned under the new method.

The question of extending the functions of the Clearing Accounts Office to include the preparation of certain classes of statistics and the adjustments of certain calsses of expenditure is also under consideration.

The present cost of the work transferred to the Clearing Accounts Office compared with the cost of performing the same work in the latter office shows that a substantial saving in expenditure will be secured immediately. As Company worked Railways agree to accept the application of the new method of apportionment of traffic the saving will increase.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and it has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3⅜ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the [illegible] lines than to convert them to the broad [illegible] So excep[illegible] in the Indus Valley where the [illegible]

an unbroken gauge, the metre gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar. Another System in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godaveri Railway, cannot be long delayed. All the Burma lines are on the metre-gauge. Since the opening of the Barsi line, illustrating the capacity of the two feet six inch gauge, there has been developed a tendency to construct feeders on this rather than on the metre-gauge.

The following statement brings out the more important features of the operation of Indian railways during the year 1926-27 together with similar information for the year 1925-26:—

		1925-26.	1926-27.
Mileage open on the 31st March—			
1. Single line		35,186·73	35,542·41
2. Double line or more		3,392·75	3,506·47
3. Total route mileage		38,579·48	39,048·88
4. Total track mileage		52,079·13	52,886·27
Capital and Revenue Earnings and Expenditure—			
5. Total capital at charge including ferries and suspense on open line	Rs.	7,54,31,52,000	7,88,66,66,000
6. Gross earnings	"	1,13,39,21,000	1,12,35,66,000
7 Gross earnings per train mile	"	6·99	6·58
8. Working expenses	"	71,09,05,000	69,70,08,000
9. Working expenses per train mile	"	4·38	4·08
10. Net earnings	"	42,30,16,000	42,65,58,000
11. Percentage of working expenses to gross earnings.		62·69	52·04
12. Percentage of net earnings on total capital outlay.		5·61	5·41
Equipment—			
13. Locomotives		10,011	9,873
14. Passenger carriages		20,449	20,590
15. Other passenger vehicles		5,556	5,879
16. Goods stock		226,766	2,30,726
Passenger Traffic—			
17. Number of passengers carried		599,144,800	6 04,371,800
18. Passenger miles		20,331,752,000	20,366,250,000
19. Average journey	Miles.	33·9	33·7
20. Earnings from passengers carried	Rs.	39,45,09,000	38,11,89,000
21. Average rate charged per passenger per mile	Pies.	3·73	3 59
22. Total coaching earnings	Rs.	45,81,86,000	44,48,35,000

Number of employees		751,603	762,553

At the close of the year 1926-27, the total capital invested in railways was Rupees 7,88,66,66,000 represented by a property which in terms of route mileage amounted to 39,049 miles of railway. This property brought in to the owners a return of 5·41 per cent. on the capital at charge. Similar figures for the railways owned by the State are :—

	Rs.
Total capital at charge	6 96,5[illegible],000
Total route mileage	[illegible]8 004
Return on capital outlay	5·20

In 1925-26 there was a falling off of Rs. 3,88,84,000 in the net gain from the working of State-owned Railways due principally to a decline in earnings of Rs. 1,34,56,000, an increase of Rs. 1,51,18,000 in working expenses and to enhanced interest charges of Rs. 90,97,000.

State versus Company Management.—The relative advantages and disadvantages of State and Company [illegible] t of the railways owned by [illegible] ent which the great bulk of the railway mileage in India have

been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was, unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company management. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsula Railway followed suit. The Naini-Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances has been under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent. on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A was introduced n the bly on the 3rd 924 to the in Council

"that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year *plus* one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in

(*a*) forming reserves for.

(*i*) equalising dividends, that is to say," or securing the payment of the percentage contribution to the general revenues in lean years,

(*ii*) depreciation,

(*iii*) writing down and writing off capital

(*b*) the improvement of services rendered to the public,

(*c*) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be prescribed by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement The proposed expenditure will, as at present be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, *i.e.*, will not have the effect of increasing the fixed contribution for the year

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on date prior to the date fo the of the d for grants for

When nt du ng h eH n b ember for Commerce stated that it had been represented to him that there was a general eling in the House that before the House was ked to commit itself to those proposals, it hould be allowed to refer them to a committee f the House. He further stated that he had o objection to this course provided that the ommittee met rapidly. This was agreed to nd members were appointed.

The committee met twice and considered the esolution but was not able within the time allowd to satisfy itself fully as to the effect of the roposals in the resolution on the control of he Assembly over railway finance and policy nd as to the amount and form of contribution be paid by the railways to general revenues. n the circumstances, the committee recommendd that the consideration of the resolution be djourned till the autumn session to allow the ommittee further time for examination. Government raised no objection to this proposal and was agreed to by the Assembly.

The resolution was further examined by the tanding Finance Committee in September nd as a result of the views expressed by the ommittee and in the Assembly certain modications were introduced. The final resolution greed to by the Assembly on September 20th, 924, and accepted by Government differed from he original resolution in that the yearly conibution had been placed at 1 per cent. instead f 5/6th per cent. on the capital at charge and if he surplus remaining after this payment to eneral Revenues should exceed 3 crores, only rd of the excess over 3 crores were to be transrred to the Railway Reserve and the remaining rd was to accrue to General Revenues. At he same time a Standing Finance Committee or Railways was to be constituted to examine he estimate of railways expenditure and the emand for grants, the programme revenue xpenditure being shown under a depreciation und. This committee was to consist of one ominated official member of the Legislative ssembly as Chairman and 11 members elected y the Legislative Assembly from that body. his would be in addition to the Central Advisory Council which will include the Members of he Standing Finance Committee and certain ther official and non-official members from the egislative Assembly and Council of State. hese arrangements were to be subject to peridic revision but to be provisionally tried for t least 3 years. They would, however, only old good as long as the E. I. Railway and the I P. Railway and existing State Managed ailways remain under State management and any contract for the transfer of any of the bove to Company management was concluded gainst the advice of the Assembly, the Assembly ould be at liberty to terminate the arrangeents in this resolution.

The Assembly in an addendum recommended hat the railway services and the Railway Board hould be rapidly Indianised and that the stores or the State Managed Railways should be purhased through the organisation of the Indian tores Department.

Re-organ n problems. The growing omplexity of railway n in India nd the evolution of new of com t years, h ffic ha e g ven a st mu s to the effo ts of various railways to revise their organisations The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23 and entailed :—

(a) the separation of the commercial and operative duties of the Traffic Department,

(b) the separation of the mechanical and running duties of the Locomotive Department,

(c) the fusion of the operative duties of the Traffic Department with the running duties of the Locomotive Department.

Under the new organisation there is now—

(1) a Chief Transportation Superintendent in charge of all operating functions,

(2) a Chief Traffic Manager in charge of the commercial side of the railway,

(3) a Chief Mechanical Engineer in charge of the design and construction of rolling stock and of all repairs and renewals of rolling stock carried out in the central workshops.

This organisation is more or less similar to the divisional organisation found on most American Railways with the exception that the Engineering Department still works on a departmental basis. This, however, is being changed and the [illegible] Works is being brought [illegible] sation while new con- [illegible] outside.

A somewhat similar organisation was introduced on the North-Western Railway from 1st October 1924, except that it follows rather the organisation in force on the South African Railways where the railways are divided into a number of areas or divisions each under one chief officer and all reporting to the General Manager who is assisted by a number of principal officers in charge of definite phases of the working. A similar organisation was also introduced on the East Indian and Oudh and Rohilkhand Railways early in 1925.

Revision of Railway statistics.—A Committee consisting of one officer from the Traffic Department and one from the Audit Department of the North Western Railway was appointed in October 1922 to suggest alterations in the existing administrative statistics furnished by railways to the Railway Board and to bring them into line with present up-to-date practice. For many years after the first railways were opened, such statistics as were produced were primarily directed towards showing the return on capital invested, although commodity statistics were also prepared to some extent for trade purposes. It was only when comparisons between different railway systems came to be a matter of interest that statistics of actual working were found to be necessary and even then the tabulation and examination of these figures were directed primarily towards ascertaining the ultimate cost of transportation as a marketable odity The int of scientific of railway working in has shown that properly

prepared statistics form a most valuable portion of the machinery whereby the railway management is able to improve efficiency in the details of working and effect economies in working costs.

The existing statistics are based on the report of a Committee which sat in 1880 to revise the form of the statistics. Considerable changes have been introduced since then, and certain individual railway administrations have made considerable progress in the introduction of modern railway statistics, but the Acworth Committee which sat in 1921 criticised the figures prepared and used for the purposes of the Railway Board as being out of date and not in conformity with present-day practice.

The main changes recommended by the Committee of 1922 and accepted by the Railway Board are :—

(1) The introduction of monthly statistics in addition to the yearly statistics at present furnished to the Railway Board.

(2) The classification of railways under three classes for statistical purposes.

The former change will ensure the supply of up-to-date information of the working of railways to the Railway Board and will enable railways to compare their own working with that of other railways month by month as is done in England and America. The second change will relieve the smaller railways of the necessity of the detailed statistics which lar[illegible] have to prepare.

Revised Statistics were introduc[illegible] October 1923, on all railways and [illegible] value has been proved as not only [illegible] able to compare their results with th[illegible] by other railways but the Railway [illegible] possession of up-to-date figures o[illegible] all railways. Starting from Apr[illegible] complete monthly statistics of all cla[illegible] have been published on the lines of [illegible] statements issued by the ministry [illegible] for English Railways and are on [illegible] public.

Earnings.—Of the total earn[illegible] ways of Rs. 112.36 crores, Rs 65 [illegible] 58.3 per cent were from goods traff[illegible] crores or 34 per cent from passenger [illegible] Rs. 8.57 crores or 7.7 per cent [illegible] luggage and miscellaneous earnings [illegible]

Passenger Earnings.—Pass[illegible] showed a decrease of 3 45 per cent fro[illegible] to Rs. 38.13 crores. The following [illegible] the numbers of and earnings from [illegible] separately for each class for the 4 ye[illegible] to the War and for the 6 latest y[illegible] for season and vendors' tickets ar[illegible] rately for the last 4 years as well as [illegible] their respective classes.

* Excludes the Maurbhanj and Parlakimedi Light Railways for which is not available.

† The number of season and vendor's tickets and their earnings included classes ; the former at the rate of 30 single journeys per month.

Note.—In previous reports the sum of the number of passengers carried way has been shown as the total number of passengers carried on all railway ling over two or more railways have thus been counted as two or more pa number of passengers carried on all railways is the same as the total number o ing and this figure has been adopted for number of passengers carried in the number of passengers originating is not available prior to 1923-24 the figures been adjusted.

Rates Advisory Committee

In their terms of reference the Acworth Committee were directed to report *inter alia* " whether the present system of control by Government of rates and fares and the machinery for deciding disputes between Railways and traders are satisfactory, and if not to advise what modifications are desirable." The Committee recommended the establishment of a Rates Tribunal to adjudicate upon disputes between Railways and the public in the matter of rates and fares levied by the former. After careful consideration it was decided, with the sanction of the Secretary of State, to set up a Rates Advisory Committee consisting of a President, one Member representative of Commercial interests and one [illegible] rests. [illegible] with [illegible] and make recommendations to Government on the following subjects :—

(1) Complaints of undue preference (Section 42 (2) of the Indian Railways Act, 1890).

(2) Complaints that rates are unreasonable in themselves,

(3) Complaints or disputes in respect of terminals (Section 46 of the Railways Act

(4) The reasonableness conditions as to specially liable to liable to cause d chandise.

(5) Complaints in respe packing attached

(6) Complaints that R not fulfil their o reasonable facil 42 (3) of the In di

Sir Narsimha Sarma late Executive Council of th agreed to serve on the Co Mr. S. D. Manson, Direct Railway Board, was appo represent Railway intere Commercial representative select one for individual panel consisting of membe various Chambers of Co Associations.

It was first laid down th reference to the Committee to the agent of the Railw deposit of Rs. 100 and tha the receipt of such applica Railway should prepare a and submit it with his b the to the Rai

[illegible] on the recommendation of the Rates Advisory Committee the Government of India reviewed the above procedure and decided that in future applications should be submitted direct to the Government of India, Railway Department, copies being forwarded to the Agent of the Railway concerned, that the deposit of Rs. 100 be reduced to Rs. 10 and that the period of 3 months allowed to the Agents of Railways for the submission of the statement of their case be curtailed to 2 months. The revised procedure was introduced with effect from the 24th January 1927.

As regards complaints made for submission to the Committee cases were slow in coming in but by the end of March 1927, 15 cases had been submitted, out of which six have been referred to the Committee, on one of which their recommendations have been received for the consideration of the Government of India.

Publicity.

In other countries it has been recognised that publicity plays a very great part in attracting business to Railways. In this country, however, little attention had in the past been given to it except on the Great Indian Peninsula Railway. The G. I. P. Railway had by means of pamphlets and advertisements in co-operation with the Canadian Pacific Railway attempted to attract American tourists to India, and has met with a good deal of success. This has not only added to the earnings of the Railway but has also helped the business of the country generally. The propaganda work mentioned above was directed towards attracting upper class tourist traffic, but it was essential to devise publicity methods to appeal to the large bulk of the people of India from whom the Railways obtained their most paying business. The people were mainly illiterate and the circulation of papers and handbills even in the vernaculars or advertisements in the press scarcely touched them. With a view to reaching the general mass of the people the Great Indian Peninsula Railway, which had a Publicity Bureau, introduced in November 1925 a travelling cinema which gives exhibitions in the open air illustrating instructive subjects, and films of fairs and festivals, etc.

The Railway Board considered that it was necessary to develop the system in force on the Great Indian Peninsula Railway and to extend it to the other three State-worked Railways. The question was fully discussed with the Agents of State-worked Railways and as a result it was decided to establish Publicity Bureaux on the North Western, East Indian and Eastern Bengal Railways. Sanction was accorded to the creation of a post of Publicity Officer for each of the three Railways as a temporary measure for three years in the first instance with a requisite staff of photographers, cinema operators, clerks, menials, etc.

The necessity for a Central organisation to co-ordinate and direct the methods on the several Railways has also been recognised by the Board, and the Board have sanctioned a temporary post of Chief Publicity Officer for a period of three years from 1st March 1927.

The new business that this Publicity propaganda is e[illegible] to bring to Railways will [illegible] be very considerable and the expen[illegible] [illegible] to the extra earnings. Moreover the Publicity Bureau will be in charge of the work in connection with advertisement by the public on Railways, and it is anticipated that income from that source alone will more than cover the expenditure on the establishment charges of the Bureau on most of the Railways.

Remodelling of State Railway Workshops

The whole question of the capacity of the workshops of the State Railways and the possibility of their reorganisation and improvement on co-ordinated lines was investigated during the cold weather of 1924-25 by the State Railway Workshops Committee, an expert Committee presided over by Sir Vincent Raven, formerly Chief Mechanical Engineer, North Eastern Railway, England. The results of this investigation have indicated the imperative necessity at any rate for some time to come, for heavy expenditure on the remodelling and improvement of State Railway Workshops in general. The recommendations of the Committee as to the lines on which the reorganisation and improvement of the workshops should proceed have been examined and, in the main, accepted by the Railway Board. These recommendations with the Railway Board's views thereon have recently been communicated to the Railway Administrations concerned and a special officer has also been appointed to see that effect is given to them as early as possible.

The important schemes of workshops construction and remodelling on which work was in progress during the year under review were as follows:—

(1) Kanchrapara—Remodelling of Loco shops and machinery (E.B.Ry.)
(2) Dohad—New Loco. shops (B. B. & C. I. Ry.)
(3) Perambur—Remodelling of shops (M. & S. M. Ry.)
(4) Lucknow—Extension to Loco. shops (E. I. Ry.)
(5) Trichinopoly—New workshops (S. I. Ry.)

Capital Expenditure.—The outlay during the year 1926-27 was Rs. 29·20 crores, of which Rs. 27·14 crores represented expenditure incurred on State-owned lines.

Considerable progress has been made with the programme of new construction and although only 421 miles of new railway were opened for traffic during 1926-27, at the close of the year there were 2,256 miles under construction.

Trade review.—The earnings of railways are dependent on the general prosperity of the country which in the case of India is most easily measured by the agricultural position and the returns of foreign trade. Judged by the usual criteria, the year was not a favourable one for trade generally and this is reflected in the fact that the total earnings of all railways decreased by Rs. 1 crore, *viz.*, from Rs. 113·39 crores to Rs. 112·36 crores.

The earnings from first and second class passengers carried still continue to decrease but inter class passenger traffic again shows an increase. Third class passenger traffic shows an increase of nearly 4 million in numbers but a [illegible] in earnings o[illegible] Rs. 35 lakhs on a[illegible] of redu[illegible] of f[illegible]

The tonnage of and earnings from the main commodities on Class I Railways during the last two years are shown in the table below. The principal increases were under Jute, Coal, Grain, Jagree, ... principal decreases ... wood unwrought ...

Commodity.	1925-26		1926
	No. of tons originating in millions.	Rs. in crores	No. of tons originating in million

	76·71	62·88	82 07

Open Mileage.—The total route mileage on March 31st, 1927, was 39,048·88 made up of—

Broad-gauge.. .. .. 19,367·44 miles.
Metre-gauge.. .. .. 15,931·81 "
Narrow-gauge .. .. 3,749·63 "

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows:—

Class I 35,131·95 Miles = 90 per cent.
Class II 1,775·31 " = 7 "
Class III 1,141·62 " = 3 "

Class I includes all the 5'-6" gauge mileage, 13,761 miles or 87 per cent. of the metre-gauge, and 2,004 or 54 per cent. of the narrow-gauges.

The State owned 28,004 miles or about 71 per cent. and directly managed 15,716 miles or about 40 per cent. of the total mileage open at the end of the year.

During the year 1926-27, 420·77 miles of new lines were opened for public traffic. Of this mileage, 348·52 miles belong to Class I, and 52·25 miles to Class II Railways.

Additions to Equi[illegible] During 1926-2[illegible] ... ble number of old ... replaced during th... larger seating ca[illegible] there was an incr[illegible] modation of 25,35[illegible] 7,487 in the metr[illegible] crease of 32,837. [illegible]	2 90[illegible]
[illegible]	10,20[illegible]

The additions to the goods stock of Class I railways were 863 covered and 972 open broad-gauge and 971 covered and 474 open metre-gauge wagons.

The Opening of the Khyber Railway.—The opening of the Khyber Railway on November 2, 1925, marks an interesting stage in the development of India's great railway system. Previously the railway stopped short at Jamrud a few miles from Peshawar on the Indian side of the Khyber Pass. This pass has been the main trade route to India from the north from the earliest days and most of the trade with far distant Central Asia still follows this route in picturesque caravans.

The question of extending the railway along the trade route was first considered in 1890 and since then three possible routes have been surveyed, namely, the Loi Shilman route, the Mullagarhi Shilman route and the Khyber Pass route.

As a result of a survey rapidly made in 1919 by Colonel G. R. Hearn, C.I.E., D.S.O., R.E., it was decided to build a railway through the Khyber Pass on a new alignment and after considering the merits of a line built to a two feet gauge, a metre-gauge with rack and a 5'-6" gauge adhesion line it was finally decided that a 5'-6" gauge line should be adopted.

The total length of the Khyber Railway is 27·74 miles from Jamrud to the Afghanistan frontier. Although this line is only a short one yet the work entailed has been very heavy. Starting at a height of about 1,500' it rises to about 3,500' at Landi Kotal and then descends to a height of about 2,400' at Landi Khana.

The ruling grade for up trains to Landi Kotal is 1 in 33 compensated for curvature while that for down trains from Landi Khana is 1 in 25 also compensated.

The line passes through 32 tunnels with a total length of nearly 3 miles. There are in all ten stations excluding Jamrud and of these, three are reversing stations necessitated by the development of distance for reductions of gradient.

Financial Results of Working.—The total gross earnings of all railways in India during the year 1926-27 amounted to Rs. 112·36 crores as compared with 113·39 crores in 1925-26. These figures, however, include railways owned by Indian States and companies for which the Government of India has no direct financial responsibility. The figures of receipts and expenditure for railways with which the Government are directly concerned are as follows:—

		(Omitting 000). 1925-26.
		Rs.
Traffic receipts from Government Railways ..		99,70,00
Interest on Depreciation and Reserve Fund balances ..		53,39
Surplus profits from Subsidized Companies' railways ..		35,07
Total ..		1,00,58,46
	Rs.	
Working expenses including depreciation ..	64,41,96	
Surplus profits paid to Companies ..	1,77,42	
Interest on Government debt ..	24,81,12	
Land and subsidy to Companies ..	4,38	
Miscellaneous ..	25,93	
Total charges ..		91,30,81
Net gain ..		9,27,65
Contribution from Railway to General Revenues ..		5,48,80
Railway reserve ..		3,78,85

After meeting all interest and annuity charges Government therefore received a net profit of 13 12 crores as against a profit of 6·47 crores in 1923-24. On the capital at charge of the State *minus* the net receipts, that is the gross receipts *minus* the working expenses, have in recent years given the following returns:—

	Per cent.
1913-14 ..	5·01
1922-23 ..	4·38
1923-24 ..	5·24
1924-25 ..	5·85
1925-26 ..	5·31
1926-27 ..	4·95

Up to date figures of the results of working of other [illegible]tries are not available but the f[o]llowing table compares the latest a[v]ailable figures of a[illegible] rec[ei]pts pe[r] ton m[i]le of those countries which have published statistics of working later than 1919:—

	Receipts per ton mile. Pies.
United States of America 1925 ..	5 85*
United Kingdom 1925 ..	15·17
Japan 1924-25 ..	7·22
Switzerland 1924 ..	21·91

	Receipts. per ton mile Pies.
South Australia 1924-25 ..	17·01
Canadian Railways 1925	5·30*
[I]ndia [1]926-27	6 [illegible]

Con[v]erted at $ 4 80=£ 1 and at Re [illegible] 6[illegible]

In the case of receipts per passenger mile the figures for United States of America and India are as follows:—

United States of America 1925 . 15·38 pies.

India 1926-27 .. .. .. 3·59 „

while in England the present fare charged per mile third class is 18 pies.

From the above it w[illegible] transportation of freight cheapest in the world passenger traffic.

1926-27	4 906	50 925	68	007	4,[illegible]0

Indianisation.—The various Railway Companies managing State and other Railway lines have followed the lead given by Government and accepted the recommendation of the Lee Commission that the extension of existing training facilities should be pressed forward as expeditiously as possible in order that recruitment in India may be advanced as soon as practicable up to 75 per cent. of the total number of vacancies in the Superior Services of the Railway concerned.

Schemes of recruitment.—The Secretary of State's approval to the schemes of recruitment and training of superior officers of the State Railways in the main branches of service—(1) Civil Engineering, (2) Transportation, (3) Commercial and (4) Mechanical Engineering—were received and the Regulations for the recruitment of these services issued under Railway Department Resolution No. 2508-E of 15th July 1926. Schemes of recruitment for the Electrical Engineering and Signal Engineering Departments have been formulated and submitted to the Secretary of State in Council for his approval. Schemes for other branches of the service are under consideration. Certain Company-worked Railways have expressed their desire to join the Railway Board in their scheme of recruitment and others in their scheme of training the Superior Railway Officers.

Public interest in the question has been maintained during the year, finding voice in the press and by interpellations in the Legislature. Considerable progress has been made with the scheme for the training of junior railway officers and of the senior subordinate staff on Indian railways. In this connection a Transportation School was opened at Chandausi on March 2nd, 1925.

Progress was also made in 1926-27 towards the formation of a Railway Training School at Lyallpur for the North Western Railway. A temporary training school for the G. I. P. Railway has been established at Bina, pending the provision of a permanent school at Betul and the scheme for forming a similar school at Gomoh for the E. I. and E. B. Railways is under consideration.

These schools will provide courses of training for probationers before they are allowed to take up regular duties and for members of the staff to enable them to qualify for promotion to the upper grades; and in addition to these courses separate refresher courses will be provided through which the entire subordinate staff will be passed through at definite intervals.

College for training Railway Officers at Dehra Dun.—The provision of an institution to give practical training to junior officers on railways has been a long-felt need. The Railway Transportation School at Chandausi which is meant for the training of subordinates only, could neither be suitably extended to provide a college for officers nor afford the facilities necessary for the purpose. The Railway Board have, therefore, decided to provide a college at Dehra Dun, which place is eminently suited for the purpose owing to its climate, situation and proximity to two other similar institutes, *viz.*, the Forest Research Institute and the Prince of Wales' Royal Indian Military College. The layout of the Railway College is under preparation and it is expected that work will soon be commenced. The scheme is estimated to cost about Rs. 20 lakhs.

Fatalities and Injuries.—During 1926-27 there was a decrease of 25 in the number of persons killed and an increase of 127 in the number of persons injured as compared with the figures of 1925-26. The number of passengers killed shows a decrease of 30 while the number of passengers injured shows an decrease of 59.

The following table shows the numbers killed and injured separately under passengers railway servants and others for 1925-26 as compared with 1926-27 :—

—	Killed.		Injured.	
	1925-26.	1926-27.	1925-26.	1926-27
A. Passengers—				
(1) Accidents to trains, rolling-stock, permanent-way, etc.	22	16	161	126
(2) Accidents caused by the movement of vehicles used exclusively on railways	352	324	1,131	1,117
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	3	7	31	21
B. Servants—				
(1) Accidents to trains, rolling stock, permanent-way, etc.	20	25	141	126
(2) Accidents caused by the movement of vehicles used exclusively on railways	333	319	1,285	1,253
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	49	46	[illegible]	[illegible]

The following table shows the numbers killed and injured separately und s rv ants and others for 1925-26 as compared with 1926-27 —*contd.*

	Killed	
	1925-26.	1926-27
C Others—		
(1) Accidents to trains, rolling-stock, permanent-way, etc.	35	19
(2) Accidents caused by the movement of vehicles used exclusively on railways	2,081	2,10‾
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	23	30
Total ..	2,918	2 893

Of the total number of 2,893 persons killed 1,784 were trespassers on the line and 253 committed suicide. Thus 2,037 or over 70 per cent. of the persons killed on railway premises were for causes over which the railways have no control.

Local Advisory Committees—With the formation of a Committee on the B. N. Ry. during 1926-27 all State-owned Railways now possess Local Advisory Committees. A Committee has also been formed on H E. H the Nizam's Guaranteed State Railway. the subjects discussed are many and varied indicating increasing value attached by the public to this scheme for bringing Railways into close touch with their clients. Of the many subjects discussed the following may be mentioned as typical -- Overcrowding in trains, time table attractions, Refreshments, drinking water and other facilities for passengers, Reductions and concessions in fares, Goods rates, Construction of new lines and stations, Designs of Railway Carriages, and Passengers travelling without tickets.

Compensation for loss and damage to goods in transit.—A great improvement was made during 1923-24 in reducing the amount paid in compensation for loss and damage to goods in transit, the tota Railways being Rs 41 Rs. 22 lakhs in 1924 25 1925-26. This satisfacto the special attention th to the subject by the R the remedial and preven by Railway Administrat supervision over the st riveting of wagons and of the Watch and Ward I

As a result of a resolution lative Assembly in March was appointed to revise forms. The recommend mittee, received in Septe considerable changes in t aiming chiefly at imposin onus of proof in cases whe be *prima facie* due to m staff. After obtaining Governments, Railway Chambers of Commerce tions, the revised forms legal advisers of Gover note forms A, B, D, G ar 1924.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

Mileage open	.. ..	1,049·09
Capital at charge	..	Rs. 22,14,85,000.

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by ——— to the Bengal and North-W Railway Since then ex tensive have been made n both sections. It is connected metre gauge system at C Eastern Bengal State Rail the Oudh and Rohilkhan

Bombay Baroda.

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat *via* Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana Malwa metre gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11 685,581.

Capital at charge	..	Rs. 73,82,10,000.
Net earnings	..	Rs. 4,51,71,000.
Earnings per cent. ..	..	6·12

Burma Railways.

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near future. In reply to a question in the Imperial Legislative Council in 1919, Sir Arthur Anderson said —" During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chitagong and certain stations on the Burma Railways south of Mandalay. A rival route via the Hukong Valley between the northern section of the Assam-Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect. It was commenced as a State Railway and transferred in 1896 to a Company under a guarantee.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 was [illegible] for the [illegible] on the metre gauge of the Northern Bengal State Railway which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

The East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholders by annuities, but leased it again to the company to work under a contract which was terminable in 1919

The contract was not terminated until January 1st, 1925, when the State took over the management.

Capital at charge	..	Rs 1,36,26,98,000
Net earnings	..	Rs. 7,69,64,000
Earnings per cent. ..	..	5·65

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line *via* Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats these sections being 15¾ miles on the Bhore Ghat and 9¼ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th 1925, when the State took over the management

Mileage open	.. .	36,70·56
Capital at charge	..	Rs. 1,13,19,57,000
Net earnings	..	Rs. 4,51,41,000
Earnings per cent. ..	..	3·99

Madras Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre gauge built to meet the famine conditions in the Southern Mahratta Country and [illegible] to a large Company called the Madras and Southern Mahratta Railway Company

Mileage open	.. ..	3,041·73.
Capital at charge	..	Rs. 57,39,24,000.
Net earnings	..	Rs. 3,82,63,000.
Earnings per cent.	.. ..	6·67.

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

Mileage open	.. ..	6,339·93.
Capital at charge	..	Rs. 1,35,28,23,000.
Net earnings	..	Rs. 43,26,000.
Earnings per cent.	.. ..	4·02.

Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre gauge systems to the North and those to the South of the Ganges; a third rail was laid between Bhuriwal and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway

The working of this railway was amalgamated with that of the East Indian Railway from 1st July 1925.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon *via* Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	.. ..	1,911·93
Capital at charge	..	Rs. 33,30,09,000
Net earnings	..	Rs. 2,70,61,000
Earnings per cent.	.. ..	8·13

The Indian States.

The principal Indian State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State the Kathiawar system of railways, constructed by subscriptions, among the several Chiefs in Kathiawar; the Jodhpur and Bikaner Railways constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

PROGRAMME OF FUTURE CONSTRUCTION.

At the end of the financial year 1926-27 a total of 2,554 miles of new lines was under construction, distributed as follows:—

	Miles.
5'-6" gauge	932.[illegible]3
3'-3⅜" gauge	1,260 07
2'-6" gauge	360.21

During 1925-26 sanction was accorded to the construction of new lines totalling 1,102·16 miles.

	Miles.
5'-6" gauge	204 58
3'-3⅜" gauge	249.17
2'-6" gauge	38.54

Khyber Railway.

The construction of the Khyber Railway, a length of about 28 miles, was sanctioned in July [illegible] and in November of that year, after various [illegible] had been overcome, the [illegible] actually commenced. [illegible] and arduous conditions [illegible] nction had to be carried out, five years elapsed before the section from Jamrud to Landikotal, a length of about 21 miles, was completed and opened for public traffic on 2nd No[illegible] 925 The portion from [illegible] otal to [illegible] is was opened on 3-4-25.

This is the first 5 feet 6 inches gauge line which has been built to the new Standard Dimensions and allows for a maximum running width of 12 feet and running height of 15 feet 6 inches The great engineering difficulties which have had to be overcome, and the standard to which the railway has been built render it a technical achievement ranking with the greatest engineering works carried out by Railway Engineers

The line is situated entirely outside the administrative border of British India in the strip of tribal territory which separates it from Afghanistan. The trade that passes through the Khyber Pass is already considerable and it is hoped that the railway will still further increase its volumo, thereby bringing profit and employment to many who in the past have subsisted with difficulty on the meagre agricultural resources of the country which it traverses

Lines under Construction.

Of the total of 2,554 miles of lines of various gauges under construction at the end of the year those mentioned below or the more important including three (the Kazipet-Ballarshah, the [illegible] Indian Coalfields line and the Raipur [illegible] which are being built to serve

Kazipet-Ballarshah.

The Ballarshah Extension of the N. G. S. Railway, 150 miles long, is perhaps of first importance, for it will open up a new broad gauge route from Madras to the North and effect a saving in distance of some 200 miles in the journey from Madras to Delhi. The section from Kazipet to Padapalli has been already opened to traffic, and construction is now well advanced on the remaining portion, which passes through a difficult tract of country between the Godavari and Wardah river where there are large bridges. Good progress has been made with these bridges and the portion of the line between the two rivers is being rapidly completed. It is hoped that it will be possible to open it throughout for public traffic by the end of 1927.

The Central Indian Coalfields Railway.

This broad gauge project is important as opening the way for the development of the South Karanpura and Korea Coalfields; it will also open a shorter route for coal traffic to the North-West and West.

Of the two sections under constructions, *i. e.* [illegible] (113 miles) and the [illegible] progress during [illegible] n satisfactory but on the former section considerable damage was done by floods which delayed work. It is hoped to have both sections ready for opening to traffic by December 1928.

Raipur-Vizianagram Railway.

This trunk line on the 5′-6″ gauge, 261 miles in length, passes through a large undeveloped area, and will provide direct communication between the Central Provinces and the new Harbour now under construction at Vizgapatam on the east coast. The section of the line from Vizianagram to Parvatipuram, 48 miles long, was completed and opened to traffic in 1924.

During 1926-27 some realigning work has been carried out which will appreciably reduce the length of the line. Work at the nothern and southern ends is progressing well but on the middle portion sickness and delay in obtaining possession of land have impeded progress. The line will be opened by sections as they are ready, but it is not expected that the whole line will be opened throughout till 1931.

Calcutta Chord Railway.

Progress has been rather slow on account of the exceptional nature of the works completed in the scheme, and the coal strike in England seriously delayed the supply of heavy plant required for sinking the caissons of the Bally Bridge. This was expected to arrive in October 1926, but did not begin to arrive till April 1927.

The connection will probably not be completed till 1930.

Amritsar-Narowal Railway.

The construction of this line about 40 miles long on the N. W. [illegible]y broad gauge was [illegible] in February 1926. It will tra[illegible] a fertile and well irrigated area and fa[illegible] pilgrimage to the Sikh shrines at Dera Baba Nanak and Kartarpur; by giving a direct connection between Amritsar and Jammu, it is also expected to stimulate the already considerable trade between the former and Kashmir. A length of 28 miles up to Dera Baba Nanak from the Amritsar end will be opened shortly but the remainder including a large bridge over the Ravi River is not expected to be finished until 1928.

Chak Jhumra Khushab Railway.

The construction of this broad gauge chord line by the N. W. Railway was sanctioned in two parts, (*i*) from Chak Jhumra to Chiniot in November 1926 and (*ii*) the remainder in April 1927. It will provide across connection between the Lyallpur District and Shahpur which is badly required and will also provide a shorter alternative route to Waziristan to the relief of the main line north of Lahore. About 80 miles of new line are involved and two large bridges over the Chenab and Jhelum rivers. It is hoped to open this line in 1929.

The Villupuram-Trichinopoly Railway.

The construction of this metre gauge chord on the S. I. Ry., 110 miles long, was put in hand in the year 1925-26. It is being built to main line standard and will form an alternative route between Madras and Trichinopoly. Its importance lies mainly in the relief it will afford to the existing main line, but it will also serve to open up and develop a populous tract of country.

Progress has been satisfactory but the supply of permanent way material has been interfered with by the coal strike in England. It is hoped to have the line ready for opening to traffic by the end of 1928.

The Shoranur-Nilambur Railway.

The construction of this broad gauge branch on the S. I. Railway, 41 miles long, was sanctioned in May 1924. It is designed to open out and develop the Moplah country in the Malabar District with its important forest areas. From Shoranur to Angadipuram (18 miles) was opened to traffic by H. E. the Governor of Madras on the 3rd of February 1927 and it is hoped to have the remaining and more difficult portion ready for opening by June 1927.

Kangra Valley Railway.

This line is a 2′-6″ gauge extension from the N. W. Ry. broad gauge terminal at Pathankote and traverses the wide and fertile tract known as the Kangra Valley. The line will shorten the journey to the important hill station of Dalhousie and Dharamsala.

The Punjab Government, which has in hand the construction of the Uhl Hydro-Electric Scheme, had agreed to guarantee this line against loss in working over a number of years as a rail connection of some kind is necessary for the transport of machinery and stores required for the Hydro Electric Scheme and for maintenance of the transmission lines after opening.

New Construction Programme.

In recent Annual Reports reference has been made to the arrangements and investigations which were being mad[e] with a view to the adoption of a largely in[illegible] programme of new [illegible]ction. The figure of [illegible] mileage under

construction" has been steadily growing and the efforts of the Railway Board and the Railway Administrations have now materialised in the production of a 5-year programme of constructions by each of the large Railways. These programmes have been prepared in collaboration with the Governments of the Provinces served by the several Railway systems and subsequently discussed by the Agents with the Railway Board. The procedure laid down, moreover provides for the annual revision of them after further consultation with the Local Governments.

It cannot, of course, be expected that every one of the many projects, which have been included in the programmes, will prove to be financially justifiable, but since the sum of the total additional open line mileage shown in them amounts to over 7,000 miles at the end of the quinquennium, there appears to be no reason why the anticipations in last year's Report in regard to an annual addition of 1,000 miles to the open mileage of Indian Railways should not be realized.

Indian Railway Engineers employed on the big Railway systems have sometimes been criticised in the past for a lack of ability to design low grade railways so that the construction cost may be commensurate with the traffic that is expected to be carried and it is recognised that in order to build some of the lines included in the construction programme on a remunerative basis, special attention must be paid to the necessity for this. Although, therefore, there has been nothing authoritative in the past to preclude the building of cheap feeder lines, it has been thought advisable to encourage Railway Administrations to give special consideration to the question by laying down on broad line certain standards of constructions to suit different traffic requirements These standards range from the highest class designed for lines which have to carry a fast and heavy traffic down to the lightest form of construction and include feeder lines of lesser gauge than the parent lines.

Electrification of Railways.

The electrification of railway lines in the Bombay area at present in hand comprises (a) on the G. I. P. Ry. the suburban lines up to Kalyan and the main lines to Igatpuri and Poona; (b) on the B. B. & C. I. Railway the suburban lines between Church Gate and Borivli and the main line between Grant Road and Bandra. The work on the electrification of the G. I. P. Ry. lines has reached an advanced stage and electrified services have already been opened between Victoria Terminus and Kurla and Bandra via the Harbour Branch and between Victoria Terminus and Bandra. These services have become highly popular and promise to be entirely successful.

With a view to inaugurating electrified services on the whole of these sections as early as possible the work on the uncompleted portions is being vigorously pushed forward. By the opening of these electrified services not only will Bombay derive a great benefit in the matter of a better distribution of its population, but on the railway side a considerable reduction in the operating ——— will be effected

Re-investigation on the electrification of lines in the vicinity of Calcutta and Madras were also completed during the year The results of these investigations are at present under consideration. Proposals for the electrification of the Trichinopoly-Madura and other sections of the S. I. Railway have also been under consideration by the Railway Board in view of the possibility of the supply of cheap power from hydro-electric sources.

An examination of hydro-electric schemes in the Madras Presidency, of which mention was made in the last year's report, was carried out during the year and the results of these investigations were under discussion with the Government of Madras at the end of the year.

Dindigul-Pollachi.

The construction of this line—75 miles 3'-3⅜" gauge—was sanctioned in April 1925 When completed it will link up the isolated metre gauge Podanur-Pollachi branch with the South Indian metre gauge system and while providing direct communication between the West Coast and the Madura District will open up the intervening districts. The probable date of opening is 31st March 1928.

Madura-Bodinaykanur.

This line 55 miles, 3'-3⅜" gauge, is of considerable importance from the administrative point of view as it will help to open up the tract of country between the South Indian Railway main line and the Travancore Hills It is expected, that, while facilitating trade and generally assisting in the development of this rich tract of country the branch will attract considerable passenger traffic to the trade centres of Theni and Bodinayakanur.

Nidadavolu-Narasapur and Gudivada-Bhimavaram Railways.

These lines which branch off the Madras and Southern Mahratta Railway system will provide railway communication in the densely populated portions of the Kistna and Godaveri deltas where, owing to the number of canals, existing communications are inconvenient.

It is anticipated that they will be opened for traffic in 1928.

Agra-Bah

This line will open out an irrigated tract of the Agra District situated at the head of the Jumna Chambal Doab at present devoid of railway communication.

Calcutta Chord Railway.

This line starts from a point near Dankheni station on the Burdwan-Howrah Chord of the East Indian Railway and joins the Eastern Bengal Railway near Dum Dum Junction.

It is about 8 miles in length and includes a bridge over the Hooghly river at Bally. This connection is primarily intended for export of coal from the East Indian Railway. But it is likely in the near future to be used also for coal from the Bengal Nagpur Railway Coalfields, and with the developments anticipated in the terminal arrangements at Calcutta and the electrification of the lower portion of the Eastern Bengal Railway a large proportion of the Suburban passenger traffic will pass over it.

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, since 18[illegible] various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the project has again been investigated with the idea of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points.

In 1913, a detailed survey was made by the South Indian Railway Company, and a project has now been prepared. This project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20·05 miles of which 7·19 will be upon the dry land of the various lands, and 12·86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed M[illegible] M. Inst. C.E. to be the eng[illegible]eer to [illegible] of the [illegible]ys to [illegible] the be[illegible] oute for a railway from India to [illegible] The coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and head-quarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 100 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kaladan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 200 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated [illegible] t has to cross three [illegible] ummit levels of 2,65[illegible] Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel of 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 ft aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a p[illegible] financial [illegible] and both may be ruled out of

a Value f.o.b. b Export values. Revised

ıe feature which stands out most promi-
ly in a survey of the mineral industries
ıdia is the fact that until recent years little
been done to develop those minerals which
essential to modern metallurgical and che-
.l industries, while most striking progress
been made in opening out deposits from
[illegible] ble for export,
[illegible] by what may
[illegible] processes. In
respect India of to-day stands in contrast
ıe India of a century ago. The European
ıist armed with cheap supplies of sul-
ıc acid and alkali, and aided by low sea
hts and increased facilities for internal
ibution by the spreading network of rail-
, has been enabled to stamp out, in all but
ote localities, the once flourishing native
ufactures of alum, the various alkaline
pounds, blue vitriol, copperas, copper, lead,
and iron, and seriously to curtail the ex-
trade in nitre and borax. The reaction
nst that invasion is of recent date. The
quality of the native-made iron, the early
cipation of the processes now employed in
ope for the manufacture of high-class steels,
the artistic products in copper and brass
the country a prominent position in the
ent metallurgical world, while as a chief
ce of nitre India held a position of peculiar
.ical importance until, less than forty years
the chemical manufacturer of Europe
d among his by-products, cheaper and
e effective compounds for the manufacture
xplosives.

ʼith the spread of railways, the development
manufactures connected with jute, cotton
paper, and the gradually extended use of
ricity the demand for metallurgical and
nical products in India has steadily grown.
ore long the stage must be reached at which
variety and quantity of products required,
now imported, will satisfy the conditions
ssary for the local production of those
ch can be economically manufactured only
.he supply of groups of industries.

Coal.

ost of the coal raised in India comes from
Bengal and Bihar and Orissa---Gondwana
-fields. Outside Bengal and Bihar and
ssa the most important mines are those at
yareni in Hyderabad, and in Central Provin-
but there are a number of smaller mines
ch have been worked at one time or another.
ıe subjoined statement shows the production
ll mines in British India and in Indian States
ng 1926, as compared with 1925 :—

Province.	1925.	1926.
	Tons.	Tons.
..am	318,842	301,061

Rajputana	28,153	31 [illegible]
Total ..	20,904,877	20,909 167

Coal Prices.—The value of the coal produced in India is reported annually by mine-owners. It represents the actual or estimated wholesale price of coal at the pit's mouth. In 1926 the average value was Rs. 4-13 per ton The lowest value, namely Rs. 2-8 per ton, was recorded in 1905, and the highest (Rs. 7-11) in 1922 when demand kept ahead of supply The table below compares the average value at pit's mouth of Indian coal with the declared export value per ton in each of the last five years. The declared export value is generally over twice the value at the pit's mouth. The total estimated value at pit's mouth of the output in 1926 was Rs. 10,15 lakhs, as compared with (Rs. 12,64 lakhs) the estimate for 1925.

AVERAGE VALUE OF COAL

	Declared export value per ton Rs.	A.	Value at the pit's mouth per ton Rs.	A.
1922	13	8	7	11
1923 . ..	17	2	7	7
1924	16	9	7	1
1925	15	0	6	1
1926	12	14	4	13

With the above average value may be compared the values at the pit's mouth of coal in foreign countries, as shown below (the figures represent the average of the latest five years for which quotations are available.)

	Rs.	A
United Kingdom	14	3
Australia	11	7
Japan	12	1
United States of America .	10	10
India..	6	10
South Africa	4	13

It must be borne in mind that this value is affected by many factors, such as the quality of the coal raised, its accessibility, the machinery in use, nearness to the surface, etc., besides the differences in the cost of labour and transport In India a large percentage of the coal which is now being worked is comparatively near the surface and labour comparatively cheap. Indian coal, therefore, has a lower value at the pit's mouth than the coal of any other country except South Africa.

The comparative average prices per ton of Bengal coal (Desharghur) at Calcutta, of Indian Welsh and Natal coal at Bombay and Karachi from 1919 to 1926 are shown in table [illegible] page 25
[illegible]n 926 pri[illegible]es of coal fell [illegible]n all the ports [illegible]
Calcutta, [illegible]y and

Coal Consumption, 1926.

Production of coal	tons	20,999,167
Imports of coal	,,	193,956
Exports of coal	,,	661,711
Excess of exports over imports	,,	467,755
Total quantity retained for home consumption	,,	20,531,412†
Estimated consumption per head of population	,,	0.06

* According to the census of 1921 with increase of 1.19 per mille per annum and excluding figures for Aden and the Andamans and the Nicobar Islands.

† Including bunker coal and coal shipped on Admiralty and the Royal Indian Marine accounts.

Persons employed in the Coal mining Industry.

In 1926, 185,749 persons were employed daily as against 189,262 in 1925, a decrease of 3,513 persons or 1.9 per cent.

The table below gives the output per head employed (1) above and below ground and (2) below ground, in certain specified countries (for details see table 21, page 41). This comparison is somewhat vitiated as the figures are for different years, but nevertheless they are not without some significance. They cannot, however, be taken to give a strictly accurate idea of the relative efficiency of the labour in the countries named. Not only do the conditions of the work below ground vary greatly, but the proportion of persons employed above and below ground is different in the different countries. In Great Britain, in 1925, for example, the workers below ground were 80 per cent of the total number employed, while in the same year in India, where mining operations are still nearer the surface, they were 64 per cent The efficiency of the Indian miner is much below that of miners in most other countries Further labour saving appliances are used only to a small extent in comparison with other countries During the last few years the number of [illegible] in use in Indian Mines ha[illegible] towards the end of 1925 [illegible] fall[ing] off in the demand for coal, a number of machines were withdrawn. The provision of modern screening and loading plants is also receiving increased attention. At present about 4,000,000 tons of coal is mechanically screened and it is anticipated that by 1930, the figure will have increased to 4,750,000 tons Practically all large collieries have either plants actually at work or in course of erection.

	Above and below ground Per head Tons.	Below ground only Per head Tons	
United States	694	..	in 1925

The *per capita* output of coal in India in 1926 is compared below with the results of the preceding five years :—

	Above and below ground Tons.	Below ground only Tons
1922	94.6	161 5
1923	97.8	163 7
1924	103.6	166 8
1925	110.5	173 1
1926	113.1	165 9

THE INDIAN COAL COMMITTEE.

The Indian Coal Committee which was appointed by the Government of India in September, 1924, was, in the main, the outcome of a resolution adopted by the Legislative Assembly in March of that year recommending on economic grounds the imposition of a countervailing duty on South African coal imported into India. Before referring to the Tariff Board the question whether the Indian coal trade was in need of protection against coal from South Africa or against imports of foreign coal generally, the Government decided that the technical aspect of the question should be investigated by an expert committee with the following terms of reference:—"To enquire and report (1) generally, what measures can be taken by Government, by the coal trade, by the railways and by the ports, whether singly or in combination, to stimulate the export of suitable coal from Calcutta to Indian and foreign ports; (2) in particular, whether effective measures can be taken for the pooling and grading of Indian coal for export and [for] bunkering, and how the cost of such should be met

The members of the Committee, which met at Calcutta on October 22nd, were Mr. F. Noyce C.S.I., C.B.E., I.C.S., Secretary to the Government of Madras, Development Department, (President); Mr. C. S. Whitworth, Chief Mining Engineer to the Railway Board; Mr. C. Stuart Williams, Chairman of the Calcutta Port Trust Mr. J.W.A. Bell, of Messrs. Mackinnon, Mackenzie & Co.; Mr. F. C. Legge, C.B.E., Director of the Railway Wagon Pool; Sir Rajendranath Mookerjee, K.C.I.E., K.C.V.O., of Messrs. Martin & Co.; Mr. A. A. F. Bray, Chairman of the Indian Mining Association; and Mr. W. C. Banerjee Vice-Chairman of the Indian Mining Federation with Mr. H. P. V. Townend, I.C.S., as Secretary Its investigations which included visits to Rangoon, Penang, Singapore, Colombo, Madras Bombay and Karachi lasted some five months, its Report being signed on March 28th, 1925

Export Trade.—Chapter I of the Report contains a review of the situation which led to the appoi[ntment] of the Committee and a detailed e[xam]ination of the pos[it]ion [i]n the[se] and [f]oreign ports in which Indian coal is or has been

imported. The export of coal from India which is almost entirely confined to Calcutta falls under three heads, exports to foreign countries, exports to Indian ports and bunker coal. The history of the export trade in coal likewise falls into three periods, pre-war, war and post-war The varying fortunes of the three branches is most succinctly shown by the following figures for typical years :—

Year.	Export of coal to foreign countries.	Export of coal coast-wise to Indian ports.	Bunker coal (Calendar years)	Total.
1913-14	887,362	2,210,517	905,000	4,002,879
1918-19	142,942	101,322	378,000	622,264
1920-21	135,722	1,408,686	936,000	3,480,408
1922-23	97,611	812,136	575,000	1,484,747

The very heavy drop in the exports of coal to foreign countries after 1920-21 was due to the restrictions on export which were imposed in the interests of Indian industrial requirements in July, 1920, leading to the total prohibition of export from March, 1921, except on a reduced scale to the Ceylon Government Railways. These restrictions were not entirely removed until January 1st, 1923, and by that time had led to the disappearance of Indian coal from overseas markets for the time being.

The Report proceeds to examine the nature of the **competition** met by Indian coal both in the overseas markets in which is endeavouring to regain a footing and in the principal home ports, Rangoon, Madras, Bombay and Karachi, in which its extrusion by foreign imports cannot be attributed to the embargo placed on export. For overseas ports, the Committee point out that the quality and price of the supplies obtained from other sources especially from South Africa after the embargo was imposed proved so satisfactory that the pre-war position has been entirely reversed and established business relationships are now an obstacle to the reintroduction of Indian coal even in markets like Colombo where it once held a commanding position. In Indian ports, the quality of the coal supplied has been the most important factor with the purchasers. The conclusion of the Committee thus is that Indian coal cannot hope to hold its own much less to recover its old position, both in home and overseas markets, unless its quality and price are such as to commend it to consumers.

In Chapter II, the Committee proceed to discuss the comparative **merit and prices** of Indian and other coals. An instructive table of analyses shows that there are a large number of collieries both in the Raniganj and Jharia coalfields (by far the two most important fields in India) which yield coal which compares most favourably in quality with South African, Japanese or Australian coal. The calorific value of the coal produced by these collieries is only slightly less than that of Natal and Australian coal, is slightly higher than that of Japanese coal and is considerably higher than that of T[illegible] coal. As regards price, the [illegible] in an e[illegible] series of calculations, shows that Indian coal can only hope to compete in overseas markets if its pithead price is not more than Rs. 2 to Rs. 2-8-0 for Singapore, Rs. 5-5-0 for Colombo and Rs. 5 for Bombay and Karachi. For Madras and Rangoon, the imports of foreign coal are small and the prices of those coals cannot be considered to govern the market. As the average raising costs cannot be placed at less than Rs. 5 per ton for the Raniganj field and Rs. 6 per ton for the Jharia field, it is obvious that in present conditions coal for export can only be produced at a loss. The Committee therefore proceed to discuss the possibilities of economies at the various stages through which coal passes from the seam to the consumer, *viz.*, at the pit, on the railway at the Calcutta docks and on the steamer. The charges at the port of import are the same for Indian and foreign coals except that, in Indian ports, Indian coal has the advantage of exemption from the customs duty of eight annas a ton which is imposed on other coal.

Economies at the Coal Fields.—Chapter III deals with the possibilities of economies at the coal fields. It is held that there is no scope for any reduction in wages whilst the increased use of mechanical appliances for coal cutting would not reduce raising costs unless it were accompanied by an improvement in railway facilities which would permit of an increased output Some small improvements in working methods might be made in some mines but there are only two methods by which any appreciable reduction in raising costs can be secured. These are an increase in output by an extension of machine working and the avoidance of stacking by loading all coal raised direct into wagons. If this latter were done, loss from waste, deterioration and theft would be prevented and the raising costs would be reduced by something like eight annas a ton. Both methods of reducing costs in the coal fields thus depend on an improvement of the railway facilities and this brings the Committee to a detailed examination of the working of the two railways which serve the main Indian coal fields, the East Indian and the Bengal-Nagpur Railways.

Railway Problems.—In Chapter IV, the provision of a regular and adequate wagon supply throughout the year is considered essential A number of recommendations for securing thi are made, the most important of which are the enlargement of the depot stations, the general adoption of the system already in force on certain of the colliery sections on the East Indian Railway of supplying wagons to the collieries before 7 a.m. and clearing them after 5 p.m., the supply of wagons to the individual collieries at regular hours, the installation of weighbridges wherever practicable in order to avoid delays in weighing, the assembly by the railway in full trainloads of wagons intended for the same ship and a constant check at every stage of the movement of wagons from the coalfields to the docks and back. Chapter V is devoted to the question of railway freights, terminals and rebates. The Report points out that working expenses on both railways have increased in recent years by a very much higher percentage than have their ultimate receipts from coal and that it is impossible to calculate the exact cost of hauling one ton of coal one mile No comparison be-[illegible] the cost of hauling at on of coal for a mile and the rate [illegible] for it can thus be made but

a comparison between the present railway rates charged on export coal in India and in South Africa is favourable to Indian coal.

The Committee therefore hold that, whilst there is no statistical case for increasing the rebate of 25 per cent. at present granted on export coal in India, this should be increased to 37½ per cent, that is roughly by eight annas per ton, on the general grounds of the importance of the coal trade in the industrial economy of the country and the admittedly inadequate character of the railway facilities for moving it. The grant of a rebate on bunker coal is not recommended as it is not considered that this would have any appreciable effect in increasing the attractiveness of Calcutta as a bunkering port.

In Chapter VI, some **general recommendations** in regard to railway work are made. Improvements in the system under which the collieries indent for wagons are suggested. It is recommended that collieries should be permitted to put in their own sidings, these to be taken over subsequently by the railways on suitable terms if the traffic passing over them is found to yield a return of 6 per cent. on the capital outlay. The difficulties arising from the overloading of wagons, which have given rise to much criticism from the coal trade, it is proposed to remove by the provision of a type of wagon which when loaded flush with the top would not have too heavy a load whatever the specific gravity of the coal carried in it. It is suggested that the feasibility of providing such a type of wagon should be investigated by a small expert committee and that, meanwhile, all wagons should be marked with a mineral loading index figure which should be used for calculating the height to which coal and other minerals should be loaded according to their specific gravities. More outdoor supervision both by the colliery and the railway staffs is advocated whilst it is suggested that monthly meetings on the coalfields between the railway and colliery representatives should be revived. A recommendation to which the Committee attach especial importance is that open wagons should be supplied to all collieries which instal mechanical appliances for loading coal in order to ensure the loading of coal in the best possible condition with the minimum of slack and dust. They also recommend that the control of wagon supplies which was instituted in 1917 when a Coal Controller was appointed who was replaced in April, 1919, by a Coal Transportation Officer working under the Railway Board should be restored to the two railways themselves who should have a joint officer for the purpose. Preference in the matter of wagon supplies for coal should be restricted to coal required by railways, inland river navigation companies and ocean going steamers under mail contracts with Government, to coal for works of public utility and to coal for export certified in accordance with the proposals made later in the Report.

Docks and Depots—In Chapter VII, the Committee examine the working of the Calcutta Docks and coal depots. They conclude that, whilst the [illegible]d of wagons at the docks could be improved the delays in shipping coal are mainly due to the [illegible] arrival of the [illegible] intended for a [illegible] the facilities for the movement of coal traffic in the docks were improved to the extent contemplated by the Port Commissioners, they would prove sufficient to deal adequately with an extension of the existing coal traffic which can be regarded as probable in the near future. The Port has at present two mechanical loading appliances known as Beckett's plant and the Committee consider that, in order to avoid breakage, whenever shippers ask that their coal should be loaded by this plant, every effort should be made to comply with their request and that save in exceptional circumstances, the first part of each cargo of coal should always be loaded by this plant which could deal with four million tons of coal annually even if only one of the two plants were reserved for coal. The Beckett's plant is, however, only a semi-mechanical plant and the Committee recommend that the question of the most suitable type of mechanical loading appliance for Calcutta should be investigated at an early date by a small expert committee which should report on the best type of mechanical loading appliance adapted to all types of wagon and should also investigate the possibility of using shoots for coal loaded by hand into steamers. A review of the charges levied by the Port Commissioners on coal leads to the conclusion that the financial condition of the Port is not such as to justify a reduction of the charges on coal and that no statistical case can be made out for such a reduction. On much the same general grounds as for the railways, the Committee, however, recommend a reduction and suggest that this should take the form of a reduction of four annas on the river dues on certified export coal. They do not recommend any alteration in the charges on coal at the bunker depots and their only recommendation of importance in this connexion is that the possibility of extending the pontoons and gangways at the Howrah depot into deeper water with a corresponding extension of the railway sidings should be considered.

Freights.—An examination of the steamer freights on coal exported from Calcutta leads to the conclusion in Chapter VIII that the present freights for coal cannot be considered economic in view of the increase cost of working. The Committee explain why Calcutta does not attract tramp steamers which means that freight on coal has always to be paid for at the economic level. They emphasize that freights from Calcutta are fixed on the basis of the demand for tonnage and of the available supply at ports all over the world and cannot therefore be controlled by Government action. They consider that there is no prospect of any reduction in the freight on coal from Calcutta in the near future

Grading and Certification.—Chapter IX in which the Committee discuss the steps which should be taken to restore the confidence of purchasers overseas in Indian coal is the most important in the Report. They emphasize the necessity that any system of grading and certification should be such as to command the confidence of buyers but should not relieve the exporter of any responsibility as to quality. They point out that it would take too long and would be too [illegible] to establish a [illegible] organisation [illegible]ly to the grading of Indian coal and [illegible] that the [illegible]

of the Chief Mining Engineer to the Railway Board who represents the largest purchasers of coal in India should be utilised for the purpose. It would work in conjunction with a Grading Board of which the Chief Mining Engineer would be Chairman and which would also include a representative of the Indian Mining Association and one of the Indian Mining Federation and also nominees of the Bengal Chamber of Commerce and the Bengal National Chamber of Commerce, the two latter representing the interests of consumers on the Board.

A general outline of a scheme for classifying all Indian coal is given and it is suggested that a grading list should be published by the Board [illegible] In this [illegible] would be [illegible] and an analysis of the coal they produce would be given but no colliery would be included in the list without its consent. The Committee hold strongly that only those collieries included in the grading list should be eligible for the special concessions from the railways and the Port Commissioners recommended in previous chapters and that only certified coal from such collieries should receive these concessions. They consider that the decision of the Grading Board as to the classification of any colliery or seam should be final. They formulate a scheme for the inspection of certified coal and suggest a form of certificate. They recommend that the cost of any analysis required should be borne by the colliery concerned and that the cost of inspection should be met by the levy of a fee of one anna per ton of coal inspected. They finally urge under this head that as the services of the Chief Mining Engineer and his staff are not likely to be available for more than two years, a scheme should be introduced by the end of that period for the inspection of export coal by independent officers appointed by the Grading Board. The advantages and disadvantages of selling coal on analysis are examined and it is recommended that exporters of coal to Bombay should be prepared to submit their coal to analysis when selling to consumers who have adopted the system of purchase on calories. They do not consider the certification of bunker coal practicable.

In Chapter X, the Committee briefly examine the possibility of pooling coal for export and pronounce it not feasible.

Chapter XI contains a few miscellaneous recommendations such as the necessity for **propaganda** by exporters of Indian coal; the quotation of prices of Indian coal in sterling the adoption of the system of payment on delivery and of payment of freight on the quantity shown in the bill of lading less an allowance of two per cent. in lieu of weighment when competing coals is sold on these terms; improvements in the coal statistics issued by the Director-General of Commercial Intelligence; and the advisability of obtaining the advice of the Chief Mining Engineer before any large contract for coal is placed either by the Imperial Government or by any Local Government.

Mr. Banerjee appended a **minute of dissent** to the Report in which he laid the present position of the Indian coal trade at the door of the embargo which he attributed entirely to Government action, demanded more railway sidings in the coalfields, considered that the present rebate on coal should be doubled, proposed special rates for coal sent to certain upcountry stations, recommended the grant of lower railway rates in the off season when wagons are not required for the movement of grain, urged the abolition of the present system of prepayment of freight on coal, and also the complete abolition of the Coal Transportation Officer, considered that there should be no nominees of the Bengal Chamber of Commerce or of the Bengal National Chamber of Commerce on the Grading Board dissented from the proposal to publish the grading list and finally argued that the Indian coal trade was in need of a much larger measure of direct assistance than had been recommended by his colleagues.

The recommendations of the Committee were accepted practically in their entirety by the Government of India and the coal trade and a Grading Board, in accordance with the scheme formulated by the Committee, was established by the **Coal Grading Board Act**, (XXXI of 1925) which was passed at the September session of the Legislature. The recommendations of the Committee in regard to the grant of an enhanced rebate and of lower river dues were accepted by the railways and the Calcutta Port Commissioners, respectively, and provision was made in the Act for the grant of rebates and of preference in the matter of wagon supply so far as this required legalisation *Draft rules* under the Act were published for criticism in October, 1925. The question of protecting Indian coal against imports of foreign coal was referred to the Tariff Board in that month. The Board had not completed its investigations at the end of the year.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposit that no European ironmaste would regard as worth his serious [illegible] Early [illegible] to introduce eu[illegible] for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Baraka and Raniganj stages [illegible] east and west from the works, and for many years the day [illegible] o[illegible] ble from this form-

on [illegible] the only supply [illegible] blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the lastnamed district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonai States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Buru, a portion of Notu Buru, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at about 1 [illegible]00 feet above sea level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite, often lateritised at the outcrop. Cross-cut into the interior of the deposit show that the hæmatite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. **The Tata Iron and Steel Company** at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hæmatite, with small proportions of magnetite, in close association with granite on the one hand and granulitic rocks on the other.

MANGANESE ORE.

This industry commenced some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. India now alternates with Russia as the first manganese-producing country in the world. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing. In 1905 production reached 247,427 tons: the following year, it was more than doubled (5 1907 the figures again ro In 1909, on account of the put contracted to 642,675 regained its former positic production rose to 800,9 it fell to 670,290 tons. In 645,204 tons valued f o b £1,487,026. The ore raised vinces is of a very high grad 54 per cent. of the metal, ar its high quality is able to p freight over 500 miles of shipment charges to Europ

Record Output in 19 output of manganese ore in recorded, the total for 1925 at £ 2,617,220 f.o.b. Ind 1,014,928 tons valued at Indian ports, during 1926 put is the highest yet record for 1907 when 902,291 tons current with a rise in outp the previous year, a fall in v for 1925 being £26,863 less

This was again due to a fall in price. In 1924 first grade ore c.i.f. United Kingdom ports reached an average price of 22·9*d*. per unit. In 1925 this price fell to 21·5*d*. and in 1926 to 18*d*.

A fall in price was anticipated in view of the agreement, two or three years ago, between an American group of financiers and the Soviet Government for the development on modern lines of the manganese ores of the Caucasus; for political or economic reasons not yet fully understood no development has yet been carried out and the precise position is obscure. In addition to the four chief manganese-producing areas, India, Brazil, the Gold Coast and Cuba, a further source at Postmasburg in the northern part of the Cape Province is promising: the grade is high and the deposits extensive, the only drawback being the presence of aluminous compounds.

Exports.—The exports of manganese ore, which during 1924 fell to the extent of about 130,000 tons, decreased in 1925 by about 27,600 tons and again in 1926 by 125,300 tons. There is a steady consumption of manganese ore at the works of the three principal Indian iron and steel companies, not only for use in the steel furnaces of the Tata Iron and Steel Company, and the manufacture of ferro-manganese, but also for addition to the blast-furnace charge in the manufacture of pig-iron. The consumption of manganese ore in the industry was 40,111 tons 5,268 tons more than it was in the previous year.

GOLD.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910; the amount being 2,532 ounces, valued at Rs 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell in subsequent years until, in 1922, it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. The average earnings of the workers are very small, and the gold thus won is used locally for making jewellery.

The continuous decrease in the output of gold in India from the maximum production of 616,728 ozs. reached in 1915, continued during the year 1923, when the total output of gold was 383,697·85 ozs., valued at £1,702,042, rising in 1924 to 396,351.103 ozs., valued at £1,827,483. The recovery made by the gold mines in the Anantapur district of Madras in 1924 was a temporary one only for both the North Anantapur Gold Mines, Ltd., and the Jubital Gold Mines, Ltd., have now suspended mining operations. The small output shown against Madras represents the amount recovered by cyanide treatment of mill-tailings which have now been exhausted. In spite of an increase of 935 ozs. from the Kolar mines of Mysore therefore, there was a total decrease in the Indian output amounting to 2·476 ozs. In the Ooregam mine of the Kolar field which has reached a depth of 6,379 feet rock-bursts continue to give trouble but recent development work has proved the rich nature of the lower levels of the mine down, to the deepest point yet explored. An increase in the ore reserves of the Champion Reef mine has also been established; this mine, which has now reached a depth of 6 472 feet also suffer from rock

(a) Fine gold.

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java, and Borneo The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil-fields are found in the Irrawaddy valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and in 1886, prior to the annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil-fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, and after a fall to 31½ million gallons in 1910 it rose to 56¼ million gallons in 1912. Several of the islands off the Arakan coasts are known to contain oil deposits but their value is uncertain. About 20,000 gallons were obtained from the eastern Barongo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpyu district during 1911. Oil was struck at Minbu in 1910, the production for that year being 18,325 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1883, and from that year up till 1908 progress was slow Since that year the has been between 2¼ and 4 million gallons.

On the west, oil springs for many years to exist in th other districts in the Punja geological conditions are ad some small oil springs have attempts to develop them been successful.

Output in 1926.—Petrole that it is becoming more an maintain the output of India at the high levels it reached when peak productions of wel gallons were reached. Durin consideration the total prod less than 280½ million gallo over 289½ million gallons now little doubt that this small as it is, forms part of the inevitable decline has possible interruptions, is l slowly and steadily during t tion, unless a new field of covered. The chances of year by year as exhaustive continues to prove fruitles policy rather than one of ment seems indicated, especi national importance of th The value figure dropped s the production figure.

As before the Yenangyau Burma is mainly responsib decrease in output. In 19.. shewing an increase of nearl but this temporary arrest more than balanced by the d 21½ million gallons; in 1926 to over 14¾ million gallon 1926 is partly attributable took place during the first q and also it is thought, to several wells put out

... ..dge was over-

e ts are a little brighter. which had proved to be xp tations, decreased its million gallons; further s u have raised hopes of l v iopment. The Digboi n again showed a marked to nearly 6½ million gallons; n stigations by the Assam I a ouse expectations of a successful extension of the field and an extension of the refinery is contemplated. So far negative results only have rewarded this company's scattered tests at Dhekiajuli, Dili and Burragolai.

In the Punjab there is less cause for satisfaction. The output from the Khaur field has again dropped this time to the extent of over 1,800,000 gallons. A boring put down by the Whitehall Petroleum Corporation near Jhatla and 8 miles south-west of Talagang reached the great depth of 6 007 feet, without, unfortunately, striking oil in remunerative quantity.

...ity and value of Petroleum produced in India during 1925 and 1926.

1925.			1926.

...and Mica.—Amber is found ...tities in Burma, the output ... cwts valued at Rs. 21,420. ...n small quantities in various ...progress has been made in ... Travancore. The total ...as 25 tons. India has for ...he leading producer of mica. ... than half of the world's ... owing to the war, the ...3 189 cwts. compared with ...1913 Owing to necessary ...gard to the export of mica, ...onsiderably in the year 1915, ...nand in the United Kingdom ... ruby mica led to a consi- ...roduction during the follow

There was a decrease in the declared production of mica from 45,990 cwt. valued at Rs. 21,99,516 (£165,377) in 1925 to 41,924 cwt. valued at Rs 22,19,367 (£165,624) in 1926. But the output figures are incomplete, and a more accurate idea of the size of the industry is to be obtained from the export figures. In both the years 1925 and 1926 the quantity exported was more than double the reported production.

Tin, Copper, Silver and Lead.—The only persistent attempt to mine tin is in Burma. The output was for some time insignificant but rose in 1913 to 116 tons valued at £46,000 which fell to £38,000 in 1914. In 1925 Burma yielded ? 309 tons. Copper is found in Southern India, in Ra... and at various places along the outer Himalayas, but the ore is

smelted for the metal alone, no attempt being made to utilize the by-products. In 1924 the production of 2,035 tons of copper-matte valued at Rs. 15,94,527 was reported by the Burma Corporation, Ltd., in the Northern Shan States. There was a considerable increase in the production of tin-ore in Burma from 2,308 tons valued at Rs. 35,63,481 (£267,931) in 1925 to 3,548 tons valued at Rs. 6,101,358 (£455,362) in 1926. The Mergui and Tavoy districts contributed to some extent to this increase but most of it was due to production of 1,705 tons of mixed cassiterite-wolfram concentrates from the Mawchi Mines in the Southern Shan States. The composition of these concentrates is usually 43 per cent. wolfram to 57 per cent. cassiterite. The only Lead mine of any importance being worked in the Indian Empire is that of Bawdwin, where a very large body of high-grade lead-zinc-silver ore has now been blocked out. For many years the smelting operations of the Company were directed to recovering lead and silver from the slags left by the old Chinese miners. Those slags, however, are now practically exhausted, and the mine has reached a stage of development at which a steady output of ore is assured. The total amount of metal extracted increased from 47,275 tons of lead including 1,100 tons of antimonial lead, valued at Rs. 2,21,07,128 (£1,662,190) in 1925 to 54,330 tons of lead including 1,037 tons of antimonial lead, valued at Rs. 2,25,94,634 (£1,686,167) in 1926.

The production of silver from the Bawdwin mines of Upper Burma, which had increased to 5,287,711 oz. valued at Rs. 1,12,26,868 (£807,688) in 1924, and fallen to 4,831,548 oz. valued at Rs. 93,30,580 (£701,998) in 1925, recovered to 1,103,646 oz. valued at Rs. 88,49,722 (£660,427) in 1926.

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India, and no production was recorded until 1913. In 1914 the production was 8,553 tons, and although the output fell to 96 tons in 1915, there is a prospect of India becoming an important producer of zinc ore in the future. Important silver-lead-zinc deposits occur at Bawdwin, in Tawngpeng State one of the Northern Shan States in Upper Burma. The mines are connected with the Mandalay-Lashio Branch of the Burma railways by a narrow-gauge line 51 miles long, the lines meeting at Manhpwe, which is about 544 miles from Rangoon. They were worked for many centuries by the Chinese for silver, and have long been known to contain zinc ore; until recently, however, no serious attempt appears to have been made to market the ore for its zinc values. In 1907, the present undertaking was started by the Burma Mines, Ltd., with the idea of recovering the lead from the old slag heaps left by the Chinese, estimated at 125,000 to 160,000 tons, and later to work the deposit. Smelting operations on these slags were first carried out at Mandalay, but later the works were transferred to Namtu, about 13 miles below the mines on the narrow-gauge railway. The deposits, which comprise an area of about 2,500 acres, have now been taken over by the Burma [illegible] Ltd. and its production of zinc con[illegible] in 1926 amounted to 48,834 tons or [illegible] thrice the [illegible] produced in

1925. The exports during 1926 amounted to 43,056 tons valued at Rs. 43,03,775 (£321,177) against 20,967 tons valued at Rs. 20,79,704 (£156,375) in the preceding year.

Gem Stones.—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline, garnet, rock-crystal, agate, cornelian, jadeite and amber. Amber has already been referred to; of the rest only the ruby, sapphire and jadeite attain any considerable value in production and the export of the latter has declined owing to the disturbances in China, which is the chief purchaser of Burmese jadeite. The output of diamonds is comparatively unimportant. The output of the ruby mines in 1924 was only 101,097 carats or less than half the average annual quantity produced during the two preceding quinquennial periods. In 1922 an exceptionally valuable ruby of nearly 23 carats was found of rare size and quality. A severe decline in the output from the Mogok ruby mines of Upper Burma in 1924, followed in 1925 by a marked drop in value, bore witness to a serious decline in the industry. The Burma Ruby Mines, Limited, ultimately decided to go into liquidation and the mines were offered for sale in September, 1926. The skeleton organisation left in charge of the mines has, however, made good use of its opportunities with the result that the value of the output in 1926 (Rs. 4,66,772) exceeded that of the previous year by over a *lakh* of rupees. This encouraging result was effected by rigorous economy and an extension of a system of co-operation with local miners, and was assisted by some good finds of sapphires in the Kyaungdwin mine (the only one still worked by European methods).

Wolfram.—Owing to the continued depression in the wolfram market, Tungsten ore is now nowhere extracted except in the Tavoy district, where it occurs chiefly as a constituent of mixed concentrates. For the reason stated under "Tin" the output of Wolfrom in 1926 was almost double the amount produced in 1925. The quantity exported from India amounted to 1,562 tons valued at Rs. 21,64,223 (£161,509) in 1926 against 2,816 tons valued at Rs. 16,89,455 (£127,027) in the preceding year. The increase of export over production is probably due to the accumulation of stocks in the years previous to 1925.

Radio-active Minerals.—The General Report of the Director of the Geological Survey of India for 1913 includes a brief report by R. C. Burton on an occurrence of pitchblende at mica mines near Singar, Gaya district, Bengal. The pitchblende occurs as rounded nodules in a pegmatite that is intrusive in mica schists. Other minerals occurring in the pegmatite are mica, triplite, ilmenite, tourmaline, and uranium ochre; whitish columbite, zircon, and torbernite have also been recorded. Of these minerals triplite is stated to be the commonest.

The importance of the find of uranium oxide impregnating the triplite led to the discovery of weathered pitchblende, and as the pits were deepened the weathering became less and less until pure pitchblende was obtained. In the [illegible] from July 1913 to Fe[illegible] 1914, eighth [illegible] of pitchblende was obtained

rom Abrakhi Hill together with six tons of uranium earth debris, five to six hundred tons of triplite and two tons of tantalite. These ores were raised under a prospecting license in respect of Abrakhi Hill alone and in March 1914, a mining lease for thirty years was obtained in respect of sixty square miles of the Singar estate. The first intention was to work only the five square miles round Abrakhi and a syndicate was formed for this purpose, which on the outbreak of war, was refused a Trading License on account of the German element in it.

Labour in Mines.

The question of the labour supply presents difficulties which are not encountered in countries where mining is a special calling. The majority of the persons working at the Indian coal mines are agriculturists, and the supply of labour, as experience has recently shown, depends to a material extent on the condition of the agricultural industry. "The major portion of those employed," says a report by the Department of Statistics, "are the aboriginal Dravidians from the mountainous country of Chota Nagpur and the Central Provinces, but a large number of other castes are also employed, particularly in the outlying fields. The majority of the workmen follow the vocation of agriculture as well as mining and return to their homes during the period of sowing and reaping, the result being that at such times the output of many of the mines is greatly restricted. At the Makum collieries of the Assam Railway and Trading Company, where the labour question continues to be a very difficult one, nearly a third of the total labour force are Mekranis, Chinese, and Nepalese. The Chinese have, however, proved unsatisfactory, and it is unlikely that they will in future be recruited." With the increase in the depth of working the need for a skilled mining class will become accentuated, and if the price of coal remains at a sufficiently high level, further development in the introduction of coal-cutting plants may take place. During the period of high prices some nine years ago cutting plants were introduced in order to augment the output These worked successfully, but the cost proved to be high and as labour conditions improved the machines were discarded.

During the year 1926 the daily average number of persons working in and about the mines regulated by the Indian Mines Act was 260 113, as compared with 253,857 in the previous year This is an increase of 6,256 persons or 2.46 per cent. Of these persons 118,232 worked underground, 71,139 in open workings, and 70 742 on the surface.

The number of persons employed in coal mines was 170,628 which is 2,512 less than the number employed in 1925. Of these persons 41 770 were coal-cutters 9,378 were male loaders and 35,607 were females—chiefly loaders

Average number of persons employed daily in the Indian Coalfields during the year 1925 and 1926:—

——	Number of persons employed daily.		Output per person employed in tons.	Number of deaths by accident.	Death rate per 1 000 persons employed.

Bibliography.—Report of the Chief Inspector of Mines in India, under the Indian Mines Act (VIII of 1901) for 1927 by the Chief Inspector of [illegible] Report on the Production of India during 1927 by E. H. Pascoe, Director, Geological Survey of India. Note on the Mineral Production of Burma in 1922 Monographs on Mineral R[illegible]ces by the I[illegible] Institute.

Stock Exchanges.

There are about 446 Share and Stock Broker in **Bombay**. They carry on business in the Brokers' Hall, bought in 1899 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to fix the rates in times of emergencies. The official address of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased and it was recently sold by public auction for Rs 21,800. In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. This building was pulled down and the extension was completed last year. The present value of the card is about Rs. 7,000. The rules of the Association were revised in October 1916 and from the New Year the purchaser of shares has to pay the stamp and transfer fee instead of the seller. There are two classes of Exchange Brokers, Europeans and Indians, the latter being certified for recognition by the native Stock Exchange. Business in Government Paper and all other Trustees' Authorised Securities is carried on under the rules of the Bombay Stock Exchange, but in the street outside the hall.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street, known as the **Bombay Stock Exchange, Ltd.** This separate Exchange no longer functions older body; it was revived in 1922 It has ceased to function again

Committee of Enquiry.—In 1923 the Government of Bombay appointed a Committee to enquire into the constitution, government, customs, practices, rules, regulations and methods of business of the Native Share and Stock Brokers' Association of Bombay and to investigate any such complaints of the public and to make any such enquiries with reference to any of the aforesaid matters or any other matter appertaining to the aforesaid Association as the Committee may deem proper and thereafter with a view to protect the investing public against the interested or irregular control of business to formulate such definite proposals for the future constitution, control, direction and regulation of the aforesaid Association as the Committee may deem proper.

The Committee issued a report early in 1924 signed by all the members save one who appended a minority report. The majority report made several important recommendations for reform, notably one aimed at the prevention of corners and another for facilitating the handling of legitimate complaints against the brokers on he part of the public. The Association, however, adopted the minority report which leaves he constitution and practice of the Exchange very little modified

In the [illegible] of the year 192[illegible] there was heavy [illegible] in [illegible] mill scrips The [illegible]

was tremendously oversold, the usual crisis ensured, leading to the temporary closing of the Exchange and the suspension of all dealings and a public agitation for thorough reform arose. The brokers were at first unwilling to yield to this demand. But a threat of Government intervention and control altered their attitude. In the end, they submitted new draft rules under which wild speculation will be discouraged and the recurrence of such crisis as that indicated above will be unlikely.

For many years the **Calcutta** Share Market had its meeting place in various gullies in the business quarter and was under no control except that of established market custom. In 1908 the **Calcutta Stock Exchange Association** was formed, a building was leased in New China Bazar Street now called Royal Exchange Place, a representative committee was formed, and the existing trade customs were focussed into rules drawn up for the conduct of business. Admittance as a member of the Stock Exchange is by vote of the committee, and the entrance fee is at present Rs. 500. The market custom differs very materially from that of most other Stock Exchanges since there are no settlement days, delivery is due the second day after the contract is passed and sales of securities are effected for the most part under blank transfers. Another difference in procedure as compared with the London Stock Exchange is that there are no "Jobbers" in the Calcutta market. The Dealers who take their place, more or less, are not compelled to quote a buyer's and a seller's rate and are themselves Brokers as well as dealers, calling upon the Banks and other clients and competing with Brokers.

There are about 150 members, besides outside brokers, the former consisting of European, Jewish, Marwari, and Bengalee firms. The Marwaris predominate. The volume of *bona fide* Investment business is comparatively small and insufficient for the number of Brokers The principal business transacted on the Calcutta Stock Exchange is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, Miscellaneous industrial concerns (such as Paper Flour, Sugar). Railway and Transit Companies and Debentures, the latter comprising those of Industrial concerns and Trustees Investment Securities, namely, Municipal and Port Trust Debentures. The association has an honorary secretary and is not at present affiliated to the Bengal Chamber of Commerce

The **Madras** Stock Exchange situated at No 9 Broadway (in Tata Industrial Bank Buildings) consists of about 100 Members of which 2[illegible] are working Members. It was opened on 6th April 1920 and deals principally in Mill shares Business is regulated by rules drawn up by the Directors. There is a Board of arbitration There is an admittance membership card of Rs. 1,000 and an annual subscription of Rs. 100 The original [illegible]00 members were [illegible] by the first [illegible] and each of the working [illegible] bers have d[illegible] a [illegible] of Rs. 3,000

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhoy Currimbhoy Ibrahim a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organization. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. Mr. (now the Hon. Sir) D. E. Wacha, President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Congress resolved upon the estab[illegible] of an Associated [illegible] Chamber of [illegible] and elected a Provincial Committee [illegible] to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The following are the principal paragraphs of a Memorandum of Association and Statement of Objects of the new Associated Chamber as approved by the Congress.—

I. The name of the Chamber will be "THE ASSOCIATED INDIAN CHAMBER OF COMMERCE"

II. The Registered Office of the Chamber will be in Bombay.

III. The objects for which the Chamber is established are:—

(1) To discuss and consider questions concerning and affecting trade, commerce, manufactures and the shipping interests, at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and shipping interests of the country.

(2) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity

(3) To organize Chambers of Commerce Commercial Associations or Bodies in different trade centres of the Country

(4) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber

The Articles of Association provided "There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February," or at some other time, and "semi-annual or special meetings . . . may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary . . . "

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta, the initiative in the new activities hailing, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located." Among the objects for which the Federation is established are the following:—

(a) To promote Indian businesses in matters of inland and foreign trade [illegible] industry and manuf[illegible] and a[illegible] othe[illegible] [illegible]conom[illegible]c subjects.

(b) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business.

(c) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.

(d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of this Federation.

(e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation.

(f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.

(g) To draw, make, accept, discount execute and issue bills of exchange, promissory notes, bills of lading warrants, debentures and other negotiable or transferable instruments or securities.

The Rules provide for two classes of members *viz.*, members consisting of Chambers of Commerce (Subscription Rs. 300) and others consisting of Commercial Associations (Subscription Rs. 150).

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in their Memorandum and Articles of Association, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency; to collect and classify information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests; and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules According to the latest returns, the number of Chamber members is 1o4 and the number of Associated members is 4 Of these numbers 19 represent banking institutions, 7 shipping agencies and companies 3 firms of solicitors, 3 railway companies, 11 insurance companies, 16 engineers and contractors, 99 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs 360 and the Associate member's subscription is Rs. 300 per annum. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Department of Industries: G. L. Winterbotham, Esq.

Bombay Road Board: E. Miller Esq.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Three statements are issued once a month. One shows the quantity of exports of cotton, seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosine oil, coal, aniline dyes, sugar [illegible] wines and other sundry goods.

The third statement is headed, "Movements of Piece-Goods and Yarn by Rail," and shows the despatches of imported and local manufactured piece-goods and yarn from Bombay to other centres of trade served by the railways.

The "Weekly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tomes in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement Department with a staff of 18, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late. The certificates granted show the following details:—

(a) The date, hour and place of measurement
(b) the name of the shipper;
(c) the name of the vessel;
(d) the port of destination
(e) the number and description of packages
(f) the marks;
(g) the measurement, and in the case of goods shipped by boats;
(h) the registered number of the boat;
(i) the name of the tindal.

Certificates of weight and of origin are also issued by the Chamber.

Bombay Millowners' Association.

The Bombay Millowners' Association was established in 1875 and its objects are as follows:—

(a) To encourage friendly feeling and unanimity amongst Millowners and users of steam water and/or electric power on all subjects connected with their common good.

(b) To secure good relations between members of the Association.

(c) To promote and protect the trade, commerce and manufactures of India in general and of the cotton trade in particular.

(d) To consider questions connected with the trade, commerce and manufactures of its members.

KARACHI.

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred upon "any gentleman interested in the affairs and objects of the Chamber" subject to election by the majority of votes of members. All new members joining the Chamber pay Rs. 500 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 5 per month. The affairs of the Chamber are managed by a committee of ten members, consisting of a Chairman, Vice-Chairman and eight members, elected at the annual meeting of the Chamber as early in the year as possible. The Chamber elects a representative on the Bombay Legislative Council, three representatives on the Karachi Port Trust and two on the Karachi Municipality. There were last year 75 members of the Chamber. The following are the officers for the current year:—

Chairman—Mr F. Clayton, C.I.E., M.L.C. (Fleming, Shaw & Co.)

Vice-Chairman.—R. D. England, Esq. (Messrs. Grahams Trading Co., Ltd.).

Committee.—Messrs. R. S. Backhouse (David Sassoon & Co., Ltd.), J. E. Baxter (Mackinnon Mackenzie & Co.), P. Crawford (Shaw, Wallace & Co.), J. Morf (Volkart Bros.), W. M. Petrie (Ralli Brothers), A. G. Rice (Chartered Bank of India, Australia and China), A. L. Sleigh (North-Western Railway) and H. C. Whitehouse (Strauss & Co., Ltd.)

Representative on the Bombay Legislative Council.—Mr. F. Clayton, M.L.C.

Representatives on the Karachi Port Trust.—Mr. F. Clayton, M.L.C., Mr. E. A. Pearson & Mr. J. R. Baxter.

Representatives on the Karachi Municipality.—Mr F. R. Hawkes, O.B.E. & Mr. E. G. H. Mewburn.

Secretary.—Major Alan Duguid, A.F.C., late R.A.F.

Public Measurer.—Major Alan Duguid (Ag.)

The following are the principal ways in which the Chamber gives a special assistance to members. The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate European surveyors for the settlements of disputes "as to the quality or condition of merchandise in which both parties desire the Chamber to do so." When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hides and other merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1836. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing *per-pro* for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers-of-attorney, as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership is by ballot at a general meeting, a majority of two thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs 100 once in ten years each. The subscriptions shall not exceed Rs 300 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chambers' finances. Absentees in Europe pay no subscription [illegible] months [illegible] arily absent from [illegible] month. Honorary members [illegible] the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is "that no trade mark on ticket shall be registered on behalf of an Indian firm trading under a European name."

The following publications are issued by the Chamber:—Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 51 members and 6 Honorary Members of the Chamber in the current year and the Officers and Committee for the year are as follows:—

Chairman, Mr. C. E. Wood, M.L.C.

Vice-Chairman. Mr H. F. P. Hearson, M.L.C.

[illegible]

1 ... bers are entitled to elect representatives and the representatives elected for the year:—

Madras Legislative Council: Mr. C. E. Wood, and Mr. H. F. P. Hearson.

Madras Port Trust: Mr. G. W. Chambers, M ... B ... M ... F ... and Sir James Simpson.

Corporation of Madras: Mr. W. McMonies, Mr. A. J. Powell, and Mr. C. H. Stryker.

Federation of Chambers of Commerce of the British Empire: Sir Gordon Fraser, Kt.

Secretary. Mr. H. Waddington.

SOUTHERN INDIA.

The Southern India Chamber of Commerce has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

"To establish Museums of commercial products or organize exhibitions, either on behalf of the Chamber or in co-operation with others."

There are two classes of members, permanent and honorary. The usual conditions as to eligibility for election prevail.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1915. Members of the Chamber hold seats in the Madras Legislative Council and the Chamber has also been accorded the right of electing a representative to that body. Under the Madras City Municipal Act, 1919 the Chamber has the right of electing two Councillors to the Madras Corporation. Under the State Aid to Industries Act 1923 the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Road Board, the Town Planning Trust, the Provincial Cotton Committee, Auditors Approval Committee, Vizagapatam Harbour Works Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railway, the Madras University and the Government Institute of Commerce Advisory Council, Madras.

The Chamber has 230 members on the rolls and has its own building.

President.—Sir M. Ct. Muthia Chetty, M.L.A.

Vice-Presidents.—Dewan Bahadur Govinda Chathoorbhujadas and Mr. C. Abdul Hakim Sahib, Bahadur.

Honorary Secretaries.—C. Gopal Menon, M.L.C. and Adam Haji Mahomed Sait.

Assistant Secretary.—P. R. Nair, B.A. Com.

NORTHERN INDIA.

The Northern India Chamber of Commerce, Lahore, was inaugurated in November 1923, to watch over the mercantile interests of the hitherto practically unrepresented area of Northern India and the N. W. F. Province.

The main aims and objects of the Chamber are to promote and protect commerce and industries, to obtain the redress of any grievances and hardships under which the general mercantile community suffer, and to establish just and equitable principles of trading, etc. Among its other activities the Chamber undertakes the conduct of surveys and arbitrations, the registration of trade marks, etc.

Members are elected by ballot, the entrance fee and annual subscription for firms in Lahore being Rs. 100 and Rs. 200 respectively.

The following are the Officers, Committee etc for the year from April 1927:—

Chairman: Mr. W. R. Macpherson.

Vice-Chairman: Mr. P. H. Guest.

Committee: Messrs. D. J. Horn, Owen Roberts, D. May Arrindell, J. J. Chase, Hon'ble R. B. Ram Saran Das, Rai Bahadur L. Dhanpat Rai, H. J. Rustomji, C. F. Laborde, J. C. F. Davidson, Raha Ram, T. Munro, Sir Daya Kishan Kaul and W. Roberts.

Secretary. Mr. H. J. Martin.

Office: C. & M. Gazette Buildings, The Mall, Lahore.

UPPER INDIA.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership but subscriptions are payable as follows. A firm company or association having its place of business in Cawnpore, Rs. 300 a year; an individual member, resident or carrying on business in Cawnpore, Rs. 300; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each, at trade centres where ... bership is

sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee

The Chamber appoints arbitration Tribunals for the settlement and adjustment of disputes when invited, to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 79 members three honorary members and six affiliated members.

The following are the officers :—

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October, 1868.

The following are the members of the Chamber and has its head quarters at Cocanada, the chief port on the Coromandel Coast, north of Madras:—

Messrs. The Coromandel Co., Ltd.; Ripley & Co. Volkart Bros.; Innes & Co.; Wilson & Co. Shaw Wallace & Co.; Gordon Woodroffe & Co. (Madras). Ltd.; J. H. Vavasseur & Co. Ltd.; Best & Co. Ld.; Northern Circars Development Co.; the Agent, Imperial Bank of India.

MEMBERS OF THE COMMITTEE.

Mr. J. Leask (Chairman).

" C. D. Shores.

" S. A. Cheesman.

The rules of the Chamber provide "that by the term 'member' be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada, or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly electing according to the Rules of the Chamber, and that all such be eligible, but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, are elected by ballot at the general meeting in January in each year, for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 25. The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum, payable quarterly and for each member whose place of business is elsewhere is Rs. 60 per annum, payable in advance. Committee meetings are held on the 1st Tuesday in the month and general meetings on the 3rd Tuesday or when ordered.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

CEYLON.

The Ceylon Chamber of Commerce was established on the 25th March 1839 and was incorporated in 1895, with its headquarters at Colombo. All firms and persons engaged in the general trade of Ceylon are admissible as members and every person or firm desirous of joining the Chamber must after having furnished one month's notice of their intention to apply for membership be proposed by one member, seconded by another and balloted for by the whole Chamber. The affairs of the Chamber are conducted by a Board of Directors consisting of Chairman and Vice-Chairman and 10 members.

The following is the membership of the Board at the present time:—

Mr. J. J. Wall (*Chairman*), Mr. C. H. Figg (*Vice-Chairman*), Sir Edwin Hayward, Mr. S. P. Hayley, Mr. H. G. P. Maddocks, Mr. R. Skrine, Mr. F. E. Joliffe, Mr. T. M. Caldwell, Mr. George Brown, Mr. C. A. Pearcy, Mr. T. H. Tatham, and Hon'ble Mr. C. S. Burns.

Secretary.—Mr. C. F. Whitaker.

Representative in the Legislative Council.—Hon'ble Mr. C. S. Burns.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta, the headquarters of the Director-General. It embraces two distinct [illegible] of work (a) the collection and diss[illegible] of [illegible] co[illegible] with overseas trade which may be of use to Indian firms, and (b) the compilation and publication of All-India statistics. The latter are published in a series of volumes of which the most important are the Sea-borne Trade Accounts, Monthly and Annual, Statistical Abstract, Agricultural [illegible] (in two volumes) and the Review of Trade. The department

also publishes a weekly journal—"The Indian Trade Journal"—the principal features of which are (*a*) information as to tariff changes in foreign countries which affect Indian interests, (*b*) notices of tenders called for and contracts placed by Government departments and public bodies, (*c*) crop reports and forecasts, (*d*) Government orders, communiques and other notifications affecting trade, (*e*) analysis of Indian trade statistics, (*f*) market reports, prices and trade movements of the staple exports and imports, (*g*) trade enquiries for securing trade introductions, (*h*) summaries of the leading features of consular and other trade reports, and (*i*) abstracts of the proceedings of the various Chambers of Commerce in India.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 11,000 volumes as well as Indian and foreign statistical publications, and over 400 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value, throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioner in London, with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

The British Trade Commissioners in India are part of the world-wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world; by disseminating it to British manufacturers and exporters; by undertaking such special constructive activities as may be found possible; and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is the policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world, who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Mr. T. M. Ainscough, O.B.E., was appointed His Majesty's Senior Trade Commissioner in India in January 1918 and opened an office in Calcutta in May of that year For five owing to the pressing need for in the Public Service, he was in covering this vast territory. In 1923, however, two additional Trade Commissioners were appointed to India. Mr. W. D. M. Clarke was posted to the Calcutta office and Major R. W. Clarke opened an office in Bombay at Exchange Buildings Sprott Road, Ballard Estate. The territory is now divided between the Calcutta and Bombay posts and this development allows the Senior Officer to travel almost continuously to any part of India which may call for his attention and to devote his time to some of the broader politico economic problems which are becoming so important in view of the changing political conditions in India.

Functions of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area; to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers; to visit the principal commercial centres; to report upon foreign competition, on financial and trade conditions. and new legislation affecting trade to make an annual report on the tions and of trade in his area and to special reports and plus on

pa a u i n w a ik y o in erest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department, to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area, and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturing engineers is maintained in Calcutta and Bombay and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will cooperate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

For many years British traders have deplored the fact that there have not been available officials with commercial experience who could help them in voicing their difficulties and in meeting foreign competition. As a rule these complaints eulogized the Consuls of other countries and invited the attention of Government to their many virtues. In response to this agitation the greatest care has been taken by the British Government to select, as their trade officers Overseas, men of sound commercial training and experience who have acquired some ua n n a r p c p e , a d a comprehensive and businesslike organization has been built up at the [illegible] Trade, London, to deal [illegible] sent home. It now rest [illegible] cantile community, both at home and also Overseas, to co-operate freely and frankly with the Trade Commissioners and to recognize the work they are doing in the Imperial interest by assisting them with such information and particulars with regard to foreign competing goods, conditions of trade, etc., as they are able to afford

H. M.'S TRADE COMMISSIONERS IN INDIA

Imperial Trade Correspondent,

The Principal Collector of Customs Colombo.

INDIAN COTTON DUTIES ACT.

The origin of this fiscal measure dates back to 1894 when the embarrassment caused to the finances of India by the fall in exchange drove the Government of India to the necessity of adopting measures to increase their sources of revenue. Among these measures was the reimposition of the Customs Tariff which had been in force prior to 1882 subject, however, to this difference that cotton yarns and fabrics, which had formerly been subjected to an import duty, were in 1894, excluded from the list of dutiable articles. This p [illegible] import duties had been [illegible] erschell Commission whic [illegible] on the currency questio [illegible] method o adding to the revenue as being the east kely to excite o [illegible] In point o fact, however this reco [illegible] which was [illegible] into the effect in the Indian Tariff Act of March 1894 gave rise to very marked opposition. In support of their policy the Government appealed to the Resolutions passed in 1877 and reaffirmed in 1879 by the House of Commons, the first of which had condemned the levy of import duties on cotton fabrics imported into India as "being contrary to sound commercial policy," while the latter called upon the Government of India to effect "the complete abolition of these duties as being unjust alike to the Indian consumer and to the English producer." It was, however, an open secret that the decision to exclude from the list of dutiable articles cotton yarns and fabrics was not the decision of the Govern[illegible]t of India but that of the Secretary of [illegible] It was pertinently pointed out that [illegible] of trade in cotton [illegible] and

yarns then represented nearly one-half of the total imports from abroad, and that the exemption of these important commodities when practically every single other commodity was being subjected to an import duty could not be justified on its merits as a sound fiscal measure, much less when it was an admitted fact that the Budget would still show a deficit.

Excise Duties Imposed.—The opposition to this measure, though it failed to secure its rejection in the Legislative Council, was strong enough to induce the Secretary of State to reconsider the matter. Yielding to the united representations of the Government of India and of Indian public opinion, His Majesty's Government eventually agreed to the re-imposition of import duties on cotton yarns and fabrics provided that it could be shown that such a measure was necessitated by the position of Indian finances, and that it was combined with an Excise duty which would deprive the import tax of any protective character. Accordingly in December 1894, consequent on the further deterioration in the financial position, two bills were introduced in the Legislative Council. The first of these subjected cotton yarns and fabrics to the general import duty of 5 per cent. *ad valorem.* The second imposed an Excise duty on all cotton yarns of 20's and above produced by Mills in British India. In introducing this latter Bill the then Finance Minister, Sir James Westland, was careful to explain that the policy underlying its provisions had been imposed on the Government of India by the Secretary of State in pursuance of the Resolution of the House of Commons quoted above. The provisions of this particular Bill are of little interest. From the first it was recognised that they were unpractical, Lancashire and Indian spinners disagreed as to the point at which the line should be drawn exempting Indian yarns from the Excise Duty. Practical difficulties were pointed out by Indian spinners as to the impossibility of spinning precisely to a particular count. From the Lancashire point of view it was contended that the Bill offered facilities for evasion while it was admitted that under the system adopted in the Bill, the taxation of Indian and Lancashire products was not being carried out on a similar basis.

Act of 1896—The Act was in fact doomed to be short-lived, and in December 1895 the Government of India were compelled to reconsider the whole position and to introduce an entirely new measure which became law in January 1896 as the Indian Cotton Duties Act II of 1896. This measure proceeded from two conclusions, namely, that no attempt should be made to obtain any duty from yarns whether imported or locally manufactured, and that an equal rate of duty should be applied to all woven goods whether imported or of Indian origin. With the object of conciliating the opposition, the rate of duty was fixed at 3½ per cent. as opposed to the general rate of Customs duty of 5 per cent. The main provisions of the Act provided that the assessment for the purposes of collecting the Excise duty should be based on returns submitted by the mill-owners; and that provision should be made for a rebate in the case of woven goods exported out of India. No centro beyond a requirement that ... should be furnished was attempted

in respect of spinning mills. On the other hand certain concessions in the matter of import duty on Mill stores were made by executive order so as to place Indian Mills on a footing more or less equal to their Lancashire competitors.

Criticisms of the Measure.—It is not possible within the limits of the present article to do more than summarise the criticisms with which this measure was received in India. Much of the opposition was based on grounds of a transient character; as for instance that the Indian industry was then in a state of continued depression and that it had been hard hit, particularly in respect of its export trade, by the currency legislation, and by the uncertainty as to the fiscal policy of Government. In some quarters objection was offered to the exemption of yarn, which was shown, would place the Indian hand weaving industry at an advantage with the Indian power weaving industry But the hostility to this measure, as also to the earlier measures already described, clearly proceeded from the feeling that the policy of the Government of India and of the Secretary of State had been dictated by Lancashire, and that the action of Lancashire was due not so much to the fact that there was any real competition between Indian and Manchester goods but to a desire to handicap the Indian industry whose progress was already causing uneasiness to Lancashire interests. It was argued that the imports from Lancashire were practically all of the higher counts, which, for climatic and other reasons, Indian mills could not produce that in any case the advantage to the Indian millowner of the import duty was inconsiderable and was counterbalanced by certain draw backs, arising from the inferiority of Indian labour, which could not be overcome; and that this advantage, such as it was, could scarcely be said to have a protective character, in view of the higher cost of initial equipment in the case of an Indian mill which has to import its machinery, and of working expenses consequent on the scarcity of skilled labour and on the necessity of importing stores required in the production of cloth. Finally, from the standpoint of the consumer, very severe criticism was directed against the reduction, in favour of imported cotton goods, of the general rate of duty from 5 per cent. to 3½ per cent. on the ground that the effect of the legislation would relieve the richer classes who were consumers of the finer Manchester fabrics and impose new taxation on the poorer classes whose requirements were met by the Indian mills.

Later Factors in the Situation.—Since the passing of this measure into law the policy of the Government of India in this respect has frequently been the subject of attack in the press and in the Legislatures in India, while it has also formed the subject of continued representations by the industrial interests affected and political organizations. In more recent years the agitation in favour of the abolition of the Excise duties was revived by the growth in England of a strong body of public opinion in opposition to the policy of Free Trade. Advantage was taken of this new phase in English ... to thought to press on ... of India the acce... of a policy of ... now adopted by the Government of India in the

to end of this irritating use of the current necessarily high important tariff for fostering Indian industries—and the removal of the Excise duties was claimed by the opponents of this measure as a necessary corollary of the application to the British Empire of the principles associated with the name of Mr. Chamberlain. A new factor in the situation which strengthened the position of those who were in opposition to the Excise duties was to be found in the severe competition which Indian mills have to face in China as well as in India from the Japanese industry. The Japanese market was lost to India in the early years of this century. More recently, however, Japan has entered as a competitor with India into the China market, while within the last few years it has pushed its advantage as against the Indian millowner in the Indian market itself.

Policy of 1917.—The policy of Government towards the Cotton Duties underwent a further development in 1917. In the budget of that year provision was made for interest and sinking fund charges on £ 100 millions, the contribution of India towards the cost of the war. This demanded in addition to the natural increase in the revenues fresh taxation to the extent of £ 3 millions per annum. Amongst the expedients adopted to produce this revenue was the raising of the import duty on cotton goods from 3½ per cent. to 7½ per cent. which is the general tariff rate. At the same time the cotton excise duty was fixed to remain at the previous figure of 3½ per cent. thus giving the indigenous industry a slight protection to the extent of 4 per cent. The question of the abolition of the Excise entirely had to be dismissed from consideration in view of the demands upon the exchequer, as it was estimated to produce in 1917-18 £ 320,000. By means of the increase in the tariff on Cotton Duties the Finance Member estimated to produce an additional £ 1 million per annum. The proposal was received with immense satisfaction in India as a step towards the righting of what is almost everywhere regarded as a reverse economic wrong. It aroused very vehement protests in Lancashire where the cotton industry organised its political vote and brought great pressure to bear upon the Secretary of State to withdraw the measure. Mr. Austen Chamberlain, the then Secretary of State for India, stood firm and with the Government at his back refused to budge an inch from the position which he had taken up in supporting the Government of India in this matter. There were anxious moments in the House of Commons when the Labour Party joining with the Irish Nationalists and the Lancashire vote mobilised its forces against the Government especially as the attitude of Mr. Asquith and his following was obscure. In the end Mr. Asquith gave his support to the Government policy on the understanding that this, in common with all other fiscal issues, would be reconsidered at the end of the war. With this support, the Bill was carried through the House of Commons by a large majority.

The Recent Position.—The question has frequently come under [illegible] in the Indian Legislature during the past few years and the new political constitution alters its [illegible] there inasmuch as it subjects taxation not merely to debate but to the actual votes of both Council of State and Legislative Assembly. The latter house paid most attention to the Excise and both the annual Budgets and the right of unofficial members to move Resolutions afforded opportunities for pressing the popular view upon Government. During the life of the first Assembly—1921-1923, inclusive—the position was still dominated by the financial difficulties of Government and the necessity for utilising every possible source of income for meeting successive deficits.

Excise Duty Suspended.—In November 1925 two months after further pressure from the Legislative Assembly, which Government at the time indicated that they would regard as decisive so far as public opinion on the question of the rival claims reduction of provincial contributions and abolition of the Excise Duty was concerned an Ordinance to suspend levy and the collection of the Cotton Excise Duty was issued. That Ordinance stated that the duty would not be levied and collected or assessed on any cotton goods produced in any mill in British India on or after December 1 1925, and before March 1, 1926. At the same time a statement was issued by the Governor-General explaining the reasons which led him in exercise of the powers conferred upon him by the Government of India Act, to promulgate that Ordinance. The statement was as follows:—"In August last when replying to a deputation which waited upon me on behalf of the millowners of Bombay and Ahmedabad to urge the relief of the mill-industry from the cotton excise duty I affirmed the Government of India stood by the letter and the spirit of the pledge given by my predecessor, Lord Hardinge, that the excise duty would be abolished as soon as financial considerations permitted. At the same time while fully recognising the special difficulties, with which the cotton mill industry in India was faced, it was necessary for me to explain that it was impossible to grant this request in the middle of the financial year before the year had fully declared itself and before the commitments and the prospects of next year were known.

"Again, on the 16th September 1925 when a motion for suspension of the collection of the cotton excise duty was debated in the Legislative Assembly it was made clear on behalf of Government that suspension must inevitably be followed immediately by abolition and that abolition ought to be considered only in connection with the finances of the year as a whole, that is at the time of the budget when the claims of the cotton mill industry could be balanced against rival claims. It was definitely stated that a vote for suspension would be taken by Government as an expression of the view that the abolition of the cotton excise duty should take precedence of other claims. The Assembly accepted by a large majority the motion for suspension.

"The time has not yet come when a detailed estimate of the revenue and expenditure of the current year [illegible] o the prospects fo 1926-27 can be made, but the final results of the [illegible] n are now known and it is possible to make a

more reliable estimate of the financial position than in September. On such information as is now before them, the Government of India are satisfied that there would be no serious risk of a large deficit in the current year if the cotton excise duty were suspended for the rest of the year and that there is a reasonable prospect that the budget for next year can be balanced without assistance from the cotton excise duty in the absence of any big change for the worse in the next few months.

I and my Government have, therefore, come to the conclusion that the moment has arrived when financial considerations permit of the abolition of the duty. This can, however, be finally accomplished only by the passage of the necessary legislation by the Indian Legislature."

"In the meanwhile having regard to the emergency caused by the grave difficulties confronting the industry, to the pledge given and reaffirmed and to the expressed views of the Legislative Assembly, I have decided that with effect from the 1st December 1925 the duty shall be suspended by Ordinance. It is the intention of my Government, unless the financial position as disclosed in the budget estimates for next year substantially fails to confirm present anticipations, to place before the legislature at the time of the budget proposals for the abolition of the duty."

The duty, having thus been suspended till the end of the financial year, 1925-26, was finally abolished in the Budget & Finance Bill for 1926-27 passed by the Legislature in March 1926.

The statistics of yarn and cloth production previously maintained under the Cotton Duties Act are still compulsory under the authority of Act XX of 1916 (The Cotton Industry Statistics Act.)

THE INDIAN CENTRAL COTTON COMMITTEE.

The Indian Cotton Committee of 1917-18, a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922, reviewed the position of cotton-growing in India very thoroughly and made a series of recommendations for the improvement of cotton-growing and marketing which have proved to be of the greatest value. One of their recommendations was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton-growing industry generally, to advise the Government of India and Local Governments in regard to matters of cotton policy especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921 and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton. The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows.—

President.—The Agricultural Adviser to the Government of India *ex-officio* (Dr. D. Clouston, C.I.E.).

Representatives of Agricultural Departments.—Mr. R. D. Anstead, C.I.E. Director of Agriculture, Madras; Dr. H. H. Mann, Director of Agriculture Bombay; Mr. G. Clarke, C.I.E. Director of Agriculture, United Provinces. Mr. D. Milne, C.I.E., Director of Agriculture, Punjab; Mr. F. J. Plymen, Director of Agriculture, Central Provinces; Mr. H. F. Robertson, Deputy Director of Agriculture, Burma.

The [illegible] of Commercial Intelligence and [illegible] *ex-Officio* Dr. D. B. Meek, O.B.E.

Representatives of Chambers of Commerce and Associations.—Mr. W. Ellis Jones, (Vice President) East India Cotton Association Sir J. A. Kay, M.L.C., Bombay Chamber of Commerce; Mr. S. D. Saklatvala, Bombay Millowners' Association; Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E., M.L.A., The Indian Merchants' Chamber, Mr G. C. R. Coleridge Karachi Chamber of Commerce, Seth Kasturbhai Lalbhai, M.L.A., Ahmedabad Millowners' Association; Mr. G. Z. Meli, Tuticorin Chamber of Commerce, Mr. H. Wilkinson Upper India Chamber of Commerce; Mr W. Roberts, Empire Cotton Growing Corporation.

Commercial representatives nominated by Local Governments.—Sir S. B. Mehta, Kt., C.I.E. Rao Bahadur K. J. Deshmukh, Central Provinces; Mr. H. F. P. Hearson, Madras Rai Bahadur Seth Prabhu Dayal, M.B.E., Punjab Mr. B. K. Lahiri, Bengal.

Co-operative Representative.—Rao Saheb V. Krishna Menon.

Representatives of Cotton Growers.—M.R. Ry. R. Appaswamy Naidu Garu, M. R. Ry. B. P. Sesha Reddi Garu, Madras, Rao Bahadur Bhimbhai Ranchodji Naik, Mr. Bakshi Darshansingh, Bombay; Kunwar Bikram Singh Rai Saheb M. Amba Prasad, M.L.C., United Provinces; Sardar Ujjal Singh, Capt. L. H. G. Couville. Punjab; Rao Bahadur M. G. Deshpande, M. M. P. Kolhe, M. L. C., Central Provinces and Berar.

Representatives of Indian States.—Mr. B. A. Collins, C.I.E., I.C.S. Director General of Industries and Commerce, Hyderabad State Mr M. B. Nanavati, Director of Commerce and Industries, Baroda State; Mr. H. H. Pandya Administrative Officer, Department of Agriculture, Gwalior Gwalior State · Mr A. Howard, C.I.E [illegible] Institute of Plant [illegible] Indore, [illegible] and [illegible] India

Additional persons nominated by the Governor-General in Council.—Mr. C. R. Palairet, Representative of the Indore State; Mr. W. Youngman, Economic Botanist to Government, Central Provinces; Rao Saheb Bhimbhai M. Desai, Deputy Director of Agriculture Gujerat; Mr. G. R. Hilson, Cotton Specialist, Madras; Mr. G. H. Krumbiegal, Director of Agriculture, Mysore State.

Secretary.—Mr. B. C. Burt, B.Sc., M.B.E., I.A.S.

Deputy Secretary.—Mr. W. J. Jenkins, M.A., B.Sc., I.A.S. (Mr. J. H. Ritchie, I.A.S., Offg.)

Director, Technological Laboratory.—Mr. A. James Turner, M.A., B.Sc.

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which, by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes, were reducing the returns of the grower and causing great economic loss to the country at large.

The **Cotton Transport Act** passed in 1923 enables any Local Government, with the consent of its legislative, to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration, and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and of the Baroda, Rajpipla and Holkar States and with excellent results.

More recently the **Cotton Ginning and Pressing Factories Act** (XII of 1925) has been passed which provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enable them to trace to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses, and should lead to a very marked improvement in the quality of Indian cottons.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale and has carried out some important enquiries into the financing of the cotton crop up-country and primary cotton marketing. As an instance of the progress in cotton-growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of about 1" staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the cotton trade and of the cotton-growing industry; thus enabling a number of problems to be tackled from every point of view and definite progress made towards their solution.

Research.—By means of the cotton cess the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped Technological Laboratory which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons, thus providing a much-needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which approaches the subject primarily from the standpoint of the grower.

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied.

In addition by means of grants-in-aid to Agricultural Departments it has provided for special investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton-growing provinces and now number fourteen.

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the out-come of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, *viz.*, The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Muccadums' Association Ltd. and The Japanese [illegible] None of these [illegible] were [illegible] ve of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919 which continued to [illegible] n until May 1922, when the Act under which the Board

worked was repealed and its functions were carried on by the newly constituted East India Cotton Association who were granted a charter by Act No. XIV of 1922. Since then the Association, subject to its By-laws being passed by Government, have controlled the Cotton Trade of Bombay.

The present constitution of the Board is as follows:—Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E., M.L.A., President, Importers' Panel; Haridas Madhavdas, Esq., Vice-President, Exporters' Panel; The Hon'ble Mr. Ratansey D. Morarji, F. F. Stileman, Esq., Lalji Naranji, Esq., M.L.C., Millowners' Panel; H. T. Hobbs, Esq., G. Boyagis, Esq., Exporters' Panel; K. H. McCormack, Esq., Slaychandrai Jhunjhunwala, Esq., Importers' Panel; Beniprasad Dalmia, Esq., W. C. McKee, Esq., Commission Agents' and Merchants' Panel. Jamnadas Ramdas, Esq., Bhaidas Nanalal, Esq., Tethawalias' Panel; Major W. Ellis Jones, Anandilal Podar, Esq., Jaghivan Ujamshi, Esq., Brokers' Panel.

Officers.

D. Mehta, Esq., B.A., Secretary, F. F. Wadeson, Esq., J.P., Manager, Clearing House, C. M. Parikh, Esq., B. Com., Assistant Secretary.

Some of the objects for which the Association is established are:—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade, to establish just and equitable principles in the said Trade; to maintain uniformity of control of the said trade; to fix or adopt standards of classification of cotton to acquire, preserve and disseminate useful information connected with the Cotton interest throughout all markets to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. T[illegible] regulate the [illegible] of Cotton from India a[illegible] Cotton into India in so [illegible] [illegible]nted. To bring, prosecute, or defend, or aid in bringing prosecuting, or defending any suits, actions proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has erected a fine Exchang[e] Building at Sewri Cotton Depot, containing 112 Buyers' Rooms and 91 Sellers' Rooms and a large Trading Hall on the lines of Liverpool and New York Exchanges.

The inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslie Wilson, Governor of Bombay on the 1st December 1925 in the presence of a large gathering which included most of the prominent business men of the City and many leading citizens.

There is a membership of 460 members

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in November and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as *white wool*, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

The exports of Indian [illegible] began to assume [illegible] with the [illegible] of the sea route [illegible] They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales, but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The [illegible] was an u[illegible]

dented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available 1925-26 the total area in all the territories reported on was computed at 27,960,000 acres which is 1,469,000 acres or 4 per cent. above the revised figures of last year. The total estimated outturn was 6,038,000 bales of 400 lbs. which is 1 per cent. below the yield of last year.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop:—

Provinces and States.	1926-27. (Provisional estimates.) Area.	Yield.
	(1,000 acres.)	(1,000 bales.) †
Bombay (a)	6,768	1,267
Central Provinces and Berar	4,982	900
Madras (b)	2,260	379
Punjab (b)	2,709	598
United Provinces (b)	807	257
Burma	438	23
Bihar and Orissa	79	14
Bengal (b)	165	16
Ajmer-Merwara	43	61
Assam	46	15
North-West Frontier Province	29	5
Delhi	4	1
Hyderabad	3,267	808
Central India	1,298	222
Baroda	701	124
Gwalior	649	107
Rajputana	514	81
Mysore	97	25
Total	25,006	4,952

The distribution of the export trade is indicated in the appended table.

Exports of Cotton.—A portion of the Indian crops of the season 1924-25 and a portion of the crop of the season 1925-26 came into the statistical consideration in the exports during the year 1925-26. The exports amounted to nearly 12 million cwts. valued at Rs. 91 crores, against 13½ million cwts. valued at Rs. 98 crores in 1923-24. This represents 47 per cent. of the total value of raw materials exported from India and 24 per cent. of the total exports. The exports showed a decrease of 12 per cent. in quantity and 7 per cent. in value. The average declared value per cwt. rose from Rs 73 to 77 or by 5 per cent. whereas the total decrease was Rs. 7 crores. The principal purchasers of Indian cotton are Japan and China which together took 59 per cent. of the total export during 1924-25. Besides these, Germany, Belgium, the United Kingdom, Italy, and France who are large consumers of Indian raw cotton, had 5, 6, 5, 14 and 4 per cent., respectively.

—	Exports of Raw Cotton. 1923-24. Cwts.	1924-25. Cwts.	1925-26. Cwts.

* Against [illegible]5,025,070 shown in February 192[illegible]-25. † Bales of 400 lbs each.

Bombay is the great centre of the cotton trade. The principal varieties are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, *from the Central Provinces*, has a *good reputation*. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatores and Tinnevellys. The best of these is Tinnevelly. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, *hybridization and the importation of exotic* cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to leaven the whole outturn, which still consi part of a short-staple early m *suitable to soils where the rainy*

Reference has been made to *of the Indian handloom cloths* days of which we have reco grew so large that it excited al and it was killed by a series commencing in 1701, prohibit sale of Indian calicoes in En vention of the spinning jenny loom and their development in I ed India from an exporting m country, and made her depende Kingdom *for the bulk* of her p first attempt to establish a cot was in 1838, but the foundation *were really laid by the opening* in Bombay in 1856. Therea sional set backs from famine, p causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts s for the twelve months April to March, in each of the past three years:—

Foreign Territory.		
Indian States of Indore, Mysore, Baroda, *Nandgaon, Bhavnagar, Hyderabad,* Wadhwan, Gwalior (Ujjain) and Pondicherry (*a*)..	58,228,301	63,056,608
Grand Total ..	719,389,994	686,427,479

(*a*) Including the production of one mill only.
(*b*) Represents production during the 4 months April to July 1926 only, *closed from August 1926*.
† Includes 740,256 lbs. for which details are not available.
* Includes 64,285 lbs.
Note: The cotton mills in Burma started work in May 1923.

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 74 pe cent. of the quantity produced in India. The United Provinces of Agra and Oudh and Madras produced about 7 per cent. respectively while Bengal Provinces 4·7 and 5·2 where the is as yet

Bombay Island.

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay island :—

* The Cotton Duties Act was abolished in April 1926

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-looms.—The pioneer's example was followed by Mr. George Henderson of that silk and firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Manufacturing Co., Ld." Four other mills followed in succession—Gourpore, Serajgunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined [illegible] y and [illegible] the total o their looms up to 1,250 To ill [illegible] the p[illegible]perity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster, Budge Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Belliaghatta-Barnagore branch mill) Rustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs. Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatty, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gourpore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—the Gordon Twist Mill with 1,800 spindles (now acquired by Anglo India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajgunge), and the Kinnison. A lull of four years witnessed large extensions to the existing mills, after which came the following series of new mills, besides further heavy extensions—Dalhousie, Ale[illegible] Naihati, La[illegible]ce, Belvedere, A[illegible] Ke[illegible]vin and Northbrook

Progress of the Industry.

The record of the jute industry may well be said to be one of uninterru following statement shews **quinquennial averages** from the earliest year information is available with actuals for each year from 1917-18 up to 19 in brackets represent the variations for each period, taking the average from 1879-80 to 1883-84 as 100 :—

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that in spite of the constant opening up of new markets, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are:—
Chairman.—Mr. G. T. Rose.
Members of Committee.—Mr. C. G. Cooper, M.L.C., Mr. R. B. Laird, M.L.C., Mr. M. P. Thomas and Mr. T. Douglas.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion, backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Mr J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

An Association, styled the **Calcutta Jute Dealers Association**, has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute mill in and [illegible] d [illegible] The present Committee Mr. Geo Morgan, M.L.C. *Chairman*. Members:—Messrs. D. King, C. S. Taylor E. W. Christie, J. L. Ruthven, H. M. Sherman.

Effects of the War.—The official review of the Trade of India in 1916-17 says:—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,629 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent. above that of the previous year, *viz.*, 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent. below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly *via* Dunkirk), Russia (*via* Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which took more than 27 per cent. in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures.—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 241 lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, sand bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 41,292 looms and 863,339 spindles. The number of persons employed was 285,881. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1922-23 declined from 386 million bags to 342 million bags, but the value increased from Rs. 13,87 lakhs to Rs. 15 82 lakhs. Shipments of gunny cloth rose from 1,120 million yards to 1,251 million yards valued at Rs. 15,92 lakhs and Rs. 24,24 lakhs respectively.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the **Deccan hemp** plant (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the [illegible] of retting was 10 ft to 12 ft long, of an exceptionally light colour well [illegible] and of good strength

18 per ton with Limlipatam id Bengal first mark jute at ean hemp has been grown in Bombay, the Central lras, where it is used for ropes iso for the manufacture of a valuable feature of the lity for cultivation in such e not suitable for jute.

, the United Kingdom's re- ip were mainly supplied by ... ia, ... p- t the effect of the war will be iderable changes in the cha- market. There will probably s, it is thought, in the prepa-

ration of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held; but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year The quantity advanced by 37 per cent. from 197,412 cwts. to 269,487 cwts. and the value from Rs. 26·93 lakhs to Rs. 36 68 lakhs.

THE WOOL INDUSTRY.

rom India consists not only ndia itself, but of imports s, these latter coming into l and by sea. Imports by from Persia, but a certain a also comes by land, while are from Afghanistan, Cen- nd Nepal. Quetta, Shikar- Multan are the main col- wool received by land from rsia, whence it is almost to Karachi for subsequent

Exports.—A considerable imported annually from al years, from Afghanistan in 1926-27 were valued at woollen yarns and manu- 7 lakhs. Exports in the ued at Rs. 393 lakhs (raw lakhs (woollen yarn and

India.—The production estimated at 60 million lbs. rrived at from the available er of sheep in the country yield per fleece, the average elded per sheep per annum 2 lbs.

are classed in the grade id it is correct to say of per- reeds of sheep found on the they yield a kind of hair They are reared chiefly on on, and the fleece has been as of subsidiary interest in actual fact, the Indian imate more nearly to the e goat rather than of the rks in his manual on heep, particularly with r- type, that they "resem- h tucked up belly, having form, the feet light, the t and the tail short."

ure.—The number of k in British India in 1902 an authorised capital of ploying 23,800 spindles and mber of persons employed was 2,559, and the quantity oduced 7,148,000 lbs. At

the end of 1917 the number of mills had risen to five, with an authorised capital of Rs. 2,56,50,000 employing 30,608 spindles and 1,155 looms The weight of goods produced then was 9,744,264 lbs. and the number of persons employed 7,824. With regard to Indian States, there was one mill in Mysore in 1903 with a capital of Rs. 6,00,000, employing 1,430 spindles and 45 looms. The quantity of goods produced was 1,138,000 lbs. and the number of persons employed 297. In 1907 there was still only the one mill working in an Indian State—the authorised capital had been increased to Rs. 15,00,000, the quantity of goods produced to 1,724,087 lbs, and the number of persons employed to 563. Three of the mills manufacture all classes of woollen and worsted goods, the remainder manufacturing blankets only. The existence of these mills in India proved of great service to Government in the meeting of war requirements, and they were all employed to their fullest capacity in supplying army demands for greatcoat cloth, serges, putties, flannels, blankets and hosiery. Their total capacity, however, was not sufficient to meet the full requirements of the army, and consequently their supplies had to be supplemented by large imports from home. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J K Mehta, Gov't Press (C) 1919.

Silk.

In the early days of the East India Company e Indian Silk trade prospered greatly, and rious sub-tropical races of the Silkworm re introduced. But the trade gradually clined for the following reasons:—

In the seventeenth and eighteenth centuries dia s chief competitor in the silk trade was e Levant Company. Successful efforts, how- er, were made to acclimatise in Europe one two races of a temperate worm, procured om China and Japan. When sericulture came part of the agriculture of France and aly a quality of silk was produced entirely fferent from that of India and Turkey, and appearance created a new demand and ganized new markets.

All subsequent experience seems to have tablished the belief that the plains of India, at all events of Bengal, are never likely to oduce silk that could compete with this new dustry. On the lower hills of Northern India, the other hand, a fair amount of success has en attained with this (to India) new worm, , for example, in Dehra Dun and Kashmir. Manipur, it would appear probable that *ombyx mori*, possibly obtained from China, as been reared for centuries. The caprice of shion has, from time to time, powerfully odified the Indian silk trade. The special roperties of the *korah* silk were formerly much ppreciated but the demand for them has now eclined. This circumstance, together with efective systems of rearing and of hand- eling and weaving, accounts largely for the resent depression in the mulberry silk trade f India.

Mulberry-feeding worms.—Sir George Watt states that in no other country does the ecessity exist so pressingly as in India to treat he subject of silk and the silk industries under wo sections, *viz.*, Bombycidae, the domesticated r mulberry-feeding silk worms; and Saturniidae, he wild or non-mulberry-feeding worms. In ndia the mulberry worm (Bombyx Mori) has een systematically reared for many centuries, here being six chief forms of it. In the tem- erate tracts of India various forms of *Morus lba*, (the mulberry of the European silk-pro- ucing countries), are grown specially as food or the silkworm. This is the case in many arts of the plains of Northern India, Baluchis- an, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The ther species even more largely grown for the ndian silkworm is *M. Indica* of which there re many distinctive varieties or races. This s the most common mulberry of Bengal and Assam as also of the Nilgiri hills.

India has three well-known purely indigenous silkworms; the *tasar*, the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially those of the great central table- and, and feeds on several jungle trees. The econd is confined to Assam and Eastern Bengal, nd feeds on a laurel. The third exists in a [illegible] reared on [illegible] of view [illegible] attrac- ive and the cocoon can be reeled readily. The [illegible] silk, on the other hand, is so [illegible] ly difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous ex periments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and *parasites* among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross breds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machi- nery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs. 3,000 a year to the Tata farm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieut- Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government made a grant of Rs. 2,000 towards the expenses. Sir Dorabji Tata has also made a donation of Rs. 1,000. The Bengal Silk Committee under the guidance of some French experts have con ducted cross-breeding experiments with a view to establish a multi-voltine hybrid of European quality. There is a Government sericultural farm at Berhampore, where, it is said, a pure white multi-voltine of silk worm is reared The results of the Bengal Committee's labours may be summed up as follows: the *only really* effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to esta- blish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a *Bulletin* (No. 48 of 1915) entitled "First Report on the Experiments carried out at Pusa to improve the Mulberry Silk Industry." In a short Prefatory note Mr. Bainbrigge Fletcher Imperial

logist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa, in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and outturn than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agricultural Department, Bengal, for the year ending June 30, 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1913 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends largely on the willingness of the rearers to pay an adequate price for pure seed.

A pamphlet was published in 1915, by Mr. M N. De, Sericultural Assistant at Pusa, which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that, by the provision of two small pulleys to the ordinary Bengal type of reeling machine, superior thread can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine) whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the stifling and storage of cocoons and the temperature and quality of the water used in the reeling pans, great improvements can be effected in most silk centres in Bengal and other districts.

Exports of Silk.—As a result of the war the trade has shown in some degree signs of revival from its decadent condition, both as regards its volume and value. The value of exports during 1915-16 improved by Rs 12 lakhs to Rs. 27½ lakhs, of which raw silk accounted for Rs. 24 lakhs. In 1916-17 the total exports rose to Rs. 54¾ lakhs. In 1926 27 exports of raw silk amounted to Rs. 32 lakhs and of silk manufactures nearly Rs. 3 lakhs.

Indigo.

Indigo dyes are obtained from the Indigofera a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many purposes of the industry the province of Bengal was [illegible] for this revival. It had no [illegible] been [illegible], however than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the maddar dye of Europe, then the safflower, the lac and the *al* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo. (See Watt's "Commercial Products of India.") In this connection it may be noted that increases in the price of coal in England, due to labour difficulties, have greatly strengthened the position of natural indigo. In February 1915 a conference was held at Delhi when the possibility of assisting the natural indigo industry was considered from three points of view—agricultural, research and commercial. The agri[illegible] botanical side of the question is [illegible] by M[illegible] and Mrs. [illegible] of Pusa in [illegible] Nos. 6 and 64 of

the Agricultural Research Institute. Other aspects of the question were fully examined last year in the Agricultural Journal of India by Mr. W. A. Davis, Indigo Research Chemist to the Government of India. An **Indigo Cess** Bill was passed in the Imperial Legislative Council in 1918. It provides for a cess on indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of indigo, the proceeds of the cess being received and expended by Government

Decline of the Industry. Since synthetic indigo was put upon the market in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

In 1926-27 the total yield of indigo was estimated at 20,100 cwts. on an area of 100,400 acres. The exports (1600 cwts.) were valued at Rs. 4½ lakhs.

OILS AND OIL CAKES.

The exports of oilseeds showed a large decrease of 33 per cent in quantity from 1,250,000 tons in 1925-26 to 838,000 tons in 1926-27, while in value there was a drop of 36 per cent. from Rs 29·64 lakhs Rs. 19,09 lakhs. Oilseeds receded to the fifth place in order of importance in India's export trade and were far behind tea (Rs. 29,04 lakhs) which occupied the fourth place in the year under review, the first three being jute, cotton (raw and manufactured) and food grains. The Indian export trade is suffering from the growing competition of other producing countries. In 1926-27 difficulties were accentuated by the fact that the British oilseed-crushing and vegetable oil industry had a trying year, owing to the general industrial dislocation brought about by the coal strike, and was able to take only a much smaller share of the Indian exports. It has also to be remembered that the Indian home market is absorbing a much larger share of production than before. All the principal varieties of Indian oilseeds recorded decreases. The following table shows the quantities of the principal seeds exported during the past two years and the pre war quinquennium.

Pre-war	average.	1925–26.	1926–27.
	Thousands of tons.		
Linseed ..	379	308	192
Rape seed	273	112	94
Groundnuts	212	455	368
Castor ..	114	110	102
Cotton ..	240	197	51
Sesamum	119	40	2
Copra ..	31	..	2
Others ..	85	28	27
Total ..	1,458	1,250	838

A pamphlet on the subject recently published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local [illegible] for oil There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and ground nut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of cocoanut oil and linseed oil, and an increase in the export of oil seeds which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil-milling industry in India

There are three difficulties with which any proposal to develop in India an oil-milling industry on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than cocoanut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake there is still more oil in the cake than cattle can digest. The excess of oil in the village cake where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Tea.

Tea cultivation in India is chiefly in Assam, Bengal and Southern India, the cultivation elsewhere being comparatively unimportant.

The total production of tea in India was estimated at 393 million lbs. in 1926, as compared with 364 million lbs. in 1925 and 375 million lbs. in 1924 Assam contributed 62 per cent., Northern India (excluding Assam) 25 per cent and Southern India 13 per cent the same as in the preceding year. The statement below shows the development of the industry during the past years.

——	1922	1923	1924	1925	1926
ACREAGE.	Acres.	Acres.	Acres.	Acres.	Acres.
Assam	412,100	411,900	413,300	416,500	420,600
Rest of Northern India ..	203,200	203,500	204,400	211,200	213,000
Southern India	92,900	95,800	97,000	100,000	106,100
Total ..	708,200	711,200	714,700	727,700	739,700
PRODUCTION.	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)
Assam	199,965	237,601	237,153	223,185	241,982
Rest of Northern India ..	75,126	92,076	91,351	89,017	99,804
Southern India	36,548	45,679	46,752	49,305	51,132
Total ..	311,639	375,356	375,256	363,507	392,918

Exports during the same years were as follows :—

Exports of tea by sea to foreign countries.

——	1922-23	1923-24	1924-25	1925-26	1926-27
	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)
From Northern India (Calcutta and Chittagong) ..	253,796	296,778	299,747	280,024	304,957
From Southern India (Madras ports)	30,386	38,560	37,717	43,133	42,935
From Bombay, Sind and Burma	4,114	3,417	2,643	2,576	1,372
Total	288,296	338,755	340,107	325,733	349,264

Exports during 1926-27 increased by 7 per cent. both in quantity and value as compared with the exports in 1925-26, and amounted to 349 million lbs valued at Rs 29 crores, as compared with 325¾ million lbs. valued at Rs. 27 crores in the preceding year. The United Kingdom took 290 million lbs. of black tea, valued at Rs. 24⅝ crores as against 279 million lbs. valued at Rs 23⅜ crores in the previous year. She also took 1,220,000 lbs. green tea, as compared with 1,305,000 lbs in 1925-26. More than 84 per cent. of the exports went to the United [illegible] whereas in 1925-26 her share had been nearly 86 per cent. The re-exports of Indian tea from the United Kingdom however decreased in 1926-27 to 45 million lbs. from 52 million lbs. in 1925-26, of which 17½ million lbs. were shipped to the Irish Free State, 15½ million lbs to the Continent of Europe, 5 million lbs. to the United States and 4 million lbs. to Canada. Australia's demands increased from 6 to 8 million lbs and the exports to Mesopotamia from 3 to 3½ million lbs., to Ceylon, from 4,171,000 lbs. to 4,427,000 lbs. Persia took nearly 6 million lbs as compared with 3 million lbs. in the preceding year, while sales to Russia declined to only [illegible] 000 lbs as compared with more than [illegible] million lbs in the previous [illegible]

EXPORTS AND PRICES.

... shows the quantity of Tea exported by sea and by land to Foreign Countries from India, Ceylon, China and Java in the ... 27 with variations in index numbers, taking the figure of 1896-97 as 100‡ :—

1922-23	13 3	221	12 3	175
1923-24	15 0	250	14 11	21[illegible]
1924-25	17 11	265	15 9	225
1925-26	15 5	224	13 4	190
1926-27	12 2	204	13 4	190

Consumption of tea in India.

As already explained, the reported figures of production are not strictly accurate, and consequently any estimate of the consumption *per capita* in India, as a whole, is vitiated at the outset. A further difficulty in estimating consumption has arisen on account of the discontinuance from the 1st April 1925 of the old system of registering land frontier traffic, and the introduction in its place of a system of registering the traffic only at selected railway stations adjacent to the frontier routes. In estimating the consumption of tea in 1925-26 the assumption was made that the trade by land across the frontier was the same as in the preceding year.

The quantity available for consumption in 1926-27 has been worked out by neglecting the land trade figures altogether as the net export or import figure of frontier trade is not likely to affect the estimate appreciably especially when the consumption figure is expressed in millions of lbs. Deducting net exports by sea in 1926-27 and the stocks left at the end of the year from the production in 1926 *plus* stocks left at the end of the preceding year the quantity available for consumption in 1926-27 works out to 48 million lbs. The figures for the preceding nine years are stated below.

	Million lbs.		Million lbs.
1925-26 .	46	1920-21 ..	44
1924-25 .	44	1919-20 ..	3[illegible]
1923-24 .	47	1918-19 ..	30
1922-23	29	1917-18 .	[illegible]
1921-22 .	31		

* Owing to the discontinuance of the old system of registration of land frontier trade with effect from 1925-26, the land trade figures of the preceding year have been repeated while working out the figure of net exports.

Quantity of Indian Tea exported by sea* (distinguished according to countries of final destination) and by land, in the years 1921-22 to 1926-27.

* Including shipments from the State of Travancore.

(*a*) Tea consigned from British India to Ceylon is almost entirely transhipped at Colombo to other countries and does not, therefore, appear in the Ceylon Customs Returns as imports into Ceylon.

(*b*) Exclusive of the exports from the North-West Frontier Province for the months, July 1923 to February 1924, for which returns were not received. † Includes Mesopotamia.

‡ These figures are not strictly comparable with the previous figures as they represent all the trade registered at selected railway stations adjacent to the land frontier, though a fair portion of them is frontier trade. The old system of registration of frontier trade by means of clerks posted on the main trade routes [illegible] the frontier has been discontinued from 1st April 1925. The figure for 1925-26 excludes exports from [illegible]

Coffee.

The history of the introduction of coffee into India is very obscure. Most writers agree that it was brought to Mysore some two centuries ago by a Mahommedan pilgrim named Baba Budan, who, on his return from Mecca, brought seven seeds with him. This tradition is so universally believed in by the inhabitants of the greater part of South India, that there seems every chance of its being founded on fact About the beginning of the 19th century there is no doubt coffee had found its way to India, and in 1823 a charter was granted to Fort Gloster, near Calcutta, authorising it to become a cotton mill, a coffee plantation and a rum distillery. Some of the coffee trees planted in fulfilment of that charter are supposed to be still alive, and about the same time coffee was successfully grown in the Botanic Gardens, Calcutta; but the industry of coffee planting nowhere found an abiding place on the plains of India but migrated to the hills of South India, in Mysore more especially, and thus into the very region where tradition affirms it had been introduced two centuries previously

The first systematic plantation was apparently Mr. Cannon's near Chikmuglur. This was established in 1830. It is supposed, however, that Major Bevan may have actually grown coffee on the Wynad at a slightly earlier date and that Mr. Cockburn's Shevaroy plantation bears the same date as Mr. Cannon's. In 1840 Mr. Glasson formed a plantation at Manantoddy, and in 1846 plantations were organised on the Nilgiri hills.

The Position of the Industry.—The statistics for 1926-27 show that the number of plantations in the year was 3,152 covering an area of 256 390 acres as against 3 143 plantations with an area of 253,455 acres in 1925-26. New land planted with coffee in these plantations during the year amounted to 6 281 acres, while the area of old cultivation abandoned was 3,657 acres. There was thus net increase of 2,624 acres over the total area (148 881 acres) under coffee in 1925-26. The total area under cultivation in 1926-27 was therefore 151 505 acres which was two per cent. over the area of the preceding year. Of this Mysore accounted for 52 per cent., Coorg and Madras 32 per cent, each, and Cochin and Travancore together 2 per cent.

The total reported production of cured coffee during the year was 34,286,806 lbs. as compared with 22,106.717 lbs in the preceding year.

Labour.—The daily average number of persons employed in plantations during 1926-27 was returned at 83,881 of whom 57,619 were permanently employed (namely, garden labour 41,582 and outside labour 16,037; and 26,262 temporarily employed outside labour), as compared with 82,968 persons (36,252 garden and 16,931 outside labour) permanently employed and 29 785 (temporary outside labour) in 1925 26

Exports—The total exports of coffee decreased steadily from 242,000 cwts in 1924 25 to 205,000 cwts. in 1925-26 and to 150,000 cwts in 1926-27. The principal destinations of Indian coffee were as usual the United Kingdom and France and shipments to these countries fell from 73,468 and 44,826 cwts. to 49,446 and 21,957 cwts. respectively. Of the other European countries Norway and Belgium took less but Germany and the Netherlands increased their taking from 14,200 and 13,000 cwts to 16,000 and 13,000 cwts. respectively. Shipments to Mesopotamia, Arabia, Bahrein Islands and Australia also showed decreases.

Exports of Coffee.

	Cwts.
1902-03	269,165
1903-04	291,254
1904-05	329,647
1905-06	360,182
1906-07	228,094

1924-25	242,000
1925-26	205,000
1926-27	150,000

The pre-war average value of the coffee exports was Rs. 79,17,000. In 1926-27 the exports were valued at Rs. 1,33 lakhs.

INDIAN TOBACCO.

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world, it passed through a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely, *N. Tabacum* and *N rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified with three great centres: namely, (1) Eastern and Northern Bengal (more especially the District of Rangpur); (2) Madras, Trichinopoly, Dindigul, Coconada and Calicut in Southern India; and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry.

The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural Research Institute, Pusa, and three Memoirs have been published recording the results of investigations in that direction The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the Burmese tobacco there are two main varieties "Seywet-gyi," the large-leaved variety and "Seywet-gyun," a smaller-leaved variety with pointed leaves. The former yields a heavier crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are:—(*i*) the Coimbatore and Dindigul tract of Madras, where the *Usi-Kappal* and *Wara Kappal* varieties are largely grown, the former supplying the Trichinopoly cigar; (*ii*) the Godavari Delta of Madras; (*iii*) the Rangpur tract of Bengal; (*iv*) the Districts of Bihar and Orissa; (*v*) Guzerat in Bombay and (*vi*) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped. In this condition they are baled, the broom-like ends projecting outwards. By varying the degree of fermentation of the leaves different qualities of tobacco are obtained A black variety is used in India for cake tobacco, and this is the most common product, but a certain amount of yellow leaf is grown for cigar making.

Small Holding Crop.—The area under tobacco in British India is always well above the million-acre line, and there are some 100,000 acres in the Indian States The outturn varies, according to the attention given to the crop, from 200lb. to as much as 3,000lb. of cured leaf per acre. The long-established Indian theory has been that the crop is suited only to small holdings, as it requires considerable attention and liberal manuring. But these latter conditions, as the history of the Assam tea industry shows, are not necessarily a bar to large plantations and organized production. The possibilities in this direction have been little explored largely because cultivation in small holdings was current when British influence was established in India, whereas the cultivation of tea owes its introduction entirely to British enterprise. The great bulk of the tobacco grown in the country disappears in local consumption, but the export trade is developing.

Export Trade.—The Exports of unmanufactured tobacco in 1925-26 amounted to 37 million lbs. valued at Rs. 105 lakhs.

Since the duty in England is charged by weight and not by value, India, as an exporter of the relatively cheaper grades, has to pay more duty in proportion than some foreign countries. But the higher degree of preference she will now enjoy will provide a substantial set off, and at the same time stimulate the efforts being made to raise the quality of production Another factor in the same direction is the effect of the heavier import duties on tobacco shipped to India, and the consequent tendency of middle-class and other consumers to find satisfaction in the homegrown article.

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the Erythroxylon Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be reaching alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth; though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims; but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marmagoa and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of newspapers, books, toys and piece-goods and in trunks which have secret compartments The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police Officials and give the alarm when a raid is contemplated. During the War several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out. In 1922-23 the largest seizure of cocaine made by the Excise Department in the Bombay Presidency was one of 10,500 grains while in 1923-24 a seizure of 24,000 grains was effected. In October 1924 the Excise Department made a seizure of 46,500 grains in a single case.

The Review of the Customs Administration in India 1925-26 contains the following paragraph

"Most of the cocaine seized on import into India appears to have come from the Far East The biggest seizures during the year were—

325 oz. at Rangoon.

525 oz. at Calcutta.

275 oz. at Bombay.

250, 198, and 149 oz. at Calcutta.

The total amount of cocaine seized by Custom Houses during the year was 3,453 oz

The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows. Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

The Opium Trade.

Two descriptions of opium must be distinguished. *Benares* opium which is manufactured from poppy grown in the United Provinces, and *Malwa* opium which is almost entirely produced in certain Native States in Central India and Rajputana.

Benares Opium.—Cultivation of poppy is confined to a limited area in the United Provinces and is permissible only under a license. The cultivator to whom advances of about one third of the total amount eventually due to them are made by Govt. free of interest is required to sell the whole of his produce to the Govt. at a rate fixed by them, now Rs. 10 per seer of 70° consistence. The area licensed for cultivation has in recent years been much reduced. In 1912-13 it was 285,220 bighas yielding 26,813 maunds of opium, and in 1925-26 it stood at 112,691 bighas with an outturn of 14,003 maunds. The crude opium received from the cultivators is sent to the Govt. Factory at Ghazipur where it is made up into three different forms:—(1) For export to the Far East known as "Provision" opium. This opium is made up in cakes at 71° consistence, 40 cakes weighing 140 lbs. being packed in a chest; (2) For consumption in India known as "Excise" opium. This is also made up in cakes at 90° consistence each weighing one seer, 60 cakes being packed in one chest; and (3) Medicinal opium, for use in India and for export to the United Kingdom only.

Malwa Opium.—The poppy from which Malwa opium is manufactured is grown chiefly in the Native States of Indore, Gwalior, Baroda, Rutlam, Jaora, Sitamau, Mewar, Partabgarh, Jhalawar, Kotah and Tonk. The British Government has no concern with the cultivation of the poppy, or the manufacture of the opium but it has since November, 1927, in collaboration with the States, been engaged in investigations directed to the ultimate abandonment by the States of poppy cultivation. The Government is used to regulate, before exports to China were stopped, the import of Malwa opium into, and the transport through, its territories. As the chief market for Malwa opium was China, and as the States in which the drug is produced had no access to the sea, except through British territory, the British Government were able to impose a duty on the importation of the drug on its way to Bombay for exportation by sea.

The poppy is sown in November, the plants flower in February, and by the end of March the whole of the opium has been collected by the cultivators.

Sales of Malwa opium for export to China have ceased since January 1913 and the trade has become extinct since 17th December of that year when the last shipment was made. Practically the whole [illegible] the Malwa opium from [illegible]y went to China.

Revenue.—The gross revenue derived by the Government of India from opium in recent years is as follows:—

	Rs.
1915-16	2,87,0[illegible],71[illegible]
1916-17	4,74,60,0[illegible]
1917-18	4,61,83,[illegible]38
1918-19	4,93,36,670
1919-20	4,55,62,1[illegible]
1920-21	3,53,41,[illegible]34
1921-22	3,07,24,[illegible]09
1922-23	3,78,92,068
1923-24	4,24,81,[illegible]4
1924-25	3,79,76,17[illegible]
1925-26	4,14,9[illegible],[illegible]81
1926-27	4,21,48,876
1927-28 (Budget Estimate) ..	3,83,08,[illegible]

The only countries to which exports are now permitted are the United Kingdom (as regards medical opium) and the British Far Eastern Colonies, Siam, French Indo-China and the Dutch East Indies.

Internal Consumption.—The internal policy of the Government of India has been and is, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit, or merely the indulgence of the almost universal desire of human beings (particularly those whose occupations involve exposure or severe bodily exertion), for a stimulant or a narcotic. Excessive indulgence has always been suppressed. The total consumption in British India has gone down considerably. It was 5,03,595 seers in 1912-13 and 2,91,[illegible] seers in 1925-26, the latest period for which figures are available.

Agreement with China.—The fluctuations in the revenue derived from opium are directly attributable to the trade conditions arising out of the limitation of opium exports. In 1907 being satisfied of the genuineness of the efforts of the Chinese Government to suppress the habit of consuming opium in China, the Government of India agreed to co-operate by gradually restricting the amount of opium exported from India to China. In 1908 an arrangement was concluded by which the total quantity of opium exported from India was to be reduced annually by 5,100 chests from an assumed standard of 67,000 chests. Under a further agreement, signed in May 1911, the cessation of the trade was to be accelerated on evidence being shown of the suppression of the native production of opium in China, and in accordance with this agreement a further limitation was placed on exports to Chinese ports. The reduction of exports led to an increase in the price of the drug in China and a corresponding rise in the price obtained in India at the auction sales. For some considerable time, however, in 1912 the trade in China was paralysed by the imposition by Provincial Governors in defiance of instructions from the Central Go[illegible]ment of restrictions on the importation and sale of Indian [illegible]pium. Stocks [illegible]mulated

rapidly at Shanghai and Hongkong and the position in December 1912 had become so acute that a strong and influential demand was made on the Government of India to relieve the situation by the suspension of sales. Sales were accordingly postponed both of Benares and Malwa opium and in order to afford the Malwa trade the most complete relief, the Government of India undertook to purchase for its own use 11,253 chests of Malwa opium which remained to be exported in 1913. The present position in this regard is that the export trade to China has ceased since 1913. But these details are now of historical importance only.

Exports.—Since April 1926, the public auctions at Calcutta have been discontinued and no opium is exported to the Far East except by Govt. to the Govt. of the importing country under a direct sales agreement. The exports are covered by a certificate from the importing Govt. that the opium is required by them for legitimate purposes and will not be re-exported. In 1926, the Govt. of India also decided to extinguish exports to the Far East progressively in 10 years, ending December 31st, 1925, except for strictly medicinal or scientific purposes. Number of chests exported has fallen from 34,827 in 1912 to 8,115 in 1926

GLASS AND GLASSWARE.

The total value of the glass and glassware imported into India in 1925-26 amounted to Rs. 259 lakhs compared with Rs. 260 lakhs in the previous year. The imports of glassware in India are showing an upward tendency, they being in 1913-14 over Rs. 246 lakhs in value, *i.e.*, over the quinquennial average of Rs. 161 lakhs. Austria Hungary and Germany before the outbreak of the war exported bangles, beads, bottles, funnels, chimneys and globes, etc., to the value of Rs. 116 lakhs in 1913-14. The value of average imports from the enemy countries during the five pre-war years was Rs. 93 lakhs or about 57% of the trade. With their disappearance from the Indian market, imports from Japan increased to 71% from 8%, the pre-war average. United Kingdom increased her shipments of sheet and plate glass, which before 1914 came largely from Belgium. Japan, however, could not meet the Indian demand, and hence renewed and pioneer efforts were made in India to satisfy the needs of the Indian consumer. After the war imports from what was the Dual Monarchy quickly revived.

Manufacture of Glass in India.—Glass was manufactured in India in centuries before Christ and Pliny makes mention of "Indian Glass" as being of superior quality. As a result of recent archaeological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the Industry. But no further traces of ancient Indian Glass Industry as such survive; yet, it is certain that by the sixteenth century it was an established Industry producing mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage, the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this line. Since then a number of concerns have been started, a number of them have failed, while some are still clinging to life owing to war conditions. They mainly devote themselves to the manufacture of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two well-defined classes of the Industry in its present stage (i) [illegible] Cottage Industry and (ii) the modern Factory

(i) The indigenous Cottage Industry which is represented in all parts of the country, but has its chief centres in Firozabad District of U P, and Belgaum District, in the South, is mainly concerned with the manufacture of cheap bangles made from "glass cakes or blocks" made in larger Factories. The industry is at present in a flourishing state and supplies nearly one-third of the Indian demand for bangles The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose "silky" bangles are ousting the old type Indian ones.

(ii) The modern Factory type of organization of this Industry is just in its infancy at present The existing Factories either stop at producing glass cakes for bangle as in Firozabad or simple kind of lampwares and bottles. With the existing state of knowledge and machinery in India they can neither produce sheet and plate glass, nor do they pretend to manufacture laboratory or table glass. Artistic glassware is out of the question and the private capitalists who have to run their concerns mostly with commercial ends do not think it worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware, etc., and in order to meet the Indian demand for them, new Factories were started and old revived, which produced only cheap and simple kind of lampware and bottles on small scale The total production of these Indian Glass Works has not been exactly estimated, but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are at present 14 Factories engaged in the production of lampware, of which two or three only produce bottles and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad, and Bijhol and Ambala; while bottles are only manufactured at Naini and Lahore, and recently at Calcutta.

During the latter years of the war period, a number of Glass Works were opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the [illegible] of imports of German, and Belgian glass.

Causes of failure.—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventible causes, prominent among which were (1) Lack of enlightened management. (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to. (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (*a*) nearness of quartz and fire-clay, (*b*) nearness of fuel, and (*c*) by the nearness of market. At least two must be present. In some concerns, two were absent. (4) Specialisation was lacking, some factories in their initial stages trying to manufacture three or four different kinds of glass are simultaneously like lampware, bottles, and bangles, etc. (5) Paucity of sufficient fluid capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning.

But beyond these there are certain real and special causes that contributed to the failure of some of these and hinder the progress of the rest Chief among them are (1) The Industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature. (3) Paucity of skilled labour of higher type. The present Indian workmen in this line and blowers are few in number and illiterate. They, therefore, master the situation and are unamendable to management. (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at a great distance from the coal-fields. (5) To a certain extent, competition from Japan and other European countries.

Alkali used is almost entirely of English manufacture being Carbonate of Soda 98-99% in a powdered form. This Alkali has almost completely taken place of the various Alkaline Earths formerly employed by the Glass Bangle manufactures as the latter cannot be used in the manufacture of glass which is to compete with the imported article. These points must be carefully noted for future guidance.

The Industry developed considerably under war conditions; but in peace times, in this transition stage, immediate efforts must be made in the direction of what the Indian Industrial Commission say in their Report (Appendix E), *viz.*: "The Glass Industry, even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful."

WILD BIRDS' PLUMAGE.

The Bill for prohibiting the importation into England of wild birds' plumage, which was introduced into Parliament in 1913, was the occasion of a fierce controversy on the nature of the plumage traffic. Organised opposition to the Bill, although successful in preventing it from becoming law, failed to convince the public that the plumage trade was not one of great cruelty. The controversy continued with unabated vigour until May 1921, when an agreement was arrived at between the two parties. The most important clause in the agreement stipulates that within four months of the Bill becoming law an Advisory Committee shall be appointed by the Board of Trade. This Committee will consist of an independent chairman, two expert ornithologists, three representatives of the feather trade, and four other independent members. The function of this Committee will be to advise the Board of Trade as to additions to and removals from the existing schedule (ostrich and elder duck) of birds whose plumage may be imported. The passing of the Plumage Bill will thus place England abreast of the United States and of her own daughter Dominions in the suppression of a barbarous industry, as all legitimate methods of breeding birds for their plumage will be safeguarded as definite exceptions under the Plumage Bill.

Plumage birds.—The birds most killed on account of their plumage in India are paddy birds, egrets, kingfishers, bustards, junglefowl, paroquets, peafowl, hoopoes and Egrets and (popularly known as Blue Jays) are perhaps the birds which have been most extensively killed in the past, and of these, egrets have attracted the greatest attention. There are three species met with in India: the Large, Smaller and Little Egrets All three are pure white slim birds which develop during the breeding season a dorsal train of feathers, which elongates and becomes "decomposed" as it is expressed, that is to say, the barbs are separate and distinct from each other, thus forming the ornamental plume or aigrette for which these birds are much sought after and ruthlessly destroyed. Thirty years ago the exports were valued at over six lakhs in one year, but since 1895 the export trade has steadily diminished. But, though legitimite exports have been stopped, the trade is so lucrative as to lead to many attempts at smuggling. Within a recent period of 12 months the Bombay Preventive Department, for example, seized egret plumes worth Rs. 2,19,047 in India and £44,000 in London. The rupee value represents the sum which the exporters paid to those who took the feathers from the birds, so the loss to the trade was considerable In addition, penalties varying from Rs. 5,000 to Rs. 10 000 each and amounting altogether to Rs. 59,175 were inflicted on the ten merchants concerned in attempting to export the feathers A case was reported from Rangoon in 1916 of a man being found in possession 22 lbs. of egret feathers valued at Rs. 66,000. Although frequently denied, there seem very little reason to doubt, that within the last decade egrets have been successfully bred in capti-

vity by the fisherfolk in the province of Sind. But whether such birds can be bred without cruelty, and if so whether the export of their plumage could be legalised without encouraging barbarities in other areas of the peninsula, is a question which can only be decided as a result of a searching and exhaustive inquiry.

Legislation.—Indian legislation on the subject will be studied with interest by those who have followed the course of legislation on this subject in other countries. Until 1887 no legislation was considered necessary in India. An Act of that year enabled local governments and municipal and cantonment authorities to make rules prohibiting under penalties the sale or possession of wild birds recently killed or taken during their breeding seasons, and the importation into any Municipal or cantonment area of the plumage of any wild birds during those seasons; and local governments were empowered to apply these provisions to animals other than birds.

Afterwards, in 1902, action was taken under the Sea Customs Act to prohibit the exportation of the skins and feathers of birds, except feathers of ostriches and skins and feathers exported *bona fide* as specimens illustrative of natural history. Act VIII of 1912 goes much further than the previous law. It schedules a list of wild birds and animals to which the Act is to apply in the first instance, enables local governments to extend this list, empowers local governments to establish "close times," presumably during the breeding seasons, in the whole of their territories or in specified areas, for wild birds and animals to which the Act applies, and imposes penalties for the capture, sale, and purchase of birds and animals in contravention of the "close time" regulations, and for the sale, purchase and possession of plumage taken from birds during the close time. There is power to grant exemptions in the interests of scientific research, and there are savings for the capture or killing by any person of a wild animal in defence of himself or of any other person, and for the capture or killing of any wild bird or animal in *bona fide* defence of property.

One defect in the law may be noticed. When an exporter is discovered, the Customs Department can on a magistrate's warrant have his house searched and seize the feathers found there to produce as evidence that he is engaged in the trade. But they have to return the feathers and can only take possession of them if they are discovered presently in course of export.

HIDES, SKINS, AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good; there was a large demand for hides, and prices ruled high. While in the continental markets stocks were high owing to overtrading in the previous year, the United States had a shortage which was estimated at approximately two million pieces. On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries, especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India, it is well known, has hitherto been largely, if not quite entirely, in the hands of German firms or firms of German origin. Germany has had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent. of the total exports. In 1912-13 she took 32 per cent and in 1913-14, 35 per cent. Raw hides were exported to Trieste in considerable quantities whence they were taken to Germany or Austria. In the four months before the outbreak of war 15 per cent. of India's exports passed through Trieste in 1913-14 the percentage was 21.

The exports in hides and skins in 1926-27 amounted in value to Rs. 14,55 Lakhs. Shipments of raw hides and skins amounted to 50 627 tons which was only 200 tons less than the exports of the previous year. Fifty-fi[illegible] per cent of the exports under this head consisted raw hides which amounted to 27,900 tons valued at Rs. 2,37 lakhs as compared with 28,400 tons valued at Rs 3,21 lakhs shipped in the preceding year.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect: it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

No large industry has changed more rapidly and completely than that of leather. By the **chrome process**, for example, superior leather may be produced from the strongest buffalo hides in seven days, from cowhide in twenty-four hours, and from sheep and goat skins in six to eight hours; and these operations formerly took thirty days or as much as eighteen months. Of these changes the native tanners of India were slow to take advantage but in spite of general backwardness the leather produced by some of the tanneries, especially those under [illegible] t, is in [illegible] equal to the best [illegible] But since the outbreak of war [illegible]

gress has been more rapid and considerable quantities of special forms of chrome leather, for which Indian hides are particularly suitable have found a ready market in London.

Protecting the industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919 when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent. on hides and skins with a rebate of 10 per cent on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent. rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire: and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate."

Indigenous methods.—India possesses a large selection of excellent tanning materials such as Acacia pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrabolans. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

GRAIN ELEVATORS.

The question of adopting elevators for the handling of Indian grain has engaged attention for some time and has assumed increased importance in the light of the railway congestion experienced in recent years and more particularly in the grain season. In the last three years great strides have been made by other countries in the adoption or perfecting of the elevator system, and a large mass of contemporary data on the subject has been brought together by the Commercial Intelligence Department. Since the subject is one that cannot receive adequate consideration in India till the facts are before the public, these have been embodied in a pamphlet entitled *Indian Wheat and Grain Elevators*, by the late Mr. F. Noel-Paton, Director General of Commercial Intelligence to the Government of India. The work gives full particulars regarding India's production of wheat, and shows that less than one-eighth of the crop is exported. It describes the conditions under which the grain is held and the risks that t[illegible] It is pointed out that the cultivator has no adequate means of preserving his wheat and that he is constrained to sell at harvest time: also that the prices then obtained by him are considerably lower than those usually current in later months The constant nature of the European demand is explained and an attempt is made to gauge the probability that the enormously increased quantities of wheat to be expected when new irrigation tracts come into bearing would be accepted by Europe at one time and at a good price, or could be economically transported under a system in which a few months of congestion alternated with a longer period of stagnation. Figures are given which suggest that in practice the effect of equipping railways to do this is to intensify the evil and so to engage in a vicious circle. The author explains the structural nature of elevators and their functions as constituted in other countries Particulars are given as to the laws that govern their operations in such [illegible]tries.

TRADE MARKS.

The **Indian Merchandise Marks Act** (IV of 1889) was passed in 1889, but its operation in the earlier years was restricted, especially in Calcutta, in consequence of the lack of adequate Customs machinery for the examination of goods. In 1894, with the introduction of the present tariff, the Customs staff was strengthened for the examination of goods for assessment to duty, and this increase enabled examination to be made at the same time for the purposes of the Merchandise Marks Act. The Act was intended originally to prevent the fraudulent sale of goods bearing false trade marks or false trade descriptions (as of origin, quality, weight, or quantity). While the Act was before the Legislature a provision was added to require that piece-goods should be stamped with their length in yards. In this respect these goods are an exception, for the Act does not require that other descriptions of goods should be stamped or marked, though it requires that when goods are marked the marks must be a correct description. **The number of detentions** under the Act during the twenty years ending 1924-25 has been:—

Average of the five years ending		
ending	1907-08	1,198
" " " " ..	1912-13	1,960
" " " " ..	1917-18	2,810
" " " " ..	1922-23	1,840
" " " " .	1924-25	3,331

Detention is but rarely followed by confiscation, and there have been only 64 such cases during the past ten years. Usually detained goods are released with a fine, and this procedure was followed in 16,919 cases out of the 27,184 detentions ordered in the same period. In 10,198 cases the detained goods were released without the infliction of a fine. In this period of ten years 9 per cent. of the detentions were on account of the application of false trade marks or false trade descriptions. In 69 per cent. of the cases detention was ordered because the country of origin was either not stated or was falsely stated, and in 22 per cent because the provisions of the Act for the stamping of piece-goods had been infringed.

INDIAN INVENTIONS AND DESIGNS.

A handbook to the **Patent Office** in India, which is published by the Government Press, Calcutta, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The foundation of patent legislation throughout the world lies in the English "Statute of Monopolies" which was enacted in 1623, the 21st year of King James the First. In part this Act has been repealed, but the extant portion of the more important section 6 is as follows:—"Provided also that any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under, hereafter to be made of the sole working or making of any manner of new manufactures within this realm to the true and first inventor and inventors of such manufactures, which others at the time of making of such letters patent and grants shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities at home, or hurt of trade, or generally inconvenient; the said fourteen years to be accomplished from the date of the first letters patent or grants of such privilege hereafter to be made, but that the same shall be of such force as they should be if this Act had never been made, and of none other."

The **existing Indian Patent Law** is contained in the Indian Patents and Designs Act, 1911 supplemented by the Indian Patents and Designs (Temporary Rules Act, 1915 and by the Rules made under those Acts. The Patent Office does not deal with trade mark or with copyright generally in books, pictures music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act (IV of 1889) which forms Chapter XVIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matters of major interest. One main difference exists, however, as owing to the absence of provision of law for the **registration of trade marks,** India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully for some twenty years Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action and, owing to some informalities the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888 All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma, but it does not embrace the Native States. Of the latter three, viz., (1) Hyderabad (Deccan), (2) M[illegible] [illegible]3) Gwalior have ordinances of their own for which [illegible] must

be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. The object of the Act of 1911 was to provide a simpler, more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail. They gave further protection both to the inventor, by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established, with power to dispose of many matters previously referred to the Governor-General in Council and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an "exclusive privilege." The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

Important amendments have been made in the Indian Patents and Designs Act since 1911, the most important being the priority given to Indian Inventors over others to apply for British patents within 12 months from the date of the Indian application. Similarly, an applicant for a British patent has priority over other applicants in India for 12 months from the date of his British application.

The Indian Tariff Board, 1927.

Textile Industry.—The Special Tariff Board, which was appointed in June 1926 to investigate the causes of the depression in the cotton textile industry and to report whether the industry was in need of protection submitted its report in January, 1927 but it was not published until June. The Board found that the depression in the mill industry which commenced in 1923 had affected Bombay much more acutely than any other centre, and that throughout India, the mills with spinning departments only had, with very few exceptions, been affected to a greater extent than mills with both spinning and weaving *departments.*

Causes of the Depression.—The suggested causes of the depression were examined under four heads, (i) world factors (ii) external competition, (iii) causes affecting the Indian cotton textile industry as a whole and (iv) causes special to Bombay. The two world factors which, in the opinion of the Board had materially contributed to the depression were the altered relations between agrarian and general prices from 1920 onwards and the course of the prices of American cotton from that year. Under the head "external competition", the most important findings, based on an exhaustive examination of the statistics of Japanese imports of yarn and piece-goods into India during the post-war period and of their character, were that Japanese yarn of 32s counts and above and Japanese cloth of counts of 30s and above were being sold in India at prices which were practically equal to the cost of manufacture alone in India, without any allowance for profit or depreciation. In these circumstances, the Board held that the competition of Japanese yarn and cloth must be regarded as an important cause of the depression in the mill industry in India. It stigmatised this competition as unfair on the ground that the conditions of labour in Japan were inferior to those in India in respect of the length of the working day and the employment of women and juveniles at night. The advantage derived from the double shift working rendered possible by the employment of women and children at night, which is prohibited by the Indian Factory Act, was placed at 4 per cent. on the actual cost of manufacture both of yarn and cloth, an advantage which would be considerably increased if a reasonable return on capital were included in the cost of production. The depreciation of the Japanese exchange from 1924 onwards had stimulated exports from Japan to India whilst it lasted but Japan had ceased to enjoy any special advantage in this respect nor could it be established that Japanese goods were being dumped in India. Amongst the causes of depression which has been suggested as applicable to India as a whole, the Board found that over-capitalisation of mills could not be included though it had undoubtedly contributed to accentuate the depression in Bombay as had the high dividends paid and the consequent failure to husband resources during the boom period. The use of inefficient machinery was also ruled out as a cause of depression. The managing agency system was in the main acquitted of responsibility for the existing conditions though certain defects inherent in that system such as undue conservatism and lack of initiative were held to have to some extent contributory to them. The Board's conclusion as regards the stabilisation of the rupee at 1s. 6d. was that coming as this did, at a time of falling prices, it had rendered the problem presented by the disparity between prices and wages in the industry somewhat more acute.

Of the causes of the depression which had been suggested as special to Bombay, the Board found that the loss of the export trade in yarn with China and the increasing competition of mills in Ahmedabad and other centres were the most important. In the five years before the war, the exports of yarn from Bombay represented 53 per cent. of the total Bombay mill production. In the five years ending 1923-24, they were only 24 per cent. and in 1924-25, they had fallen to 11 per cent. The loss of the trade with China in yarn which had not been compensated appreciably by an increase in the extent of piece-goods meant that the Bombay mills had to find an outlet in the home market for the equivalent of 300 million yards of cloth at a time when they were faced with the competition of an additional 400 million yards of cloth manufactured in mills in India outside Bombay. The costs of production in Bombay and other centres were carefully examined and the conclusion reached was that Bombay was under substantial disadvantages as compared with centres in respect of cost of fuel and power, cost of water and higher local taxation. These disadvantages, however, were rather more than set off by advantages in regard to cost of stores of insurance and of office expenses. By far the greatest disability under which the Bombay industry laboured in its competition with mills in Ahmedabad and other centres in India was its high cost of labour.

Remedial Measures.—The remedial measures suggested by the Board were discussed under four heads—(i) internal economies, (ii) improve[illegible] (iii) changes in the tariff [illegible] [illegible] changes in the tariff [illegible] most important direction in which internal economies could be effected was by increasing the efficiency of labour a method which it regarded as greatly to be preferred to a reduction in wages. It made very detailed recommendations as to the ways in which greater labour efficiency could be secured. Other suggestions put foward under this head were that a single hedge contract would lead to economies in the purchase of the raw material that the charge for water used by the mills in Bombay should be reduced and that the "town duty" of one rupee per bale levied on all cotton consumed in the Bombay mills should be reduced to eight annas. The Board then turned its attention to the organisation of the industry and made suggestions for increasing the efficiency of the Bombay Millowners' Association by the

constitution of strong sub-committees to deal with the various branches of the Association's activities. Improvements in the personnel of the firms of managing agents were recommended. The writing down of the capital in the Bombay mill industry was held to be a matter requiring immediate attention. The most important recommendation under this head was that Bombay should utilise to the full its natural advantages in the matter of climate and situation for the production of goods of higher counts and that the difficulties in the way of its doing so presented by the lack of suitable raw material in India should be overcome temporarily by the greater use of American and African cotton. A great expansion in the Bombay mill production of bleached, coloured and dyed and printed goods was suggested as one remedy for the depression. To this end, the Board recommended the establishment by a combination of mills of a large factory for combined printing, bleaching and dyeing in or near Bombay. It further suggested greater attention to the development of the export trade of Bombay and pointed out that that the first essential to such development was that adequate information should be collected regarding conditions in certain large markets in the Near and Far East, and that the industry should be in a position to utilise it. In regard to changes in the tariff, the Board was unanimous in holding that no justification for an export duty on cotton could be established and that the concession of free entry enjoyed by cotton mill machinery and mill stores prior to 1921 should again be granted. It was further agreed that a moderate measure of protection, in addition to that afforded by the existing revenue duty of 5 per cent. on yarn and 11 per cent on cloth, could be justified for such period as labour conditions in Japan remained inferior to those in India.

The President, Mr. F. Noyce, differed from his colleagues, Raja Hari Kishan Kaul and Mr. N S. Subba Rao as to the form in which this protection should be given. The two latter held that a differential duty against Japan was undesirable as was also an all round increase in the duty of yarn, owing to its effect on the hand loom industry. Their view was that protection to the cotton mill industry should be given in the form of an addition to the exisitng duty on all cotton manufactures other than yarn. The addition they recommended was 4 per cent and in discussing the form in which state aid could be given other than by changes in the tariff they proposed that the proceeds of the additional duty should be utilised in providing a stimulus to the production of goods of higher quality by the grant of a bounty on the spinning of higher counts of yarn. They, therefore, recommended that a bounty of one anna per pound, or its equivalent, should be given on all yarn of 32s and higher counts, based on the production of an average of 15 per cent. of the total spindleage in mills in British India. The operation of the bounty would be limited to four years, at the end of which period the operation of the new Japanese Factory Law would have removed the effect of the unfair competition from that country. It would also be limited to the production of 15 per cent. of the spindleage in any one mill and would not be given unless the total spindleage on the production of higher counts exceeded 7½ per cent. and the average count spun was not below 34s.

Mr. Noyce held that this scheme would do nothing to help those mills which had no weaving departments or to solve the greatest problem before the Bombay mill industry that of meeting the increasing competition of other centres He also considered that the administrative difficulties in working it would prove insuperable In his view, the maximum amount of protection which could be justified was that which would offset the actual advantage per pound of yarn or per pound of cloth manufactured which was derived from double shift working in Japan He, therefore, recommended the imposition of a differential duty of 4 per cent. on all cotton manufactures imported into India from Japan this duty to continue until the end of the financial year 1929-30.

Although the Board failed to agree in regard to the bounty scheme, it was unanimous in its views on other forms of State aid to the industry It suggested assistance from Government if a satisfactory scheme for a combined bleaching dyeing and printing plant could be put forward by the Bombay mill industry, the establishment of Trade Commissioners at Basra and Mombasa and a rapid survey of the potentialities of the markets in other countries by a small mission consisting of an official and a nominee of the Bombay Millowners' Association. It also suggested that the Bombay mill industry should have its own representative in its principal export markets and that an expenditure incurred by the Bombay Millowners' Association in this respect should be supplemented for four years by the grant of an equal amount from Government up to a maximum of Rs. 25,000 annually. The question of assisting the industry by subsidising shipping freights was held to be one for investigation by the Trade Commissioners and the Commercial Mission. No justification was considered to exist for the grant of export bounties or the abolition of company super tax Finally, the Board rejected the claim for special treatment of the hosiery industry and also that put forward by certain mills using imported yarn for the abolition of the duty on yarn of counts above 40s or for a rebate of the duty on such yarn.

Decision of the Government of India—The Government of India dealt with the recommendations of the Board so far as these related to changes in the Tariff in a Resolution of the Commerce Department dated June 7th, 1927 They accepted Mr. Noyce's view that the proposed bounty scheme was impracticable and held that its rejection removed the principal reason advanced by the majority of the Board for a general increase in the import duty on cotton-piece goods. They further held that the advantages to Japan resulting from labour conditions, which they placed at 10 per cent if a reasonable return on capital were included in the cost of production, was more than covered by the existing revenue duty of 11 per cent on cloth and that in these circumstances no additional duty on this account could be justified. The existing duty of 5 per cent. on yarn did not fully cover the Japanese advantage, but an additional duty was undesirable in view of its prejudicial effect on the handloom industry The

men lations of the Board in regard to the duty on machinery and mill stores were accepted in principle, but the Government of India held that differentiation between industries was undesirable. They, therefore, decided that the duty on all machinery and on certain mill stores should be remitted.

The decision of the Government of India led to a strong protest from a conference of representatives of the cotton mill industry which met at Bombay in June, and by a deputation of millowners which was subsequently received by the Viceroy at Simla. The representations thus made led to a reconsideration of the whole question by the Government of India and on August 16th, 1927, they announced that they had come to the conclusion that the cotton spinning industry could fairly claim additional assistance and that they had decided to bring before the Legislature a Bill providing that, up to the 31st March 1930, the duty on cotton yarn, irrespective of the country of origin, should be one and half annas per pound or 5 per cent. *ad valorem* whichever was higher. This meant that the specific duty would be leviable on all imported yarn, unless its value exceeded Rs 1-14-0 per pound, in which case it would continue to be 5 per cent. *ad valorem*. In order to minimise the burden imposed on the handloom industry by the revised duty, the duty on artificial silk which was being used in increasing quantities by handloom weavers and in cotton mills would be reduced from 15 to 7½ per cent. The Government also decided to extend the list of mill stores exempted from duty. Two Acts embodying these decisions were passed at the September session of the Imperial Legislature.

The Government of India have accepted the recommendation of the Tariff Board that a small Commercial Mission should be deputed to explore the potentialities of certain export markets. Dr D. B. Meek, the Director-General of Commercial Intelligence, and Mr. T. Maloney, the Secretary of the Bombay Millowners' Association, have been deputed to undertake the investigation.

Miscellaneous Inquiries.—The Indian Tariff Board proper was engaged during the year on a number of miscellaneous enquiries. It took evidence in regard to railway waggons and underframes and their component parts wire and wire nails, bolts and nuts, steel castings, machine belting, printing paper, ply wood and tea chests and matches. The only report published during the year was that on the duties on printing paper. The question referred to the Board was the interpretation of the entry in the Tariff schedule imposing a protective duty of one anna per pound on printing paper containing less than 65 per cent of mechanical wood pulp. The Government of India had ruled that the percentage of mechanical pulp should be calculated on the total weight of the paper and not merely on the fibre content. The effect of this ruling was to bring within the scope of the duty large quantities of imported news print which there appeared reason to believe it had been the intention of the Legislature to exclude when the Bamboo Paper Industry (Protection Act) of 1925 was passed. The Tariff Board reported in favour of excluding from the protective duty printing paper containing no mechanical wood pulp or in which the mechanical wood pulp amounts to less than 65 per cent of the fibre content. Their recommendation was accepted by the Government of India and embodied in an Act passed at the September session of the Legislature.

COPYRIGHT.

There is no provision of law in Bri[illegible] for the registration of Copyright. [illegible] for Copyright accrues under the Ind[illegible] right Act under which there is now no registration of rights, but the printer has to supply copies of these work as stated in that Act and in the Printing Presses and Books Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled some f[illegible] adaptations of them to [illegible] Indian law and procedu[illegible]e and [illegible] of them in their applications, [illegible] and musical compositions. In the [illegible] first published in British India the sole right to produce, reproduce, perform of publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, "have not been published, *i.e.*, written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining **musical work** as meaning any combination of melody and harmony, or either of them, printed, reduced to writing, or other wise graphically produced or reproduced."

Customs Tariff.

General import duties are levied for fiscal purposes and not for the protection of Indian industries But the tariff has been modified with a view to admitting free or at favourable rates articles, the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials, manures, agricultural implements and dairy appliances are admitted free. Machinery, printing materials, etc. are assessed at 2½ per cent. and iron and steel railway material and ships at 10 per cent High duties are imposed on tobacco, liquors and matches.

Re-Imports.—Articles of foreign production on which import duty has been once paid, if subsequently exported, are on re-import exempted from duty on the following conditions:—

The Collector of Customs must be satisfied—

(1) of the identity of the articles;

(2) that no drawback of duty was paid on their export;

(3) that the ownership has not changed between the time of re-export and subsequent re-import;

(4) that they are private personal property re-imported for personal use, not merchandise for sale;

(5) that not more than three years have passed since they were re-exported.

Duty is, however, charged on the cost of repairs done to the articles while abroad which should be declared by the person re-importing the articles in a form which will be supplied to him at the time of re-importation.

To facilitate identification on re-importation an export certificate giving the necessary particulars should be obtained from the Customs Department at the time of shipment of the articles which should be tendered for examination.

This concession of free entry on re-importation is not extended for the benefit of Companies or Corporate Bodies.

Drawbacks.—When any goods, capable of being easily identified which have been imported by sea into any Customs port from any foreign port, and upon which duties of Customs have been paid on importation, are re-exported by sea from such Customs port to any foreign port, or as provisions or stores for use on board a ship proceeding to a foreign port, seven-eighths of such duties shall, except as otherwise hereinafter provided, be repaid as drawback:

Provided that, in every such case, the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re-export be made within two years from the date of importation, as shown by the records of the Custom House, or within such term as the Chief Customs Authority, or Chief Customs Officer on sufficient cause being shown in any case determines, provided further that the Chief Customs Officer shall not extend the term to a period exceeding 3 years.

When any goods, having been charged with Import duty at one Customs port and thence exported to another, are re-exported by sea as aforesaid, drawback shall be allowed on such goods as if they had been so re-exported from the former port:

Provided that, in every such case, the goods be identified to the satisfaction of the Officer in-Charge of the Custom House at the port of final exportation, and that such final exportation be made within three years from the date on which they were first imported into British India.

No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re-export.

No such payment of drawback shall be made until the vessel carrying the goods has put out to sea, or unless payment be demanded within six months from the date of entry for shipment.

Every person, or his duly authorised agent claiming drawback on any goods duly exported, shall make and subscribe a declaration that such goods have been actually exported and have not been re-landed and are not intended to be re-landed at any Customs port; and that such person was at the time of entry outwards and shipment, and continues to be, entitled to drawback thereon.

Merchandise Marks.—Importers into India especially from countries other than the United Kingdom, would do well to make themselves acquainted with the law and regulations relating to merchandise marks. In Appendix II will be found the principal provisions of the Indian Merchandise Marks Act, 1889, and connected Acts and the notifications issued thereunder. The following summary of the regulations in force does not claim to be exhaustive For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtainable of all agents for the sale of Indian Government publications.

Infringements or offences may be classified conveniently under four heads:—

1. Counterfeit trade marks;
2. Trade descriptions that are false in respect of the country of origin;
3. Trade descriptions that are false in other respects; and
4. Lengths not properly stamped on piece-goods

Schedule II—(Import Tariff).

1.—In the expression "*ad valorem*" used in these Schedules the reference is to "real value" as defined in Section 30 of the Sea Customs Act 1878 (VIII of 1878), unless an article has a tariff value assigned to it.

—Tariff valued heads are based on the ordinary trade description of each article and cover all related grades and mixtures unless they are separately provided for.

Trade.

India is pre-eminently an agricultural country and that fact dominates the course of its trade. The great export staples are the produce of the soil—wheat, seeds, cotton and jute. If we look back on the course of Indian trade over a long period of years we shall note a striking development towards stability. In the days that are past, the outturn of the soil was subjected to periodic shocks from famines arising from the failure of the rains, when the export trade in these staples dwindled to small proportions. But the spread of irrigation has produced a great change, and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such years as 1896-97 and 1899-1900. Well over thirty per cent of the culturable area of the Punjab is under irrigation, and huge new works are in progress to utilise the waters of the Sutlej, and of the Indus in Sind. Whilst these great works have been carried out or are in progress to spill on the land the floods of the snowfed rivers of the North, other works of a less imposing character have safeguarded the arid tracts of the South. A chain of storage lakes arrests the rains of the Western Ghats and through canals spreads them over the parched lands of the Deccan. The rivers of the South like the Cauvery are being harnessed to preserve their flood waters for Madras. All over India irrigation works, large and small, are being restlessly pressed forward, and their effect is to give a far greater stability to Indian agriculture.

The destination of these surplus crops is another factor of importance. The great customer for Indian cotton is Japan, and to a lesser extent the Continent of Europe. Continental Europe is also a large buyer of her oilseeds and another produce, and of her hides and skins. Whilst the United Kingdom is the great market for tea and wheat, foreign countries are a very important facts in the Indian export-trade, therefore India had a vital interest in the economic recovery of Europe. When the post-war boom collapsed it hit India hard and for a year or two the export trade reeled under the shock. The progress of the Dawes Plan and the measures taken under the League of Nations to assist Austria and Hungary back to industrial health had a special bearing on the prosperity of India; they have been elements of importance in inducing her recovery of prosperity.

But whilst India is pre-eminently an agricultural country, she ranks at the International Labour Office at Geneva as one of the great industrial countries of the world. Her manufacturing industries are few in number and are concentrated in a few areas, but they are of great importance. The largest is the cotton textile industry, which has its home in the town and Island of Bombay, with important subsidiary centres at Ahmedabad, Sholapur and Nagpur. Next in importance is the jute industry. Raw jute is a virtual monopoly of Bengal, and the jute mills are concentrated in and near Calcutta. The metallurgical industry is of more recent growth. The principal centre is Jamshedpur, the seat of the works of the Tata Iron and Steel Company where subsidiary industries have sprung up to utilise the products of the blast furnaces and mills. A very large proportion of the jute manufactures is exported. The cotton textile industry has lost a considerable part of its export trade to Japan, the Far East and East Africa, the mills find their principal outlet in India itself, and even there they are subject to severe competition from Japan and China. The iron and steel industry is for the most part a home industry, though large quantities of Indian pig iron are shipped to the Far East, and in some years to the western ports of North and South America. Therefore whilst India is still in the main an agricultural country, three-quarters of her population drawing their sustenance from the soil, her manufacturing industries are of large and growing importance, and their prosperity every year affects in an increasing degree the general prosperity of the people.

I.—GENERAL.

The value of total exports of merchandise amounted to Rs. 300 crores as compared with Rs 385 crores in 1925-26, showing a reduction of about 20 per cent. The most important factor that contributed to this decrease was the heavy fall in the world prices of raw materials, particularly of cotton and jute. The value of imports showed some slight expansion, being valued at Rs 231 crores as against Rs. 226 crores, an increase of approximately 2 per cent.

Imports.—Imports of cotton piecegoods increased by 224 million yards [illegible] 14 per cent in [illegible] to 788 [illegible] yards, while in va[illegible]e the corresponding increase was only of Rs 51 lakhs or 1 per cent. White goods rose from Rs. 16 crores to Rs. 17½ crores and coloured goods from nearly Rs 16 crores to Rs. 17¼ crores while grey goods, notwithstanding an increase of 39 million yards in quantity, fell from Rs 2[illegible] crores to Rs. 19⅝ crores. Imports of cotton twist and yarn were valued at Rs. 6⅝ crores against Rs 7¾ crores in the preceding year. The imports of sugar increased by 15 per cent in quantity from 805,000 tons to 924,000 tons and by 21 per cent in value from Rs. 16 crores to Rs [illegible]9 [illegible] r In iron and steel th[illegible] quant[illegible]y imported [illegible] by 4 per cent from 884,000 tons to 846,000 tons and the value [illegible]y per cent.

m R 8
and nonwork declined from Rs. 15 crores to Rs. 14 crores. The imports of railway plant and rolling-stock on private account receded from Rs 5 crores to Rs. 3½ crores. *Imports of hardware* and motorcars were valued at Rs. 5 crores and Rs 3 crores respectively, as in the preceding year Mineral oils fell away from 200 million gallons to 183 million gallons in quantity and from Rs 10 crores to Rs. 9 crores in value. The value of imported provisions rose from Rs 4½ crores to Rs 5¼ crores Alizarine and aniline dyes increased in quantity from 10½ million lbs. to 15 million lbs. while in value there was an advance by Rs 27 lakhs to Rs 1,70 lakhs. A larger quantity of foreign cotton was absorbed to 700 tons valued at Rs. 5 crores against 17,500 tons valued at Rs 3¾ crores in the preceding year. Imports of liquors and paper were valued at Rs. 3 53 lakhs and Rs. 2,78 lakhs showing increases of Rs. 13 lakhs and Rs. 28 lakhs respectively over imports in the preceding year

Exports.—The total value of raw cotton and cotton manufactures exported fell from Rs. 103 crores to Rs. 70 crores Raw cotton declined by 24 per cent. in quantity from 743 000 tons to 580,000 tons and by 38 per cent in value from Rs. 95 crores to Rs. 58¾ crores. Raw jute increased in quantity by 9 per cent. from 647,000 tons to 708,000 tons but, as the previous year's high range of prices was not maintained, decreased in value by 29 per cent from Rs. 38 crores to Rs 26¾ crores Exports of gunny bags and gunny cloth also increased in quantity, while the value realised fell. The total value of raw jute and jute manufactures shipped fell from Rs. 97 crores to Rs. 80 crores Exports of foodgrains fell from 3 063,000 tons to 2 420,000 tons in quantity and from Rs. 48 crores to Rs. 39 crores in value. Shipment of rice fell from 2,549,000 tons valued at Rs. 39¾ crores to 2,035,000 tons valued at nearly Rs. 3½ crores and of wheat from 212,000 tons valued at Rs 3¾ crores to 176,000 tons valued at Rs. 2¼ crores. Exports of barley and pulse also decreased Tea showed an improvement shipments increasing in quantity by 23 million lbs. and in value by Rs 2 crores to 349 million lbs valued at Rs. 29 crores. The total quantity of oilseeds exported again decreased by 412,000 tons to 838,000 tons while the value of the shipments fell by Rs. 10½ crores to Rs. 10 crores

Balance of Trade—The balance of trade in merchandise in favour of India which reached the record figure of Rs. 161 crores in 1925-26 fell to Rs. 79 crores. As might be expected therefore there was a contraction in India's absorption of the precious metals, the net imports of treasure being Rs. 39 crores against Rs. 52 crores in the preceding year. The net imports of gold amounted to nearly Rs 19½ crores or Rs. 15¼ crores less than in 1925-26 while the net imports of silver showed a small increase of Rs. 3 crores from Rs. 17 crores to Rs. 20 crores owing to reduced shipments of white metal to China.

Index Numbers.—The trend of prices in India and abroad, particularly in the United Kingdom, Japan and America, India's three best customers, was, on the whole, downward, in spite of large increases in the prices of certain commodities affected by the coal strike in the United Kingdom Th i fl uence of the coal w h w ff b h al es of raw cotton and textile goods. The "Statist" wholesale price index number fell from 136 ? to 123.5, the Bank of Japan from 238.9 to 2 ? ?, and in the United States of America the Bradstreet's index number from 12.9 to 12.5. The index number of wholesale prices in Calcutta fell from 149 to 146.

Rupee Exchange.—The sterling value of the rupee was in the neighbourhood of 1s. 6d throughout the year, the highest and lowest quotation for telegraphic transfers on London being 1s 6 1/32d and 1s 5 ¾d, respectively. At times however, the rate showed a tendency to weaken and on one occasion in December, 1926 the Government of India had to resort to selling sterling on London, to keep rates on the 1s. 6d basis These sales amounted to £1,425 000 during the year and were made at the rate of 1s. 5¾d. to the rupee.

Bank Rates—In the money market, conditions were exceptionally easy. In the beginning of the year the Imperial Bank of India rate stood at 6 per cent, but dropped to 5 per cent on the 20th May. For the six months from June to the end of December the rate remained at 4 per cent. Thereafter seasonal demands for money combined with special reasons for hesitancy in the exchange market led to a gradual rise in the Bank rate to 7 per cent. on the 9th February 1927, which was maintained until the close of the year.

Government of India Paper.—The following figures which compare the price and yield per cent of 3½ per cent. Government of India paper on or about 1st April during the past twelve years show how greatly India's credit has improved within recent years :—

	Price.	Yield per cent.
	Rs. a	
1916 . ..	81 4	4 3
1917 . .	69 0	5 1
1918 .	67 0	5.2
1919 ..	71 0	4 9
1920 . .	60 0	5.8
1921 ..	56 0	6.2
1922 .. .	55 8	6.3
1923 . .	61 0	5.7
1924	67 0	5 2
1925 .	67 14	5 2
1926	74 6	4.7
1927	78 11	4 4

Tariff Changes.—Certain minor changes in the tariff were introduced with effect from April 1926, such as the removal of the import duty on stick or seed lac and hay-presses, the reduction of the rates of duty on saccharine and saccharine tablets and on certain items of textile machinery and the imposition of specific duties in place of *ad valorem* duty of 15 per cent. on portland cement and on mineral oils used for batching and for lubrication. These were fully dealt with in last year's review. The improvement in financial position enabled the Government of India to effect important reductions in customs duties with effect from 1st March 1927 The import duty on motor cars has been reduced from 30 per cent to 20 per cent, *ad valorem* and on tyres from 30 per cent to 15 per cent with a view to encouraging the development of motor transport in India The import duty of 15 per cent on rubber seeds and a pmps has been a he special

representation of the Government of Burma, in order to assist rubber cultivation. The export duty of Rs. 1-8 per 100 lbs. on tea has also been abolished and measures have been taken to compensate for the loss of revenue arising therefrom by making the whole of the non-agricultural income of the tea companies liable to income-tax. On the other hand the import duty on unmanufactured tobacco has been raised from Re. 1-0 to Rs. 1-8 per lb. The other important changes introduced were made in pursuance of the Steel Industry (Protection) Act, 1927, which was enacted on the recommendations of the Tariff Board

Tariff Board's Report on the Steel Industry in India—The Steel Industry (Protection) Act, 1924, which granted protection to the Indian steel industry, was due to expire on the 31st March 1927. As provided in that Act, the Tariff Board was directed to make a fresh enquiry as to the necessity for further continuance of protection, and the degree of protection required. They accordingly made a very careful examination of the whole position in 1926 and submitted a report to the Government of India recommending the continuance of protection on certain lines for a further period of seven years. The system of bounties was to be abolished and the protection was to be afforded by means of customs duties only. The Board proposed a double scale of duties, a basic duty fixed with reference to the price of British steel and leviable on steel coming from all countries and an additional duty based on the difference between British and continental prices and leviable on non-British steel only. In their opinion this was necessary in order to secure an equitable distribution of the burden over the different classes of consumers and to ensure the stability of the scheme of protection. They also recommended that the basic duty should not be modified until after a statutory enquiry to be held not earlier than 1933-34, but suggested that the Governor General in Council should be vested with power to vary the additional duty in either direction on a consideration of variations in the price of non British steel. The Board proposed very little material change in the list of protected iron and steel manufactures except that in the case of plates and sheets the protection was proposed to be extended to chequered plates and to sheets of all descriptions excluding those coated with metal other than tin or zinc. In the case of tin plates the protective duty was to be reduced from Rs 85 to Rs 48 per ton.

The Government of India accepted the main recommendations and introduced a bill in the Indian Legislature to give effect to them. The Bill was accepted by the legislature and came into force on the 1st April 1927. The duty on unwrought zinc was also removed from 1st April 1927.

II.—IMPORTS OF MERCHANDISE.

Cotton manufactures (Rs. 65,05 lakhs)—The import figures showed advances over the previous year's figures in all the principal items except cotton twist and yarn. The year did not, however, fulfil, in the measure expected the hopes of a brisk re[illegible]al of trade that w[illegible] re [illegible] [illegible]tained during [illegible]he [illegible]arly part of [illegible]928 During [illegible] first three [illegible] o[illegible] the year the tendency generally was to buy only for immediate requirements and in view of the falling market in raw cotton this attitude was fully justified The import trade took a more buoyant turn towards the latter part of the year and during January and F[illegible]b[illegible] a fair [illegible]olume of orders was placed with the Lan[illegible]ashir[illegible] mills.

... different classes of imported cotton manufactures during the past four years and during the pre-war 1913-14. When comparing the 19... value figures with those of the previous year, it should be remembered that the purchases in 1926-27 were made on a much lower basis.

Cotton Twist and Yarn (Rs 6,62 lakhs)—The imports under this head registered a still further fall both in value and in quantity review. The total quantity imported amounted only to 49 million lbs. as against 56 millions in 1924-25 and 52 millions in 1925-26. The value of the imports was only Rs. 6,62 lakhs as compared with Rs. 77,7 lakhs.

The production of yarn in Indian mills reached a record figure of 807 million lbs while the imports, which receded to 49 4 million lbs., showed a fall of 4 per cent, as compared with 1925-26 and of 12 per cent, as compared with 1924-25.

The United Kingdom's share in the total trade n Cotton wist and yarn f om 3 pe cent. in 1925-26 to 41 per cent. Japan's share receded from 65 per cent. to 54 per cent.

Cotton Piece-goods (Rs. 55,01 lakhs).—The total imports of piece-goods, including fents, during 1926-27 showed an increase in quantity of 224 million yards over the previous year of 14 per cent, but the corresponding increase in value was only Rs 51 lakhs or 1 per cent. White goods contributed most to the increase, the imports rising by 106 million yards to 571 million yards, while coloured goods showed an increase of 82 million yards and grey goods of 39 million yards. In value white goods increased from Rs 15,99 lakhs to Rs 17,53 lakhs and coloured, printed and dyed goods from Rs. 15,92 lakhs to Rs 17,22 lakhs but grey goods declined from Rs 21,89 lakhs to Rs. 19,62 lakhs as the ... quantity was not sufficient to com... te o the fall in prices

preceding year. It was a rise of 6 per cent. in quantity but a fall of 5 per cent. in value, owing to a drop in prices.

Artificial Silk (Rs. 4,22 lakhs).—The market for artificial silk in India is steadily expanding. From 1924-25 the rate of increase in the imports has been very rapid. As compared with the previous year imports of artificial silk yarn during 1926-27 showed a remarkable rise of 116 per cent. in quantity and 37 per cent. in value. Italy forged ahead of her competitors and supplied 3,843,179 lbs against 392,688 lbs. in 1924-25, and 1,309,257 lbs. in 1925-26. The United Kingdom lost ground slightly, her consignments falling from 761,000 lbs. to 655,000 lbs. In imports of piece goods of cotton and artificial silk also there was a substantial rise, the consignments increasing from 15 million yards to nearly 42 million yards.

Imports of sugar of all sorts, excluding molasses and confectionery, still further increased and amounted to 826,900 tons, a rise of 13 per cent. over the preceding year, and 23 per cent. as compared with 1924-25. The value of the imports rose by 21 per cent. to Rs 18,37 lakhs. Sugar ranked second in importance in the list of imports while in the preceding year it had taken but the third place. A feature of the imports during the year was the increase in the takings of beet sugar partly at the expense of Java sugar. This is attributable to the firmness of the Java market as a result of a poor outturn in 1926-27.

The total area under sugarcane in India advanced from 2,679,000 acres in 1925-26 to 2,9?0,080 acres in 1926-27 and the total production of raw sugar (*gur*) from 2,977,000 tons to 3,208,000 tons.

The production of sugar by modern factories and refineries in the season 1925-26, amounted to 90,270 tons as compared with 67,400 tons in 1924-25 and 94,700 tons in 1923-24.

Metals and Manufactures thereof—(Rs. 23,82 lakhs).—The imports of metals and manufactures thereof decreased by 4 per cent. in quantity from 945,000 tons to 909,000 tons and by 6 per cent in value from Rs. 25½ to nearly Rs 24 crores.

Iron and Steel.—(Rs. 16,73 lakhs.)—The year 1926 witnessed the prolonged coal strike in the United Kingdom, a strike which had virtually paralysed the iron and steel industry of Great Britain.

These facts had their influence on the Indian trade returns. The supplies from the United Kingdom were restricted throughout the period of stoppage and a larger proportion than usual of the Indian import trade went to Germany and Belgium.

Manufactured iron and steel imported (excluding pig and old iron or steel) decreased by 5 per cent. in value from 879,000 tons to 838,000 tons and by 7 per cent. in value from Rs. 18,03 lakhs to 16,70 lakhs.

The noticeable feature of the year's trade was the high proportion of the imports from the Continent, Belgium supplying 257,000 tons or 30.4 per cent and Germany 79,000 tons or 9.3 per cent. as compared with 220,000 tons (25.9 per cent.) and 30,000 tons (?-8 per cent.) respectively in 1925-26.

Other Metals.—(Rs. 7,06 lakhs).—Imports of metals other than iron and steel and manufactures thereof increased in quantity from 62,000 tons to 64,000 tons but decreased in value from Rs 7,28 lakhs to Rs. 7,06 lakhs.

Machinery and Millwork (Rs. 14,60 lakhs).—The engineering industries of the United Kingdom which were able to work on previous stocks or on imported material were less seriously affected by the coal stoppage than was expected. In the year the imports of all kinds of machinery (including belting for machinery and printing presses) receded to the fourth place in order of importance in India's import trade, and were valued at Rs. 14,60 lakhs as compared with Rs 15,87 lakhs in 1925-26.

Railway plant and Rolling Stock (Rs. 6,09 lakhs).—Imports on private and Government account combined under this head which, since 1st April 1925, excludes rails, chairs, fishplates etc., were valued at Rs 6,09 lakhs (Rs. 3,26 lakhs private and Rs. 2,83 lakhs Government) as compared with Rs. 8,14 lakhs (Rs. 5,99 lakhs private and Rs. 3,15 lakhs Government) in 1925-26.

Motor Vehicles (Rs. 5,09 lakhs).—The increase in the imports of motor vehicles was well maintained. Lower prices stimulated the growing motor car habit and the further extension of motor transport in India. With the improvement of the financial position of the Government of India it has been found possible to reduce the rate of duty on motor cars from 30 per cent *ad valorem* to 20 per cent. *ad valorem* and on pneumatic tyres and tubes to 15 per cent *ad valorem* with effect from 1st March 1927. The absence of a net work of good roads and the limitations on the loads allowed on bridges are two important factors which still operate against the more rapid development of motor transport in India. The number of motor cars imported rose by 3 per cent, from 12,757 in 1925-26 to 13,197 in 1926-27 and their value by 4 per cent. from Rs. 2,82 lakhs to Rs. 2,94 lakhs. The British light car is steadily growing in popularity and advancing its position in the market although Canada and the United States of America still maintain their predominant place in this trade.

The total value of the imports of hardware excluding cutlery and electroplated ware decreased slightly from Rs. 5,20 lakhs to Rs 5,07 lakhs in 1926-27. The reduction is particularly noticeable in the imports of metal lamps, while implements and tools and builders' hardware recorded an increase. The other items specified have remained fairly constant during the last two years.

Mineral Oil. (Rs. 8,89 lakhs).—Mineral oils imported into British India comprise mainly kerosene oil, fuel oils and lubricating oils. The total imports of all kinds of mineral oils from foreign countries declined to 184 million gallons valued at Rs 8,89 lakhs from 200 million gallons valued at Rs 10,05 lakhs in 1925-26. This represented a fall of 8 per cent. in quantity and 11 per cent. in value.

Provisions. (Rs. 5,50 lakhs).—The total value of imported provisions rose by Rs. 85 lakhs from Rs 4,65 lakhs in 1925-26 to Rs. 5,50 lakhs in 1926-27. Almost all the principal items included under this head [illegible] and

bottled provisions farinaceous and patent foods condensed milk, biscuits and cakes, cocoa and chocolate, butter and ghee contributed to this increase.

Liquors (Rs 3,53 lakhs).—The total quantity of foreign liquors imported rose by 10 per cent. from 5,695,000 gallons in 1925-26 to 6,261,000 gallons in 1926-27. In value however, the rise was not proportionate to the increase in the quantity, the total imports being to the extent of Rs. 3 53 lakhs, showing only a 6 per cent increase over that of the preceding year. Of the total quantity of liquors imported consisted of ale, beer and porter, 34 per cent of spirits and 5 per cent. of wines, etc.

Paper and Pasteboard (Rs. 3,08 lakhs).—The quantity of paper and pasteboard imported rose by 15 per cent. from 87,400 tons in 1925-26 to 100,400 tons in 1926-27. In respect of value there was also an increase of 10 per cent. from Rs. 2,81 lakhs to Rs 3,08 lakhs, the prices having remained fairly steady throughout the year.

Chemicals (Rs. 2,44 lakhs).—The value of the imports of chemicals rose from Rs. 2,03 lakhs in 1925-26 to Rs. 2,44 lakhs in 1926-27. Prices of chemicals in the United Kingdom, from which the major share of the imports is drawn, remained remarkably steady throughout the year, in spite of the disturbances caused by the coal strike. As in the preceding year soda compounds accounted for 43 per cent of the total value of chemicals imported in 19 at Rs. 1,05 lakhs as on in 1925-26.

Cigarettes.—The du port duty on cigarett prices had the eff ct trade in cigarettes rose from 3,412,000 lbs to 4,175,000 lbs. valued a 27,

The United Kingdom largest supplier and a n 99 per cent. of the tra le from 3 377 000 lbs val to 4,142,000 lbs val ied a

Jute and Jute Manufa The total weight of jute exported incr ased 1,568,000 tons but the from Rs. 97 crores to lower prices. Of the to raw jute accounted for manufactures 67 per ce and 51 per cent. respe following statement co exported during 1913 1 three years :—

Co..on .R. .8,60 . h , ... accompanied by a record American Indian crop accompanied by a record American crop following on the top of the two large crops of 1925 and 1924 affected the exports of raw cotton from India which fell in quantity by 24 per cent. and in value by 38 per cent. The Indian cotton crop of 1926-27 was estimated at 4,973,000 (400 lbs. each) as compared with 6,250,000 bales in 1925-26 and 6,088,000 bales in 1924-25. The American crop of 1926 was estimated at 18,618,000 bales (23,272,000 bales of 400 lbs. each) exceeding the outturn of 1925 by 2,514,000 bales (3,142,000 bales of 400 lbs. each). The Egyptian crop of 1926 was estimated at 1,789,000 bales (of 400 lbs. each) as compared with 1,946,000 bales in 1925 and 1,797,000 bales in 1924.

Cotton Manufactures—(Rs. 10,75 lakhs).—The appointment of a Tariff Board to enquire into the condition of the textile industry to examine the causes of depression and to report on the measures required for alleviation, was mentioned in last year's review. The Board whose report has recently been published has found that the depression is to a large extent due to world causes. In India itself the depression has been more acute in Bombay than in other centres, and this is attributed partly to causes for which the mill-owners themselves are responsible, partly to the competition of Japan and partly to the competition of mills in other parts of India, which are favoured by proximity to raw material and consuming markets and cheaper labour supply. Under the first head they lay stress on the undue conservatism of the industry and insufficient diversification of production. The Board also found that the industry in India is placed in an unfair position *vis a vis* Japan, owing to the inferior conditions of labour prevailing at present in that country. The majority of the Board recommended, among other things, a bounty for a period of four years, of 1 anna per pound or its equivalent on the spinning of higher counts of yarn, based on the output of an average of 15 per cent. of the total working spindleage in a mill. They also proposed an additional duty of 4 per cent. on all imported cotton piecegoods. The Government of India in their resolution on the report have disagreed with the necessity for a bounty on the spinning of high counts of yarn, as a long established industry, such as the cotton textile industry in Bombay, should need no stimulus at the cost of the general taxpayer if such a development is in its own interests. They also consider that the advantage which Japan has over India in the manufacture of piecegoods on account of inferior labour conditions is sufficiently covered by the existing revenue duty of 11 per cent. on imports. They have, however, agreed to introduce legislation with a view to remove, in pursuance of the recommendation of the Board, the import duty on machinery and certain mill stores, for a period of three years subject to certain conditions *e.g.* the desirability of encouraging the manufacture in India of such machinery or stores; and legislation in order (1) to modify the import duty on cotton yarn from 5 per cent to 5 per cent. or 1½ annas per pound whichever is higher, and to reduce the import duty on artificial silk yarn and thread from ... per cent ... per cent. The ... proposals of the Tariff Board are still under consideration.

Cotton Yarn (R. . 09 ... ...). T.. p..d ction of yarn in Indian mills in 1926-27 totalled 807 million lbs. as compared with 687 million lbs in 1925-27 and 719 million lbs 1924-25 and 683 million lbs. in 1913-14.

Exports of yarn increased from nearly 32 million lbs to 41½ million lbs. The average exports in the five years ending 1913-14 were 193 million lbs., while the average for the quinquennium 1914-15 to 1918-19 was 130 million lbs. and of the post-war quinquennium 82 million lbs.

The total production of piecegoods in Indian mills in 1926-27 showed a noticeable increase of 16 per cent. in quantity as compared with the previous year. The proportion of the exports of piecegoods to the total production was, however, very nearly the same as in 1925-26 the percentages being 8.7 in 1926-27 and 8.4 in 1925-26 as compared with 9.2 in 1924-25.

Foodgrains and Flour—(Rs. 39,25 lakhs). Foodgrains, pulse and flour contributed a still smaller share to the export trade of the country. Compared with the average annual shipments in the pre-war quinquennium, the exports registered a decline in quantity of 45 per cent. while as compared with 1925-26 the quantity fell by 21 per cent. and the value by 18 per cent. The total exports during the year amounted to 2,429,000 tons valued at Rs. 39¼ crores as compared with 3,063,000 tons valued at Rs. 48 crores in 1925-27. All the important items showed decreases, rice not in the husk falling by 514,000 tons or 20 per cent. wheat by 36,000 tons or 17 per cent. while exports of barley were only 1,600 tons compared with 42,000 tons in the preceding year. Pulses declined by 21,000 tons to 118,000 tons.

Tea—(Rs. 29,04 lakhs). The total production of tea in India in 1926 is estimated at 393 million lbs. as compared with 364 million lbs. in 1925 and 375 million lbs. in 1924. Assam as usual contributes the largest share, her outturn being 62 per cent. of the total production, while Northern India excluding Assam contributes 25 per cent. and Southern India 13 per cent. The total area under tea in 1926 was 740,000 acres against 728,000 acres in 1925.

Oilseeds (Rs. 19,09 lakhs).—The exports of oilseeds showed a large decrease of 33 per cent. in quantity from 1,250,000 tons in 1925-27 to 838,000 tons in 1926-27, while in value there was a drop of 36 per cent. from Rs. 29,64 lakhs to Rs. 19,09 lakhs.

Hides and Skins (Rs. 14,53 lakhs).—The export figures under this head show no striking variations. Shipments of raw hides and skins amounted to 50,627 tons which was only 200 tons less than the exports of the previous year. Fifty five per cent. of the exports under this head consisted of raw hides which amounted to 27,800 tons valued at Rs. 2,57 lakhs as compared with 28,400 tons valued at Rs. 3,21 lakhs shipped in the preceding year.

Metals and Ores (Rs. 7,21 lakhs).—The total exports ... ores ... ted to ... 584,000 tons ... 926- or 1 ... 000 ... less than in the preceding year.

The Foreign Sea-borne Trade of British India durin
(1864-69 to 1919-24): Quinquennial avera

(PRIVATE AND GOVERNMENT)
M[illegible]ng[illegible]ne[illegible]e O[illegible]e [illegible] ore which represents about [illegible] per cent. of the total quantity of ores exported decreased from 64,000 tons to 436,000 tons in quantity and from Rs. 1,54 lakhs to Rs. 1,49 lakhs in value.

Coal—(Rs. 81 lakhs). The arrangement made for the grading of coal and the grant of certificates for coal intended for export referred to in the previous year's review helped the Indian coal trade to recover slowly from the effects of competition and to strengthen its position in adjacent markets. It also received an unex[illegible] year [illegible] shortage caused by the prolonged coal strike in the United Kingdom. The prices realised were not very attractive but they helped to clear the accumulated stocks. Exports of coal rose by 168 per cent. in quantity from 240,000 tons in 1925-26 to 643,000 tons in 1926-27 and by 134 per cent. in value from Rs. 34½ lakhs to Rs. 81 lakhs.

Re-Exports.—The total value of foreign merchandise re-exported showed a further decline to Rs. 8 crores from Rs. 10¼ corres in 1925-26 and Rs. 13½ crores in 1924-25.

The Indian Stores Departm

The Indian Stores Department was instituted on 1st January 1922, after a specially appointed officer had during the preceding year investigated its possible sphere of work. The Government of India nearly half a century previously enunciated the policy of purchasing for State use stores of indigenous origin or manufacture rather than stores produced or manufactured abroad and for many years before the creation of the new department the rules governing stores purchase for public departments prescribed that subject to certain conditions as to quality and so forth preference should be given to articles manufactured wholly or in part in India. Revisions of these rules to make them better serve the purpose for which they were drafted were from time to time made but as Indian industrial development progressed and as Indian nationalism increased complaints that the policy presumed to be embodied in the rules was not in effect carried out grew in volume The Indian Industrial Commission found that the industrial resources of the country were far from sufficiently utilised by Government Departments but that the reason was not due to restrictions in the stores purchase rules but to the failure of the Departments fully to avail themselves of the scope which the rules offered. They [illegible] to lack of inf[illegible] as to [illegible] and market values of supplies and to the absence of

agencies and they con expert agency for the of stores required should be established Committee which the appointed to advise t unanimously supported and Government with Secretary of State accep recommendation. The ment was thereupon in

Organisation.—The of the Stores Departme January 1922 included.

A Chie[illegible] o

A I[illegible] of Inspe

A [illegible] of Purch

A Director of Textiles Purchase.

An Assistant Chief Controller.

The designation of the Director of Textiles Purchase was early changed to Deputy Director of Purchase (Textiles) and within the first year an Assistant Controller of Textiles Purchase was appointed. The Departments growth has thus from its beginning constantly broadened and accelerated. The preliminary organisation was instituted temporarily but the department and its organisation were before the end of 1922 put on a permanent basis. The offices of Superintendent of Local Manufactures and Government Test House at Alipur and of the Metallurgical Inspector at Jamshedpur, hitherto under the direct administration of the Industries and Labour Department, were in July 1922 absorbed in the new organisation.

The Functions of the new Department were early indicated as being—

(a) To act, subject to certain limitations, as a [illegible] ncy and in an ad- [illegible] connected with the [illegible] idest sense for the public service on behalf of all Central Departments of Government and of the minor Local Governments and also on behalf of such major Local Governments, company worked railways, Corporations, Port Trusts, Municipalities and similar quasi-public bodies and Indian States as may desire to avail themselves of its assistance;

(b) To scrutinise the Home indents of all Central Departments, minor Local Governments and such other authorities as utilise its services with a view to ensure attention to the encouragement of Indian industries, so conducting its operations in this respect as to prevent the purchase of articles of non-Indian manufacture when goods of indigenous production of suitable quality and price are obtainable;

(c) To purchase and inspect in India for central departments and other buyers on the lines above indicated certain specified commodities;

(d) To inspect stores purchased otherwise than through the agency of the department;

(e) To draw up for the approval of departments and others which effect their purchases through the department specifications of the various classes of stores in demand and if so desired to advise and assist departments and others which make their own purchases in the preparation of specifications and the standardisation of patterns;

(f) To act as a central bureau of information on all matters affecting the purchase of stores and their prices, particularly with reference to the extent of Indian manufactures and their capacity from time to time.

In order to secure the benefit of the accumulated experience of over sixty years of purchase and inspection work in the foremost markets of the world which had been acquired by the India Store Department in London, advantage was tak n of the presence of the Director of [illegible] and [illegible] on leave in England [illegible] d pute him to examine the system in force in the London organisation with a view to the embodiment of what was useful to the Indian Stores Department in its organisation and methods. It was at the outset decided that the Department should be quasi-commercial and self-supporting, charging a small percentage upon the cost of its purchases and other minimum fees in other branches of activity to defray its establishment and other costs.

Past Year's Work.—By 1925 the Department had become represented in most of the chief industrial and commercial centres of India had attracted a fairly large clientele and was conducting operations on a large scale. The latest report on its operations, that for the financial year 1926-27, shows that during that year the value of the purchases effected by it was Rs 3,98,82,000, which was an increase of 45 per cent. on the figure for the next preceding year. In the case of textile goods those purchased in India represented 97 per cent of the total. The bulk of the purchases of engineering and allied stores was, as they have always been, of articles of overseas manufacture. A development in this respect recently made is an arrangement with the Consulting Engineers of the High Commissioner in London for them to open a branch in India. Government will bear the overhead charges involved in this, but will otherwise pay the engineers nothing for their work, and the development will place at the disposal of the Stores Department the Consulting Engineers' expert knowledge and acquaintance of world markets and foreign manufacturing firms in regard to heavy engineering supplies, such as railway engines, great bridge-work and so forth. This will enable the Stores Department to take over from the High Commissioner and the Indian Store Department under his control in London the purchase of these heavier supplies and to develop their adopted policy of inviting tenders in terms of rupees in India instead of in sterling in London.

The numbers of Europeans and Indians holding gazetted appointments in the Department at the end of 1926-27 were 29 and 24 respectively. The number of authorities, comprising not only Departments of the State, both Central and Provincial, but also public bodies such as Company railways and Municipalities, Indian States and a number of private firms, availing themselves of the services of the Department is rapidly increasing. A number of the major Provincial Governments have promulgated rules for the purchase of stores and most of these provide for the utilisation of the Department. The Central Provinces have designated the Department one of the agencies to be employed and the Governments of Bengal and the Punjab have appointed the Department their sole purchasing agency. The Government of Bombay have prescribed that all purchases in India above Rs. 500 in value, whether of indigenous or imported stores, except plant and machinery and component parts shall normally be made through the Department. They have also directed that all indents upon the Indian Store Department in London shall be forwarded through the Indian Stores Department.

Investigations are continually made by the Department into the potentialities of Indian sources of supply. The list of approved contractors was in 1926-27 increased by 278 and application for registration from 109 other firms were rejected. During the same year 1928 indents on the India Store Department, London, of an estimated value of Rs 8,81,53,278, were received for scrutiny. The growth of the revenue of the Department has recently exceeded that of its expenditure and as a result there was in 1926-27 a marked decrease in the net deficit on revenue account, which in 1926-27 stood at about Rs 29,500 as compared with about Rs 2-15 lakhs in the last preceding year. The expenditure included in this calculation does not include pensions and contributions to provident fund, rents of Government buildings, cost of printing and stationery and certain other indirect charges and it is therefore calculated that considerable increase in the volume of business done must take place before the Department can be self-supporting in the true sense of the term.

Trust, Declaration of—Same duty as a Bond for a sum equal to the amount or value of the property concerned, but not exceeding	
Revocation of—Ditto, but not exceeding	
W *for Goods*	

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of the Indian Year Book. The Congress was founded in 1885 by Mr. Allan Octavian Hume, a retired member of the Indian Civil Service, and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be:—

Firstly, the fusion into one national whole of all the different aid discordant elements that constitute the population of India;

Secondly, the gradual regeneration, along all lines, mental, moral, social and political of the nation thus evolved; and

Thirdly the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country.

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focussing the chief political grievances, and in providing a training ground for Indian politicians. But in 1907 the Extremists, chiefly of the Deccan and the Central Provinces, who had for some time chafed under the control of the older generation, succeeded in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-crystallised its creed in definite terms. They laid down that—

"The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire, and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country."

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Babu Ambica Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial; the difference between the Moderates and the Extremists was fundamental; the Extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr. Gandhi.

THE NON-CO-OPERATION MOVEMENT.

It was in 1920 that Mr. Gandhi, who had only in the previous year unsuccessfully started his Passive Resistance struggle as a protest against the Rowlatt Act, conceived his idea of non-co-operation. Originally intended to be a protest against the British policy towards Turkey, the "fighting" of two other grievances was later on added to its first object, namely, the punishment of officials in the Punjab Martial Law regime and the securing of Swaraj for India. Mr. Gandhi and Mr. Shaukat Ali were able in 1920 to get the Calcutta Special Congress to endorse their programme of "progressive non violent non-co-operation" which was reiterated by the annual session at Nagpur, which, on Mr. Gandhi's motion, changed its old creed into "the attainment by India of Swaraj by all legitimate and peaceful means." The stern measures adopted by local Governments led to the imprisonment of a large number of active Congressmen with the result that the Ahmedabad Congress in 1921 made a "grim resolve" to challenge the "repression movement" by appointing Mr. Gandhi as dictator and by resolving to start a "No Tax" campaign at Bardoli. The riots in Chauri Chaura in 1922, preceded by the Bombay riots in 1921 during the Prince of Wales' visit (see 1923 and 1924 editions of this book) opened Mr Gandhi's eyes to the impossibility of maintaining a non-violent atmosphere under exciting conditions. He suspended his proposed civil disobedience campaign and replaced it by what is known as the Bardoli Prog[illegible]e which suspended all the aggressive items of non-co-operation in favour of the promotion of inter-communal unity and khaddar. Soon after Mr. Gandhi was arrested for sedition, tried and sentenced to undergo imprisonment for six years (See 1923 and 1924 editions.)

This turn of events threw cold water on the enthusiasm of non-co-operators who got discouraged. In order, therefore, to sound the country's readiness for aggressive action once more, the All-India Congress Committee appointed a Committee, known as the Civil Disobedience Committee, in June 1922. The Committee toured the country and in October, 1922, produced two reports, one favouring Council entry to offer obstruction to Government and the other recommending the adoption of the Bardoli programme. A battle royal ensued between the two parties at the Gaya Congress. The anti-Council Party won the day and the Councilites, led by the Congress President, Mr. C R Das, formed the Swarajya Party in order to push their own Council programme. The Swarajya Party by its continuous propaganda gained considerable support in the country [illegible] of public [illegible] on Coun[illegible] a large number of seats in various provincial Councils and in the Assembly. The annual Congress at Cocanada, under the presidentship of Mr Mahomed Ali, put an end to the Council entry controversy

THE CONGRESS IN 1924-26.

The Congress had an eventful career in 1924. Mr Gandhi, who had an attack of appendicitis of a serious form in the Zerowda Jail, was released by the Government of Bombay. Immediately, the No-Changers revived their hopes of fighting the Swarajists to a finish. After nearly six weeks' discussion, in May, 1924, Mr. Gandhi definitely dissociated himself from the Council Programme and the Swarajist obstructive policy; while the Swarajist leaders in a separate statement defended their policy. Public controversy again centred round the Council question. In the meanwhile, the Government of Bengal with the sanction of the Governor-General promulgated an Ordinance in order to check the forces of the growing revolutionary movement in Bengal. Under this Ordinance and under Regulation III of 1818 they effected several arrests including a few Swarajists. Mr. Gandhi went to Calcutta and, after a series of consultations with the Swarajist leaders, drew up what is now known as the Gandhi-Swarajist Pact by which Mr. Gandhi agreed to suspend the non co-operation movement and to recognise the Swarajists as the accredited representatives of the Congress on legislative bodies, while in return the Swarajists agreed to his spinning franchise which laid down 2,000 yards of hand-spun yarn every month as the subscription to Congress membership instead of the four annas a year as decided by the Nagpur Congress.

The Congress which met at Belgaum during Christmas week under Mr. Gandhi's presidency endorsed the Bengal Pact. Among the other resolutions passed by the Congress was one suspending the non-co-operation programme. Thus the movement received its final burial at the hands of the very author of its being. The policy of the Congress executive during the first half of 1925 was one of aimless drift. The death of Mr. C. R. Das demoralised the Swarajists. Mr. Gandhi promptly went to their rescue and at the end of the year the Swarajists' political programme was formally adopted by the Cawnpore Congress. Of a more far-reaching character was the split that occurred in the ranks of the Swarajists themselves at Cawnpore. Messrs Jayakar and Kelkar from Bombay and Dr. Moonje from the C. P. registered their emphatic protest and resigned their seats on the Legislatures professing thereby to liberate themselves from the Swarajist obligations and desiring to be free to propagate their own cult of Responsive Co-operation and acceptance of office.

The Responsive Co-operators, who had in the meanwhile strengthened their position and secured appreciable support to their creed of co-operation when possible and opposition when necessary, led the country's attack on the Swarajists.

The elections came and went. Generally speaking the Swarajists were ousted. What with the defeat sustained by the Congress [illegible] in the and the strength of the communal organisations the premier political organisation in the country namely, the Congress, lost its prestige considerably.

It was in this atmosphere that the 41st session of the Congress was held in Assam during Christmas week in 1926. After much heated discussion the Congress set its face against the acceptance of ministerships or other offices in the gift of the Government and approved of the policy of rejection of budgets and refusal of supplies until a response to the "national demand" was forthcoming. The hardy annual in the shape of a resolution setting complete independence as the goal of the country was opposed by Mr. Gandhi himself, and turned down by a large majority. The Congress fought shy of Hindu-Moslem dissensions although they had assumed serious proportions during the year and relegated them to the working Committee of the Congress.

Congress in 1927.

The year's Congress activities bore distinct traces of the character of the President, Mr S Srinivasa Iyengar—in particular, his inordinate ambition to glorify his presidency by the achievement at any price of communal and political unity and his general weakness resulting from a desire to placate opponents, humour friends and please all. It was an impossible task and impossible it proved to be. The decision of the Gauhati Congress against the acceptances by Congressmen of ministerships definitely alienated the Responsivists. The Liberals were claiming the Responsivists who were still in the Congress but not of it. While the political influence of the Congress in the country was confined to the handful of Swarajists with their dull and destructive tactics, the communal tension was worsening day by day leading to alarmingly frequent outbreaks of riots and minor disturbances. Every Hindu procession particularly in Northern India, and every Mahomedan festival became a "head-line event" and it was with much relief that one read " . . . . passed off quietly." This communal antagonism was doubtless a disquieting feature of the country's advance and the leaders were not blind to it But frantic efforts were productive of no more than pious paper resolutions which were broken before the ink had dried. The year was full of such instances.

The first move of importance in the direction of communal unity was what were known as the Delhi proposals, which a body of leading Mussulmans gathered at Delhi offered at the instance of Mr. Jinnah to the Hindu community It was thought that the quarrels between the two communities were ultimately traceable to the existence of separate electorates, hence it was sought to abolish them. Although a minority community, the Mahomedans, according to the Delhi proposals, agreed to joint electorates with reservation of seats, provided Sind was constituted a separate province and Reforms were introduced in the N. W. F. Provinces and Baluchistan. The proposals met with mixed reception opinion being divided even inside the

Congress Camp. The Responsivists, almost all of whom are ardent supporters of the Hindu Mahasabha principles, were unwilling to accede to the conditions under which the separate electorates were surrendered. Their attitude stiffened up the wavering Mussalmans into withdrawing the offer. Ultimately, however, the proposals were formally accepted by the All-India Congress Committee which met in Bombay, not without mental reservations on the part, perhaps, of everyone concerned. The leaders called it a red letter day in the Congress annals, declared that Hindu-Moslem unity had been achieved and fancied Swaraj was within reach. A short while later riots broke out, if only to demonstrate the hollowness of the pact.

More contentious than this was the issue of political unity which Mr. Iyengar had set himself to establish. Early in the year he toured Maharashtra, the stronghold of Responsivism and was evidently impressed with their argument that acceptance of ministry would be to the good of the country. Presumably Mr. Iyengar himself shared that view inasmuch as he was anxious to secure the Congress seal for a course of action which Swarajists in his own Province were clamouring for. It was clear that the Swarajists in the Madras Legislative Council were not inimical to the Independent Ministry which they had helped to bring into existence but which they were prepared to throw overboard and replace the moment the Congress ban was lifted. No wonder that the die-hards accused the Madras Swarajists, not excluding the Congress President, of being traitors to the Swarajist creed and of being Liberals in Congress cloak. Most of the Congressmen, like the country, had become sick of Swarajism and only too much aware of the futility of its practice and had come to realise that the next logical step was to try to work diarchy and show its unworkability to the Statutory Commission. The Congress President was vacillating, but Pandit Nehru was a diplomat. Rather than risk a defeat at the hands of the die-hard Congressmen and incidentally reveal to the country that he was deviating from the heroics and bravado of Swarajism the President chose to shelve the question of political unity with the connivance of the Responsivists but in the teeth of die-hard opposition. But this would not do, for the smouldering fire of die-hard resentment against the President's vacillation broke out into open attack. This was precipitated by a decision reached by the Congress Working Committee markedly Responsivist in tone on the question of the acceptance of ministry. The Assam Congress resolution was so modified that not only did uniform opposition to the ministry cease to be Congressmen's duty but the question whether Congressmen should support or oppose the ministry was also left to be decided by the Congress parties in the Legislatures concerned.

This was too much for the die-hards who, though small in number, were literally thirsting for the blood of the Congress President and those responsible for the above-mentioned resolution. A requisition was got up to call a special session of the All-India Congress Committee. The meeting was put off from time to time until it did meet in October at Calcutta. It was so late in the year and such a long time had elapsed since the Working Committee's condonation of the Madras Swarajist's support to the Independent Ministry that the issue was not pressed by the die-hards. The session was rendered lively by the feeling that was generated by the consideration of the conclusions arrived at by the Unity Conference held at the same place earlier. There was a bitter debate marked by a walk out several amendments and numerous points of order. Ultimately the resolutions were ratified and the "era of communal peace" hailed—but almost simultaneously riots broke out at Gaya! As a result, conversions and reconversions were to be allowed and so were music before mosques and cow sacrifice—subject, of course to conditions. It is significant to note that important personalities like Dr. Moonje, Lala Lajpatrai and Pandit Malaviya refused to attend the Unity Conference, while Mr. Gandhi was not even invited.

All the talk and quarrel about the internal affairs of the Congress were set at rest by rumours of the exclusion of Indians from the personnel of the **Royal Commission on Indian Reforms** The major issue drowned all petty controversies. Most of the leaders fancied that it would be an insult to India if Indians were not appointed members of the Commission. Even moderates reputed for their sobriety and reasonableness affected extremism. As feeling ran high in the country, the Viceroy thought it necessary to explain the reasons that induced the British Government to adopt the course—which he later announced—and to remove any misapprehension about the motives behind the decision. His Excellency cancelled a part of his autumn tour and went to Delhi to interview almost all the accredited leaders of the land whom he had invited individually. What took place at the interviews is a matter of speculation, but it is evident from the statement which he issued subsequently and from the adverse comment which was made thereanent, that the Viceroy tried to explain the reasons for setting up a purely Parliamentary Commission but that the leaders persisted in thinking that it was a studied insult to India. The Viceroy's statement pointed out how it was impossible to secure adequate representation for the various and warring political and communal interests of India without making the Commission unwieldy set out the advantages of an inquiry by eminent Parliamentarians free from prejudices and opinions formed earlier and explained the difficult position in which Parliament would find itself if confronted with conflicting reports which a mixed Commission was bound to lead to But the leaders would not listen to reason. The explanation in Parliament that the Government of India Act of 1919 contemplated the setting up only of a Parliamentary Commission was turned down as specious argument. Even an earnest attempt on the part of the ex-Labour Premier to show to Indians the unique and unprecedented advantage of their Legislatures being allowed not only to place their views before the Commission, but also to offer their criticisms on the report before the joint Parliamentary Select Committee, proved ineffective. For a few days, but for a few days only, the country seemed unanimous in condemning the composition of the Commission Mussalmans the untouchab[illegible] [illegible] and [illegible]

growing section of the community at large found on cool consideration that it would be better to co-operate with the Commission.

Congressmen, however, thought otherwise. Boycott of Commission was the breath of their nostrils; Hindu-Muslim unity, their fond dream and the drafting of a Swaraj constitution formulating their political demands, their pastime. Attempts had already been made at Delhi and Calcutta to solve the communal tension, but the formulae evolved were acceptable neither to the Hindus nor to the Mussalmans. With boycott, unity and constitution making as their war-cry, Congressmen met at Madras during Christmas under the presidency of Dr. M. A. Ansari. As President-elect he had made statements which indicated his future policy, so that his presidential speech disclosed nothing new.

He deplored communal dissensions and asked both communities to accept the decision of the Congress. Seeking to make the Congress a truly national body he invited all communities and political parties to join it and urged those who desired to go to the Councils to form one people's Party of opposition on the basis of the Congress programme. He advocated a boycott of the Commission demanded a round-table conference of Indian and British representatives to settle India's future and recommended the preparation of a constitution and its submission to a National Convention.

Of the many topics discussed informally and at the Working Committee and the Subjects Committee, the Hindu-Moslem unity proposals stand out prominent. It was a sure sign of the state of feeling that prevailed then and prevails now as these lines are being written that the Hindu Mahasabha leaders were opposed to the creation of communal provinces as a condition attaching to the introduction of joint electorates. A definite breach was imminent, but thanks to Mr. Gandhi a compromise was reached. The resolution as finally adopted by the open Congress stipulated the introduction of joint electorates with reservation of seats, the constitution of Sind, Karnatak, Andhra and Utkal as separate provinces and the introduction of the forms in the N. W. F. Provinces. On the question of music outside mosques and cow slaughter each community should respect the other's feelings without prejudice to the rights of the respective communities. Of course the Congress decided on a thorough boycott of the commission including hartals and mass demonstrations. As expected, the Working Committee was asked to draft a Swaraj constitution in consultation with other bodies and to place it before a National Convention to be convened at Delhi not later than March 1928. By far the most spectacular of the resolutions was that which declared the goal of the Indian people to be complete national independence which was carried after considerable opposition.

The National Liberal Federation.

The definite breach between the moderate and extremist elements in the Congress at its special session in Bombay in August 1918 (*vide* 1919 edition of this book) witnessed the birth of the National Liberal Federation which has, since then, been the platform of Indian moderate leaders. It held its first session in Bombay in 1918, Sir Surendranath Banerjee presiding. The Federation adopted for its creed the old Congress formula which was set aside by the Nagpur Congress.

Those who had held the Federation in high esteem for its moderation, sobriety and balanced judgment suffered a rude shock in 1927 when the Liberal body and its leading lights proved the saying, "If you scratch a Liberal you will find an extremist." Liberal leaders b[illegible] bye to their avowed principle of co-[illegible] with the Government when they express[illegible] selves in favour of a boycott of t[illegible] Commission set up to inquire into the and measure of the country's political advance. About the middle of the year the rumour got abroad that Indians would not be represented on the Commission. Sir Tej Bahadur Sapru started a controversy protesting against such a step. Academic discussions in the Press on the merits of the procedure went on for several weeks until the Viceroy invited all the leaders of the country to a personal interview at Delhi.

His advice fell on deaf ears and his announcement met with adverse criticism. He alluded to the difficulties of securing adequate representation of Indians on the Commission without making it unwieldy, drew attention to the fact that the Parliamentarians who constituted the Commission were impartial and able men and [illegible]

tunity of placing its views on the Commission's report before the Joint Select Committee of Parliament. ... but Indians had been excluded from the Commission and it was an insult to the country's honour The Liberals, therefore, would have nothing to do with it. They refused to be convinced by the arguments advanced by Lord Birkenhead and others in Parliament in support of the composition of the exclusively Parliamentary Commission. Liberal leaders had committed themselves and the Federation foll- owed them.

An interview given by Lord Sinha was pub- lished a few hours before the session actually opened in Bombay under the Presidency of Sir T. B. Sapru The danger of non-co-operation was emphasised by Lord Sinha, but Sir Chimanlal Setalvad, Chairman of the Reception Committee, declared: "The scheme as announced is un- acceptable and we cannot take any part in it" He, however, added, "If fresh proposals or modifications are made, we are prepared to consider them with an open mind." Sir Tej Bahadur declared, "The Liberal Party cannot be a party to anything which is inconsistent with the honour and self-respect of India and her moral right effectively to ... in the determination ... in its zeal for ... can it forget its duty to the country in a crisis of this character ... Government Neither our self-respect nor our sense of duty to our country can permit us to go near the Commission."

An attempt on the part of a section of Liberals to delete the threat of boycotting the Com- mission from the principal resolution was stifled and a show of unanimity was maintained An amendment was on the point of being moved in the open session, but was withdrawn. Sir P. S. Sivaswami Iyer's resolution which was adopted "unanimously"—the opponents re- maining neutral—ran: "The National Liberal Federation is strongly of opinion that the official announcement made about the constitu- tion of the Statutory Commission and the functions of the Committees of the Indian Legislatures is unacceptable, as it flagrantly denies the right of the Indian people to partici- pate on equal terms in framing the future con- stitution of the country, and that the Legisla- tures and Indians throughout the country should have nothing to do with the Commission at any stage or in any form." Sir Moropant Joshi Pandit H. Kunzru and Mr. C. Y. Chintamani were among the supporters of the resolution The Federation also appointed a Committee to formulate, in co-operation with similar commit- tees of other organisations in the country, a scheme for responsible Government. The usual resolution urging communal unity and advocating joint electorates with reservation of seats for important minorities was adopted. The Federation endorsed a manifesto drafted by the leaders which, while recognising Britain's right finally to settle India's constitution, reaf- firmed the latter's claim to a permanent and durable constitution capable of automatic growth In winding up the proceedings, the President made a long-winded statement roundly accusing Government of non-co-operation with the constitutional party and declaring that the Liberals would have nothing to do with the Commission unless and until the constitution is so revised as to include an equal proportion of Indians and Englishmen.

The Moslem League.

The All-India Moslem League came into being in 1906 out of the universal desire among leading Mussalmans at that ti... organisation to ... With a view t... entation in th... under the Minto-Morley scheme of constitu- tional reforms then under discussion, Indian Moslems who had been hitherto keeping aloof from politics organised the League. Its original objects were the promotion of loyalty to British Government, the protection of political and other rights of Mussalmans and to place their needs and aspirations before Government in temperate language and to promote inter-com- munal unity without prejudice to the other objects of the League. Moslem opinion slowly advanced ... 1913 the securing of self- ... the British Empire was in- ... The League was a power- ... body in 1916 and 1917, and what is known as the Lucknow pact of com- munal representation arrived at between the League and the Congress in 1916 was bodily incorporated in the Government of India Act, 1919. The birth of the Khilafat Committee however overshadowed the League which from 1919 had almost disappeared till April 1923 when it met for a brief period under the pre- sidentship of the late Mr. Bhurgri, but had to be adjourned for want of a quorum. In 1924, however, some influential Moslem leaders like

Mr M. A. Jinnah thought that the Khilafat Committee's functions having ceased in view of the Turkish deposition of the Khalifa decided to revive the League which met under Mr. Jinnah's chairmanship at Lahore in May 1924. The Lahore session practically did nothing else save to reorganise the scattered branches of the League.

The Double session.—The 1925 and 1926 sessions of the League were noted for their virility and liveliness. The League gained in strength, owing largely to the increased loyalty of Mussulmans to their communal organisation, which has followed the rapid growth of the Hindu Mahasabha, the rival Hindu communal organisation. A feeling of separatism, distrust and even positive ill-will grew up between the two communities which led to inter-communal riots, which in turn aggravated the inimical relations—a veritable vicious circle. Proportionate distribution of the loaves and fishes of office, on the political side, and the questions of the Hindus playing music before mosques and Mahomedans killing cows, on the religious side, constituted the points of difference. Suspicion was in the air and communal disturbances were of frequent occurrence. It was in this state of affairs that Mr Jinnah and a few Mahomedans met at Delhi early in the year and offered in the name of the Muslim community to surrender its right to separate electorates in any future scheme of representative government, provided certain seats were reserved for the minority community and Sind was constituted a separate province and reforms were introduced in the N. W. F. Provinces and Baluchistan. There was considerable opposition to this both on the part of the Hindus and the Mahomedans. In spite of this and several other paper schemes and compromises and attempts at communal unity, riots continued to break out and heads to be broken.

The domestic affairs of the League were equally confusing. Sir Mahomed Shafi, who was elected to preside over the 1927 session, agreed to retire in favour of H. H. the Aga Khan. The latter provisionally accepted the presidency but on arrival in India declined it. Meanwhile the Statutory Commission on Indian Reforms had been set up with no Indians on it and a section of the Mahomedans led by Sir Ali Imam and Mr. Jinnah was for boycotting the Commission, while an influential section, following Sir Mahomed Shafi and Mr. A. K. Ghuznavi, advocated co-operation. The boycotters thought that, if the session of the League was held at Lahore, the stronghold of Sir Mahomed Shafi the decision might go against them. A meeting of the League Council was, therefore, called by the Secretary—who, by the way, had resigned before calling the meeting—to select the venue of the session and the president. Amid the protests of those who favoured Lahore the Council decided to hold the session at Calcutta. Sir Mahomed refused to abide by the decision with the result that Mr. Jinnah and his supporters, including Sir Ali Imam, Sir Abdur Rahim and others, held their own session at Calcutta under the presidency of Maulvi Mahomed Yakub passed a resolution boycotting the Commission, adopted the Congress resolution as the basis of inter-communal unity and finally disowned the Punjab branch of the League for the "offence" of refusing to abide by a decision which was held to be "ultra vires." Simultaneously with the Calcutta session, the All-India Muslim League met at Lahore, in keeping with the original decision of the League Council Sir Mahomed Shafi presiding. It was decided to co-operate with the Commission, the Congress formula of communal peace was rejected because it did not properly represent Hindu opinion and agreement to give up separate electorates was made conditional upon the Hindus undertaking to accept their conditions regarding Sind etc. Since the disaffiliation of the Punjab—which was a re-enactment of an exactly similar episode ten years ago—a move is on foot to form a Punjab Provincial League which may be acceptable to the Jinnah League.

The Khilafat Committee.

The Central Khilafat Committee owed its origin to the reticence shown by the All-India Congress Committee in 1920 to the question of the Khilafat and Non-co-operation. Messrs. Gandhi and Shaukat Ali started this organisation with a view to educative propaganda throughout the country and, if possible, to capture the Congress. The object of the Committee was stated to be the righting of the Khilafat "wrongs." As a result of intensive propaganda mainly led by Mr. Gandhi himself, prominent Indian publicists supported the view that the Indian Moslems being deeply [illegible] over the [illegible] n of the Ho y [illegible] of Islam, had a right to expect the [illegible] in [illegible] their rights Soon after, the Madras Khilafat Conference under the chairmanship of Mr. Shaukat Ali unfolded a programme of progressive non co operation and appealed to the country for support. The Khilafat Committee, with the huge funds at its disposal, was able to draft in a large number of delegates to the Calcutta special Congress in 1920 when the non-co operation programme was accepted by that body with two more objects added to it, namely, the obtaining of Swaraj and the righting of the Punjab wrongs.

With the deposition o[illegible] the Khalifa by the [illegible] and the [illegible] of the Moslem [illegible] the [illegible] ttee [illegible] have been [illegible] y [illegible] y the Com

m tee ent a d p tat n Ne o ne ne a d settle the dispute between the warring elements. Though the Government of India were willing to permit a deputation of the Committee to Turkey, the Turkish Government did not quite like the idea which had consequently to be abandoned.

The 1925 session of the Khilafat Conference was rendered lively by Mr Hazrat Mohani whose speech strongly criticising Sultan Ibn [illegible] The resolu- [illegible] r the Pre- [illegible] ondemned [illegible] League's [illegible] at if the Turks went to war on the latter issue the Conference would deem it its duty to help them

Since then one heard little about the public activities of the Committee, although many of its domestic quarrels engaged the attention of the public. Funds, however, continued to be collected for the "activities" of the Committee which could hardly be specified. Things dragged on until the latter half of 1927, when the leaders found the Khilafat organisation a useful tool for purposes of their propaganda for boycotting the Statutory Commission on Indian Reforms. The visit to India of the King and Queen of Afghanistan lent some importance to the Khilafat Committee which took a leading part in welcoming Their Majesties. Flushed with the enthusiasm which characterised their p An la o by t w y after the removal of the Khalifa from his e a t d position was proclaimed "King of Islam"—the Khilafatists proceeded to Madras to attend the All-India Khilafat Conference. Held, as it was in the Congress camp, it bore visible traces of the extremist influence of the bigger political body Indeed the professional politicians so arranged things that the Khilafat organisation, professing to speak in the name of the Mussulmans of India,—and that at a time when the All-India Muslim League itself was rent asunder by a schism—resolved to boycott the Simon Commission. The hollowness of its claim to voice the opinion of the community was proved by the first words of the President of the session, Moulvi Mahomed Shafi, M.L.A., who pleaded for keeping the Khilafat Committees "alive" Mr. Mahomed Ali urged the need of reviving the Khilafat activities, namely, "the religious social, political, educational and economic uplift of the community and the safe-guarding of the interests of Islam throughout the world The Conference welcomed the Afghan King's suggestion to form an Asiatic League, advocated the revival of the Khilafat movement, approved of the efforts made to establish Hindu-Muslim unity and, above all, questioned Britain's right to settle India's destiny and decided to boycott the Reforms Commission Thus ended the neatly stage-managed one-day session of the Conference.

The Indian Legislature.

The Annual Delhi session of the Indian Legislature in 1927 commenced in the new Council House on 19 January, H. E. the Viceroy having on the preceding day opened that fine pile of new buildings. The first business was the swearing in of members after the recent general election and the next the election of President and Vice-President. Mr. V. J Patel, who had been returned unopposed by the Gujarat constituency in which his home is situated, was re-elected to the chair and Maulvi Mahomed Yakub was elected Vice-President in succession to Diwan Bahadur T. Rangachariar, who had not been returned to the new House.

His Excellency the Viceroy delivered an inaugural address in the Assembly Chamber on 24th January. Lord Irwin informed the Legislature [illegible] a brigade of [illegible] to Shanghai, [illegible] ndia had in [illegible] with convention [illegible] ted to this step before a decision to adopt it was taken by His Majesty's Government. His Excellency specially dwelt in his address with the Indian constitutional problem. He said he was not infrequently told that the British problem in India was psychological and that many of its difficulties would disappear if once India could be convinced that the British people were sincere in their professed intention of giving India responsible self-government To carry such conviction to those who remained unconvinced was, His Excellency recognised, a very difficult task, but he told the Assembly that the very instincts of the British left them no alternative but to open to India the path in which they had themselves been pioneers and along which they had led and were still leading their people wherever the British flag was flown. He also pointed out that the British people had pledged before the world their intention to carry out the promises contained in the historical [illegible] t of August, 1917 The Viceroy

reiterated that the restraints placed upon the Bengal political detenus had no relation with the question of constitutional advance, for the maintenance of law and order was the inalienable duty of every Government, however constituted. The detenus were kept under restraint in order to prevent terrorist outrages and would be released the moment Government were satisfied that their release would not defeat this object.

The Viceroy specially referred to the charge of insincerity based on the method of approach which the British Parliament had adopted towards the problem of Indian constitutional development and declared that Parliament was not inspired by any selfish desire to retain power but by a genuine belief that the circumstances of history had laid upon it the duty of guiding and assisting India and by a sense that it would be definitely defaulting on these obligations if it surrendered its charge before it was satisfied that it could safely be entrusted to other hands. "When Parliament invites India to co-operate in the working of the Reformed Constitution it does not invite any Indian party, as it was authoritatively stated the other day, to lay aside for the time being its demand for swaraj; it does not desire that any part or individual should forego the freest and fullest right of criticism and constitutional opposition to any action that Government may take but it does invite Indian political parties to show whether or not the ultimate structure which Parliament is seeking to erect is one suitable to Indian conditions and Indian needs. If it sees any large section of Indian opinion, however vocal in its desire to further the cause of Indian self-government, steadily adhering to the determination to do nothing but obstruct the machinery with which India has been entrusted, Parliament is more likely to see in this evidence that the application of Western constitutional practice to India may be mistaken than proof of the wisdom of the immediate surrender to India of all its own responsibility." Refusal to play the game because the players did not like the rules would have little effect on Parliament's mind, which would on the other hand certainly be influenced if it found legislatures exercising responsibilities, albeit limited, in a spirit of service and tacitly assuming always that their real responsibility was greater than that expressed in the statute.

The question of **political detenus** has been taken up in the Assembly before His Excellency's address because one detenu, Mr. Satyendra Chandra Mitra, had been elected to the House while a prisoner under the Bengal Criminal Law Amendment Act, the Act which was passed to replace the Bengal Ordinance, under which a large number of Bengal politicians were placed under restraint by Lord Reading. Pundit Motilal Nehru, as leader of the Congress party, who were present in strength, moved the adjournment of the House on 21 January to call attention to what he termed Government's refusal to allow a regularly elected member to take his seat. He pointed out that detention under the Bengal Act or the Regulation III of 1818 was not a disqualification for election and he asked what would happen if such an incident as he was referring to [illegible] in England.

The Home Member showed that the Indian Legislature had not the same code of powers, privileges and immunities as the legislatures in some other parts of the British Empire and a strong and influential committee which had considered the point concluded that such possibly ultimate provisions would at the present time be premature, while the Legislature itself only a year ago passed a Bill to regulate such questions and specifically and only exempted "members of any legislative body constituted under the Government of India Act of 1919 from liability to serve as jurors or assessors and from arrest and detention in prison under civil process at the time of meeting of such body or of such committee thereof and during the fourteen days before and after such meeting or sitting." The Home Member referred to the incarceration of Messrs. Dillon, Parnell and others under the Protection of Prisoners and Property Act, 1881, and said it had never been contended that that was a breach of the privilege of the House of Commons. The Congress party pressed the matter to a division and with the help of the parties on the inner left and in the left centre secured a majority of 16.

The general question of political detenus was raised on 3rd February by a Congress member's resolution for the repeal of Regulation III of 1818 and similar enactment and for the release of detenus on amnesty. Pundit Motilal Nehru moved an amendment demanding that all detenus be released or brought to trial. The Home Member reminded the House that such an amnesty as now demanded was given in 1920 with the result that there was a recrudescence of revolutionary crime. He showed how crime of the kind had continued and increased until the passing of the Bengal ordinance of 25th October 1924, since when revolutionary crime had practically ceased, though the recent discovery of bombs in Calcutta showed that it was only scotched and not killed. He quoted H. E. the Viceroy's recent statement to the House on the subject and reiterated it as an expression of Government's policy. The debate was continued at considerable length and with some wild speeches, one speaker declaring that if he had the power he would stir up every young man to become a revolutionary conspirator and the amendment was finally carried by a majority of 13.

Movements of and efforts to move, the adjournment of the House developed into a habit. Mr. Srinivasa Iyengar, President of the Congress, gave notice of such a motion to call attention to the despatch of troops to China, a step which had come under much criticism. The President ruled it in order, but the Governor-General disallowed it under the Rule which prohibits discussions affecting relations with any foreign State. On 2nd February an attempt to move the adjournment on the ground that the non-publication of the Fiji Committee's report was an urgent matter was ruled out by the President because the report was three years old. On 8th February a motion of the kind criticising the Government's ordering of business for the session was carried by 7 votes. On 6th February [illegible] [illegible] the B. N. R. strike at Kharagpur was talked out.

The main items of **legislative business** during the session were four in number, namely, a new steel Protection Bill, a Bill providing for the maintenance of the rupee ratio at 18d gold, the railway budget and the general budget. The current bounty-cum-tariff protection of the Indian steel industry being due to expire on 31st March 1927, Government instituted a timely inquiry by the Tariff Board with a view to the settlement of future protective measures and the Board reported before the Delhi session began recommending a new system of protection for a period of seven years from 1st April 1927, the protection to be by means of increased ... duties rather than by the continuation of ... be too costly to ... luced a new Bill ... mendations and ... at the end of the ... oteworthy feature for present purposes was its differentiation between Standard and Non-Standard steel, which in effect is the same as differentiation between British and non-British steel, British steel, being Standard and non-British non-Standard. The political party members inveighed against this differentiation on the ground, as they alleged, that it constituted an effort to give British steel makers' preference, an allegation which Government plainly denied. The Select Committee introduced into the Bill a new provision enabling Government to increase but not to reduce the duties on British steel, so as to ensure the continuance of effective protection, and the Congress party, leading the attack against what was called preference to Britain, moved to refer the Bill back to Committee. The effort was defeated in the division lobby after two days' debate and after another two days' debate was carried without amendment.

The annual **Railway Budget** showed that the final figures for the year 1925-26 were better than expected but that the revised estimates of the financial results of 1926-27 were disappointing, since there had been an appreciable decrease in earnings from passenger traffic and a still larger decrease in earnings from goods traffic. This latter falling off was due to severe floods in Burma and elsewhere to partial failure of the Punjab cotton crop and to the late movement of cotton in Bombay and elsewhere. Hence, instead of the originally estimated net surplus of 371 lakhs rupees the surplus now expected was 594 lakhs. The figures made reductions of fares and freights impossible. A memorandum circulated with this budget showed that if the Bill for fixing the rupee ratio at 18d were amended so as to reduce the rupee to 16d the net railway receipt would be reduced by 8½ crores per annum and that the reduction in 1927-28 would exceed 3 crores and convert the estimated surplus of 162 lakhs into a deficit of 150 lakhs. The main criticism of the budget was political, namely in support of the demand for the appointment of Indians as members of the Railway Board. The Government reply was that the Board members are technical experts and that there are yet no Indians of the superior railway staff sufficiently knowledgeable and experienced for appointment. A bad feature of the debates was the efforts of the political parties to support their Indianisation demand by contentions that the Board as at present constituted was guilty of gross mismanagement, but the attack was a grotesque misfire because its main allegation was in regard to a statement by the Chief Commissioner that at one period of the current year there was a surplus of 30,000 wagons. The critics fastened on to this as an example of unbusinesslike extravagance, though the word surplus is a technical expression concerning the day-by-day reserve of rolling stock and in the present case it only meant that on a certain day the traffic returns showed that owing to the slackness of trade noted in the financial statistics wagons to the number mentioned were unemployed. The House carried by 59 votes to 52 a motion to cut the Railway Board vote on the ground of these surplus wagons.

The General Budget for the ensuing financial year was presented to both Houses of the Legislature on 28 February and for the fourth year in succession showed a surplus, the amount of the surplus this time being 370 lakhs rupees, a balance which would if the rupee were reduced to 16d be converted into a deficit of 158 lakhs. The report on the Ways and Means position was gratifying. It enabled Government to calculate on financing their entire capital programme, involving an expenditure of 27 crores rupees, and also that of the Provincial Governments and to redeem maturing debt with under 10 crores of new money, which it was hoped would be forthcoming on favourable terms. Government were further able to calculate on the avoidance of external borrowing as had been the case since 1923. The Finance Member proposed various changes in the import tariff which at a cost of 6 lakhs loss in revenue would considerably ease the movement of trade, and thereafter concentrated the bulk of the surplus to reduction of Provincial Contributions. These were accordingly wiped out in perpetuity except as regards 181 lakhs and that amount, Sir Basil Blackett said, should be remitted for the ensuing year by the utilisation of part of the surplus revealed by the final figures of revenue and expenditure for the financial year 1926-27.

The particular ground for criticism of Government which the political parties in the Assembly found in the Budget scheme lay in the interaction of the ratio question and the Budget upon one another. As the Budget stood or fell with the 18d. ratio, the advocates of 16d. condemned Government for placing the Legislature on the horns of a dilemma by making it choose between the remission of Provincial Contributions and the lowering of the rupee. The Budget was finally passed in the form in which it was presented subject only to comparatively minor amendments.

The voting of demands for grants was as usual made the occasion for a debate on the general constitutional question. Mr. M. R. Jayakar, a new comer in the Assembly and a Responsive ... of the demand ... ng expenses of ... Council. The debate which followed served to emphasize the political communal differences existing between Hindu and Muslim and otherwise concerned the inconveniences of the existing constitution rather than steps which could usefully be taken

to improve it. There was from the unofficial benches much criticism of the extent to which the Executive Government could disregard the majority votes of the Assembly and of the sense of irresponsibility which this could be held to stimulate on the unofficial side of the House. The Home Member, Sir A. P. Muddiman, in his reply specially dealt with the latter complaint and said: "No constitution and no country can be run where the Legislature is in permanent conflict with the Executive—something has got to break somewhere and that is the justification and the real justification for the existence of these residuary powers. And that brings me on to the further point, which is that the more you force on a Government constituted as we are the exercise of these residuary powers conferred on that Government the more you weaken yourselves and the more you weaken us........ You make the exercise of residuary powers a thing which you yourselves regard as a very small matter and, what is worse, you deprive the Government which exercises them of their corresponding sense of the gravity of exercising those powers in the ordinary course of administration." The Jayakar motion was carried by a majority of 9 votes.

The Assembly, on the Finance Bill, carried by 50 to 48 a Swarajist motion to reduce the **Salt Tax** by half. This would have upset the whole Budget scheme. The Council of State restored the Bill to its original condition and the Assembly concurred in the amendment by 52 to 41. The Assembly divided equally on the Budget proposal to abolish the export duty on hides and the President gave his casting vote in favour of the maintenance of the status quo.

The Rupee Ratio Bill came on for effective debate and vote during the negotiation of the Finance Bill. Its main provision was to fix the rupee at a ratio equivalent to 8.47512 grains gold, that is the equivalent of 18*d*. to the rupee, and the efforts to reduce the ratio to the equivalent of 16*d*. gold produced a keener fight than any on the Budget. The leaders of the movement for the depreciation of the rupee were Sir Purshotamdas Thakurdas and Sir Victor Sassoon, the former following in this respect his dissent from the majority of the Royal Commission on whose recommendations the Bill was based and Sir Victor being the founder and leader of the Indian Currency League formed for the prime purpose of compelling Government to reduce the rupee level. The critical vote resulted in a victory for Government by 68 votes to 65, the largest division lists ever recorded in the history of the Assembly. Other divisions were forced by the same opponents of the Bill, but the Government majority increased as they proceeded.

There was a noteworthy debate representing keen interest on the part of unofficial members of the Nationalist Party on the development of civil aviation in India and the session witnessed the passing or advancement of a quantity of official legislation of other than first rate general interest. The Gold Standard and Reserve Bank Bill, implementing the recommendations of the Royal Commission on Currency for the institution of an Indian Reserve Bank, was introduced and referred to Select Committee.

Private members' resolutions were interesting for the passing of a demand for the establishment of a Supreme Court in India, so as to avoid appeals to the Privy Council—though this was only carried by a majority of one vote, for the considerable volume of opinion which they revealed in favour of the redistribution of provincial boundaries so as to give more homogeneous provinces and for the insistence of the Council of State on tightening of film censorship so as to provide better protection of the morals of the people. The parties on the left of the Assembly desired to move a resolution reiterating their demand for the immediate grant of full r[illegible] were [illegible] and t[illegible] important unofficial resolution passed by the Council of State was for the appointment of an inquiry into road development throughout India and to this Government assented. Another moved in the Council of State by Sir Sankaran Nair recom[illegible] further constitut[illegible] settlement of the [illegible] of common electorates. This met with strong Muslim opposition and was thrown out. With it went a Muslim amendment insisting on communal electorates as a *sine qua non* of further progress.

[illegible] autumn session [illegible] was the passage [illegible] of the Cotton [illegible]isions were for the free admission of imports of mill stores and machinery, a tariff amendment estimated to cost the central exchequer a loss of 84 lakhs of Customs revenue per year, and the imposition of a new discriminating duty on yarn imports so as to assist Indian spinning mills in face of [illegible] H. E. [illegible] than [illegible] and Muslim communal leaders to compose their differences and offering to assist them with his personal help if representations inviting him so to do were addressed to him. The communal leaders had already summoned a conference on the problem for the following few days and were unprepared to let the initiative pass out of their hands. Advantage was therefore not taken of His Excellency's offer. (The unofficial conference failed.)

Racing.

Calcutta.

Indian Grand National. Distance about 3 miles.—

Mr. J. Mein Austin's More Sanity (10st. 11lbs.), Capt. Leetham 1
Mr. J. D. Scott's Honolulu (10st. 5lbs.), Mr. Mitchell Jones 2
Lt.-Col. Fraser Hunter's Tostan (9st. 5lbs.), Seastream 3
Mr. H. Birkmyre's Pretender (9st. carried 9st. 2lbs.), Elliott 4

Won by three lengths; ten lengths; fifteen lengths. Time.—6 mins. 19 secs.

New Year Plate. Distance 6 furlongs—

H. H. the Aga Khan's Dariai II (8st. 12lbs.), A. C. Walker 1
Mr. A. Curlender's Corhali (7st. 11lbs.), Rosen 2
Mr M. Yoonu's Ballina Breeze (8st. 3lbs.), Hulme 3
Mr. P. B. Avasia's Fille D'Or (9st. 1lb.), O'Brien 4

Won by three-quarter length; a head, one and a half lengths Time.—1 min 13 3-5 secs

Cooch Behar Cup. Distance 1 mile, 3 furlongs—

Hajee Sir Ismail Sait's Critical (7st. 4lbs.), J. Brown 1
Mr. Bandally Mahomed's Jan (7st. 4lbs.), Mariand 2
Mr. J. C. Galstaun's Pensacola (8st. 2lbs.), Dobie 3
Mr. Eve's Katerfelto (7st 6lbs.), Rosen .. 4

Won by one length; two and a quarter lengths. Time.—2 mins. 20 4-5 secs.

Carmichael Cup. Distance $1\frac{1}{2}$ miles—

Mr. T. M. Thaddeus' Aborigine (6st. 10lbs), Archibald 1
H. H. the Maharaja of Kolhapur's Green Finch (8st. 10lbs), Stokes.. 2
H. H. the Aga Khan's Quincy (9st 6lbs) A. C. Walker 3
Mr. Pannick's; Keep It Dark (8st. 3lbs), L. Brown 4

Won by 1 length; $1\frac{1}{4}$ lengths; $2\frac{1}{2}$ lengths. Time.—2 mins. 6 2-5 secs.

The Governor's Cup. Distance $1\frac{1}{4}$ miles—

Mr. C. Howarth's Bonnie Lad (8st. 1lb.), Hutchins 1
H. H. the Maharaja of Kolhapur's Minority (7st. 3lbs.), Stokes 2
Mr. Bundally Mahomed's Jan (7st 7lbs.), A. D. Walker 3
Mr. Pannick's Keep It Dark (8st. 4lbs.), L. Brown 4

Won by 2 lengths; $1\frac{1}{2}$ lengths; 1 length. Time.—3 mins. 1 sec.

Macpherson Cup Distance $1\frac{1}{4}$ miles.—

Haji Sir Ismail Sait's Critical (7st 13lbs.), J. Brown 1
Mr. Pannick's Keep It Dark (8st. 3lbs.), L. Brown 2
Mr Bundally Mahomed's Jan (7st. 9lbs.), A. Dwacker 3
Mr. J. C. Galstaun's Dark Orient (7st 9lbs), Dobie 4

Won by $\frac{1}{2}$ length; $2\frac{1}{2}$ lengths. Time—2 mins. 33 1-5 secs

Beresford Cup. Distance $1\frac{3}{4}$ miles.—

Mr. B. E. G. Eddi's Spring Running (7st. 7lbs.), Parker 1
Mr. H. Dees' Snowdrift (8st 10. lbs.), Ponce.. 2
Messrs. Edmonston's and Muer's Mandarin (8st. 1lb.), Hutchings 3
Mr. Pannick's French Bean (9st.), L. Brown .. 4

Won by a neck; $1\frac{1}{2}$ lengths; $1\frac{1}{2}$ lengths. Time—3 mins. 2 2-5 secs.

Burdwan Cup. Distance about $1\frac{3}{4}$ miles.

Mr. E. Dee's Blacktoi (10st 7lbs), Elliott . 1
Mr H. G. Gregson's Stronsay (10st 3lbs.), Venall 2
Mr. E. Dee's Snowdrift (11st 3lbs.), Jackson 3
Capt. W. I. Lutham's More Sanity (10st 7lbs.), Owner 4

Won by 2 lengths, $1\frac{1}{2}$ lengths, $\frac{1}{2}$ length. Time—3 min, 28 2-5 secs.

Mayfowl Cup. Distance 1 mile —

Mr. J. C. Galstaun's Dark Orient (7st 12lbs.), A. C. Walker 1

Mr. P. B. Avasia's L S. D. (8st 9lbs.), Herbert 1

Miss M. Prophit's Golden Trace (7st 11lbs.), Balfour 3

Contributions to philological and philosophical journals. *Address:* St. Xavier's Coll., Bombay.

The Calendars.

A full Calendar will be found at the beginning of this book. Below are given details of the other Calendars in use in India.

The *Jewish* Calendar is in accordance with the system arranged A.D. 358 The Calendar dates from the Creation, which is fixed as 3,760 years and 3 months before the beginning of the Christian Era; the year is Luni-solar.

The *Mohammedan*, or era of the Hejira, dates from the day after Mahomet's flight from Mecca, which occurred on the night of July 15, 622 A.D. The months are Lunar.

The *Fasli* year was derived from a combination of the Hejira and Samvat years by the order of Akbar; it is Luni-solar. The *Bengali* year seems also to have been related at one time to the Hejira, but the fact of its being Solar made it lose 11 days each year.

The *Samvat* era dates from 57 B.C., and is Luni-solar. The months are divided into two fortnights—*sudi*, or bright, and *badi*, or dark. Each fortnight contains 15 tithis, which furnish the dates of the civil days given in our calendars.

A WONDERFUL ADVANCE

OF GREAT IMPORTANCE TO

[FAR]MERS, LANDOWNERS and ESTATE MANAGERS.

[THE] CULTIVATING TACKLE THAT HAS REVOLUTIONISED THE WHOLE AGRICULTURAL WORLD.
Cultivating with

McLAREN

Patent Diesel Oil

ENGINE WIND-LASSES

(Cable System)

[Cost] per Acre One-third that of any other system.

[A] Light-Weight High-Speed Diesel Oil Engine with Extraordinary Flexibility.
McLARENBENZ
Diesel Oil Engine

60 B. H. P. at 800 R. P. M

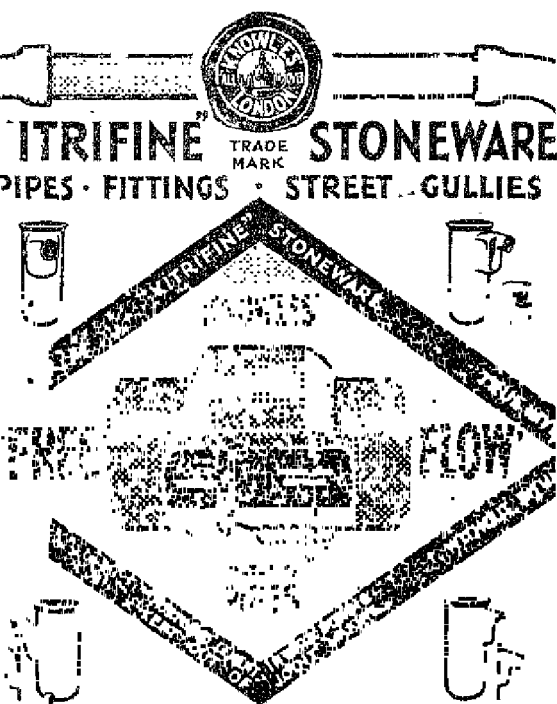
Weights:—

Cast Iron 2,000 lbs. Aluminium 1,600 lbs.

Also a similar Engine, 2 cylinders, 30 B. H. P., weight 1,200 lbs.

These Engines are eminently suitable for ELECTRIC GENERATING, DRIVING PUMPS, DRIVING AIR COMPRESSORS, CRANES, LIGHT LOCOMOTIVES, RAIL COACHES, MARINE PURPOSES, Etc.,

and can also be fitted to our Traction Engines and Ploughing Tackles

[F]uel Consumption Well under ½ Lb. per B.H.P. Hour


[J.] & H. McLAREN, LTD.

BIOGRAPHY.

IN TWO VOLUMES.

THE LIFE OF

SIR PHEROZESHAH MEHTA.

BY H. P. MODY.

The only authoritative work on the life of Bombay's great political leader. The Foreword is written by H. H. The Aga Khan.

Price : **Rs. 12.** By V. P. P. **Rs. 13-3-0.**

Some Press Opinions.

"Mr. H. P. Mody has written a life of Sir Pherozeshah Mehta which is not merely a valuable biography of a great Indian. It is, in addition, an important contribution to the political history of modern India."

Manchester Guardian.

"The biography is something more than the political career of a great Indian leader. It is a clearly related story of the domestic politics of the country."

The Englishman (*Calcutta*).

"The volumes are provided with life-like portraits of Sir Pherozeshah. They are heralded by a brief but most appreciative foreword by His Highness the Aga Khan who gives his concentrated eulogy on this 'Parsi of Parsis.' They are inscribed to the memory of Mr. Mody's deceased brother. To the friends and admirers of the Parsi Knight, they are a possession for ever to the young Indian politician, they constitute a healthy guide. To the general leader they afford a most compendious history of our own times limning the imperceptible process of coalescence of East and West."

The Advocate of India (*Bombay*).

"Mr. Mody's monograph gives the picture with clearness and illumination for the man of affairs to neglect its lesson were a dereliction of sad consequence."

Capital (*Calcutta*).
